Handbook of Chromatography Hamir S. Rathore,1993-05-27 Handbook of Chromatography provides a detailed description of significant aspects of polycyclic aromatic hydrocarbons (PAHs). The sources, occurrence, nomenclature, and carcinogenicity of PAHs are covered, and a comprehensive record of data of sample preparation, detection, separation, determination, and characterization of PAHs by liquid chromatography is presented. The book also summarizes extraction and enrichment procedures (e.g., Soxhlet extraction, ultrasonic extraction, liquid-liquid partitioning); presents data from paper chromatography, thin-layer chromatography, high-performance thin-layer chromatography, and electrophoresis of PAHs; and discusses the methodology and applications of chromatography in analyzing complex aromatic materials. Handbook of Chromatography also provides a PAHs book directory and a list of suppliers of PAHs and HPLC columns. The volume will be an essential reference for analytical chemists, environmental toxicologists, organic chemists, biomedical specialists, and biotechnicians.

Neutrinos And Other Matters: Selected Works Of Frederick Reines William R Kropp,Mildred M Moe,Linda Price,Jonas Schultz,Henry W Sobel,1991-01-22 This volume is a collection of the scientific papers of Frederick Reines. Its publication is to commemorate the 70th birthday, in 1988, of this distinguished scientist. The selected papers here cover many aspects of his work in neutrino physics, astrophysics and conservation law tests. They have been divided into logical groupings, each introduced by a leading authority in that field, who helps the reader to see the reprinted articles with a better historical and scientific perspective.

First Observation of Coherent Elastic Neutrino-Nucleus Scattering Bjorn Scholz,2018-10-26 This thesis describes the experimental work that finally led to a successful measurement of coherent elastic neutrino-nucleus scattering—a process proposed forty-three years ago. The experiment was performed at the Spallation Neutron Source facility, sited at Oak Ridge National Laboratory, in Tennessee. Of all known particles, neutrinos distinguish themselves for being the hardest to detect, typically requiring large multi-ton devices for the job. The process measured here involves the difficult detection of very weak signals arising from nuclear recoils (tiny neutrino-induced “kicks” to atomic nuclei), but leads to a much larger probability of neutrino interaction when compared to all other known mechanisms. As a result of this, “neutrino technologies” using miniaturized detectors (the author's was handheld and weighed only 14 kg) become a possibility. A large community of researchers plans to continue studying this process, facilitating an exploration of fundamental neutrino properties that is presently beyond the sensitivity of other methods.

Free Electron Lasers 1997 J. Xie,X. Du,2012-12-02 This volume contains Part II of the proceedings of the conference on Free Electron Lasers, held in Beijing, August 1997. Part I appears in a special issue of Nuclear Instruments and Methods A. The last 20 years has seen different stages of FEL development. In these proceedings the reader will find descriptions of many new facilities, new experimental results, new applications, new theoretical developments and new simulation results. Attention is also focussed on the recent progress in experimental observations SASE. The contributions are from 150 scientists from 13 countries, ensuring broad, up-to-date research results from a dynamic field.

Nuclear Data for Science and Technology Syed M. Qaim,2012-12-06 This book describes the Proceedings of the International Conference on Nuclear Data for Science and Technology held at Jilich in May 1991. The conference was in a series of application oriented nuclear data conferences organized in the past under the auspices of the Nuclear Energy Agency-Nuclear Data Committee (NEANDC) and with the support of the Nuclear Energy Agency-Committee on Reactor Physics (NEACRP). It was the first international conference on nuclear data held in Germany, with the scientific responsibility entrusted to the Institute of Nuclear Chemistry of the Research Centre Jilich. The scientific programme was established by the International Programme Committee in consultation with the International Advisers, and the NEA and IAEA cooperated in the organization. A total of 328 persons from 37 countries and five international organizations participated. The scope of these Proceedings extends to a wide range of interdisciplinary topics dealing with measurement, calculation, evaluation and application of nuclear data, with a major emphasis on numerical data. Both energy and non-energy related applications are considered and due attention is given to some fundamental aspects relevant to the understanding of nuclear data.

Soybean Tzi-Bun Ng,2011-04-26 Soybean is an agricultural crop of tremendous economic importance. Soybean and food items derived from it form dietary components of numerous people, especially those living in the Orient. The health benefits of soybean have attracted the attention of nutritionists as well as common people.

Developments in Geophysical Exploration Methods—3 A.A. Fitch,2012-12-06 One of the themes in current geophysical development is the bringing together of the results of observations made on the surface and those made in the subsurface. Several benefits result from this association. The detailed geological knowledge obtained in the subsurface can be extrapolated for short distances with more confidence when the geological detail has been related to well-integrated subsurface and surface geophysical data. This is of value when assessing the characteristics of a partially developed petroleum reservoir. Interpretation of geophysical data is generally improved by the experience of seeing the surface and subsurface geophysical expression of a known geological configuration. On the theoretical side, the understanding of the geophysical processes themselves is furthered by the study of the phenomena in depth. As an example, the study of the progress of seismic wave trains downwards and upwards within the earth has proved most instructive. This set of original papers deals with some of the more vigorous developments in subsurface geophysics: and it is hoped that it will contribute to the understanding of geophysical phenomena in the solid. The editor thanks the busy workers in the several fields who have made time to produce these contributions.

Laboratory Guide to the Methods in Biochemical Genetics Nenad Blau,Marinus Duran,K. Michael Gibson,2008-05-31 This manual deals specifically with laboratory approaches to diagnosing inborn errors of metabolism. The key feature is that each chapter is sufficiently detailed so that any individual can adopt the described method into their own respective laboratory.
