Mainstreaming Natural Capital and Ecosystem Services into Development Policy Pushpam Kumar, 2019-09-12 This book highlights the latest advances in the science and practice of using ecosystem services to inform decisions for economic development in the context of the developing countries. The development of the ecosystem services paradigm has enhanced our understanding of natural capital as an indispensable form of capital asset along with produced and human capital. This book addresses what could be the possible pathways to mainstream natural capital assets into development policies and what is currently known about the economic values of ecosystem services. A series of innovative tools to help policy makers and planners account for natural capital and ecosystem services in sectoral and macroeconomic policies have been explored and their application at the national and regional scale has been demonstrated. Several detailed case studies are presented in which the understanding of ecosystem services values has successfully informed decisions, including examples from Chile, South Africa, Tanzania, Trinidad and Tobago, Vietnam and the Aral Sea in Central Asia. These provide the critically important insights, lessons learned and means and mechanisms for policy makers to incentivize protection and discourage degradation of ecosystems and the services they provide. Mainstreaming Natural Capital and Ecosystem Services into Development Policy is designed to help decision makers at all levels, including governments, businesses, multilevel development banks and individuals to integrate ecosystems and their services into their decision making.

Responsible Sourcing of Materials Required for a Resource Efficient and Low-carbon Society Lucia Mancini ,Philip Nuss, 2020-11-13 Understanding future supply and demand of raw materials and the associated environmental and social implications is essential to supporting the transition towards greenhouse gas neutrality by 2050. In this Special Issue, we present a range of research papers with a focus on future outlooks of material supply and use, the consideration of associated environmental and social implications, and issues of raw material criticality and a circular economy. These are complemented by an editorial paper that provides, amongst other aspects, an overview of the corresponding policy and institutional framework. Knowledge of materials availability, their use patterns in modern economies, and associated environmental and social trade-offs is essential for informed decision-making in support of the necessary transition towards more resource-efficient and greenhouse-gas-neutral societies in the coming years.

Ecosystem Services Mark Everard, 2021-12-30 Revised and fully updated, this textbook provides a detailed yet accessible introduction to the key aspects of ecosystem services. Ecosystem services is one of the most powerful guiding principles for ecology, biodiversity conservation and the management of natural resources. It provides the basis of assessing the multiple values and services that ecosystems can provide to humankind, including diverse issues such as carbon sequestration, flood control, crop pollination and aesthetic and cultural services. The second edition of Ecosystem Services: Key Issues has been fully revised and updated to address policy and scientific developments, as well as new and emerging issues, such as nature-based solutions, zoonotic diseases and environmental justice. It includes new and updated case studies from across the world and each chapter contains further reading, learning objectives and discussion questions to aid student learning. The book details the historical roots of ecosystem services in the second half of the twentieth century, through initiatives such as the Millennium Ecosystem Assessment, The Common International Classification of Ecosystem Services (CICES) and the United Nations Sustainable Development Goals. It shows how ecosystem goods and services can be categorised and valued in economic as well as non-monetary terms, while also highlighting some of the difficulties and limitations of valuation techniques. The author describes how themes such as systems thinking, social-ecological resilience and natural capital relate to ecosystem services, and how these can contribute to more sustainable and equitable development. This book will be essential reading for students and scholars of ecosystem services, ecology, environmental science, biodiversity conservation, environmental economics, natural resource management and sustainable development. It will also be of use to professionals and policymakers who are looking to integrate ecosystems and their services into their decision making processes.

Green Growth That Works Lisa Ann Mandle, Zhiyun Ouyang, Gretchen Cara Daily, James Edwin Salzman, 2019-09-12 Rapid economic development has been a boon to human well-being, but comes at a significant cost to the fertile soils, forests, coastal marshes, and farmland that support all life on earth. If ecosystems collapse, so eventually will human civilization. One solution is inclusive green growth--the efficient use of natural resources. Its genius lies in working with nature rather than against it. *Green Growth That Works* is the first practical guide to bring together pragmatic finance and policy tools that can make investment in natural capital both attractive and commonplace. Pioneered by leading scholars from the Natural Capital Project, this valuable compendium of proven techniques can guide agencies and organizations eager to make green growth work anywhere in the world.

Redefining Diversity and Dynamics of Natural Resources Management in Asia, Volume 2 Ganesh Shivakoti, Mai Van Thanh, Tran Duc Vien, Stephen J Leisz, 2016-09-01 *Redefining Diversity and Dynamics of Natural Resources Management in Southeast Asia, Volumes 1-4* brings together scientific research and policy issues across various topographical areas in Asia to provide a comprehensive overview of the issues facing the region. *Upland Natural Resources and Social Ecological Systems in Northern Vietnam, Volume 2*, provides chapters on natural resource management in northern Vietnam tied together by the concept that participatory local involvement is needed in all aspects of natural resource management. The volume examines planning for climate change, managing forestland, alleviating food shortages, living with biodiversity, and assessing the development projects and policies being implemented. Without the involvement of local communities, households, and ultimately individual people, the needed action will not be effectively taken. *Upland Natural Resources and Social Ecological Systems in Northern Vietnam, Volume 2*, goes beyond just Northern Vietnam to address the issue of transboundary natural resource management--an issue that Vietnam is dealing with in its relations with northern neighbor, China, and western neighbor, Laos--as well as the transboundary water governance between Pakistan and India in south Asia, with the hope that some of the lessons learned may one day be useful in the case of Vietnam and its neighbors. Provides a multi-disciplinary case study into a complex environmental situation involving government institutions, planning, and practices, using northern Vietnam as the focus. Covers the issues of natural resource management and biodiversity in depth using international case studies. Provides examples of measuring the potential climate change impacts on food security in agricultural regions. Examines topics such as planning for climate change, managing forestland, alleviating food shortages, living with biodiversity, and assessing development projects and policies.

Sustaining Rocky Mountain Landscapes Tony Professor Prato, Dan Professor Fagre, 2010-09-30 Prato and Fagre offer the first systematic, multi-disciplinary assessment of the challenges involved in managing the Crown of the Continent Ecosystem (CCE), an area of the Rocky Mountains that includes northwestern Montana, southwestern Alberta, and southeastern British Columbia. The spectacular landscapes, extensive recreational options, and broad employment opportunities of the CCE have made it one of the fastest growing regions in the United States and Canada, and have lead to a shift in its economic base from extractive resources to service-oriented recreation and tourism industries. In the process, however, the amenities and attributes that draw people to this 'New West' are under threat. Pastoral scenes are disappearing as agricultural lands and other open spaces are converted to residential uses, biodiversity is endangered by the fragmentation of fish and wildlife habitats, and many areas are experiencing a decline in air and water quality. *Sustaining Rocky Mountain Landscapes* provides a scientific basis for communities to develop policies for managing the growth and economic transformation of the CCE without sacrificing the quality of life and environment for which the land is renowned. The book begins with a natural and economic history of the CCE. It follows with an assessment of current physical and biological conditions in the CCE. The contributors then explore how social, economic, demographic, and environmental forces are transforming ecosystem structure and function. They consider ecosystem change in response to changing patterns of land use,

pollution, and drought; the increasing risk of wildfire to wildlife and to human life and property; and the implications of global climate change on the CCE. A final, policy-focused section of the book looks at transboundary issues in ecosystem management and evaluates the potential of community-based and adaptive approaches in ecosystem management.

Transboundary Water Resources: A Foundation for Regional Stability in Central Asia John E. Moerlins, Mikhail K. Khankhasayev, Steven F. Leitman, Ernazar J. Makhmudov, 2007-11-23 The Central Asian republics and neighboring countries are currently experiencing problems related to the availability and efficient/equitable distribution of freshwater. This book contains papers from a NATO-sponsored Advanced Research Workshop that was organized to address these concerns. It addresses the myriad of issues involving shared freshwater among the countries in this region, discussing ecology, law, economics, politics, water policy and integrated water management.

How to Create a Sustainable Food Industry Melissa Barrett, Massimo Marino, Francesca Brkic, Carlo Alberto Pratesi, 2023-10-30 This book presents a practical guide to help businesses navigate the complex topics of sustainability in the food industry. The book takes you on a journey along the food value chain, from farm to fork, exploring key opportunities to increase positive impacts and circularity at each step of the journey. Written by a team of authors with decades of experience in the food industry and academia, it provides guidance on how to analyse sustainability across the value chain and life cycle of a food product and how to design, implement and communicate strategies to customers. Furthermore, the book shows that there are not always straightforward solutions, but rather choices and trade-offs that require an understanding of what is best suited to the product, customers and business in question. It demystifies a variety of topics, such as local sourcing, regenerative agriculture, plant-based protein and the environmental impact of meat production, and draws on a wide range of case studies from across the globe, to provide concrete, real-world examples. While a perfect food system may not exist, informed decisions can go a long way to reshape and transform the food industry as we know it. This book will be of great interest to professionals working in the food and agriculture industries, as well as students and scholars of sustainable food systems and sustainable business.

Capital, Systems, and Objects Richard Thomas Watson, Saji K. Mathew, 2021-08-19 This book provides a set of integrated frameworks—capital, systems, and objects—that transcend managerial or technology hype by focusing on the long-term fundamentals that sustain organizational success, and it contains cases from South East Asia to elaborate this concept. Many organizations are currently addressing two important transformational issues: ecological sustainability and digitization. Sustainability is a goal, an end, and digitization is a process, a means to achieve a goal. This book introduces a flexible model that can be applied to current and future organizational challenges, including sustainability and digitization, because the fundamentals are constant. This book is designed to serve two purposes for the readers: first, to present three conceptual foundations for designing and operating organizations (capital, systems, and objects (section 1)); and second, to provide a reference source for implementing these ideas in your organization (sections 2 and 3). The first section of the book, chapters 1 through 7, sets forth the conceptual foundations. The chapters mix concepts and practical examples to give a new way of thinking about the setting in which one may work many days each year. The second section provides details and associated examples of every one of the thirty-six forms of capital conversion. It also illustrates how the five foundational systems support capital conversion in a variety of ways. Finally, the third section is about measuring capital and systems. The book covers measurement of all types of capital and systems performance and has been written for current and future organizational leaders to change the game and play it more effectively. The book will thus resonate with students of organizational behaviour and leadership strategy, organizational leaders, industry experts, and general readers.

Natural Capital Peter Kareiva, Heather Tallis, Taylor H. Ricketts, Gretchen C. Daily, Stephen Polasky, 2011-04-07 In 2005, The Millennium Ecosystem Assessment (MA) provided the first global assessment of the world's ecosystems and ecosystem services. It concluded that recent trends in ecosystem change threatened human wellbeing due to declining ecosystem services. This bleak prophecy has galvanized conservation organizations, ecologists, and economists to work toward rigorous valuations of ecosystem services at a spatial scale and with a resolution that can inform public policy. The editors have assembled the world's leading scientists in the fields of conservation, policy analysis, and resource economics to provide the most intensive and best technical analyses of ecosystem services to date. A key idea that guides the science is that the modelling and valuation approaches being developed should use data that are readily available around the world. In addition, the book documents a toolbox of ecosystem service mapping, modeling, and valuation models that both The Nature Conservancy and the World Wide Fund for Nature (WWF) are beginning to apply around the world as they transform conservation from a biodiversity only to a people and ecosystem services agenda. The book addresses land, freshwater, and marine systems at a variety of spatial scales and includes discussion of how to treat both climate change and cultural values when examining tradeoffs among ecosystem services.

Applied Concept Mapping Brian Moon, Robert R. Hoffman, Joseph Novak, Alberto Canas, 2011-04-11 The expanding application of Concept Mapping includes its role in knowledge elicitation, institutional memory preservation, and ideation. With the advent of the CmapTools knowledge modeling software kit, Concept Mapping is being applied with increased frequency and success to address a variety of problems in the workplace. Supported by business application case studies, *Applied Concept Mapping: Capturing, Analyzing, and Organizing Knowledge* offers an accessible introduction to the theory, methods, and application of Concept Mapping in business and government. The case studies illustrate applications across a range of industries—including engineering, product development, defense, and healthcare. The authors provide access to a free download of CmapTools, courtesy of the Institute for Human and Machine Cognition, to enable readers to create and share their own Concept Maps. Offering examples from the United States, Canada, Australia, Spain, Brazil, Scotland, and The Netherlands, they highlight a global perspective of this dynamic tool. The text is organized into three sections: Practitioners' Views—supplies narratives, guidance, and reviews of applications from career Concept Mappers Recent Case Studies and Results—presents in-depth examinations of specific applications and their results Pushing the Boundaries—explores what's possible and where the boundary conditions lie *Applied Concept Mapping* facilitates the fundamental understanding needed to harness the power of Concept Mapping to develop viable solutions to a virtually unlimited number of real-world problems.
