*The Clinical Utility of Compounded Bioidentical Hormone Therapy* Engineering National Academies of Sciences (and Medicine),2020 The U.S. Food and Drug Administration (FDA) has approved dozens of hormone therapy products for men and women, including estrogen, progesterone, testosterone, and related compounds. These products have been reviewed for safety and efficacy and are indicated for treatment of symptoms resulting from hormonal changes associated with menopause or other endocrine-based disorders. In recent decades, an increasing number of health care providers and patients have turned to custom-formulated, or compounded, drug preparations as an alternative to FDA-approved drug products for hormone-related health concerns. These compounded hormone preparations are often marketed as bioidentical or natural and are commonly referred to as compounded bioidentical hormone therapy (cBHT). In light of the fast-growing popularity of cBHT preparations, the clinical utility of these compounded preparations is a substantial public health concern for various stakeholders, including medical practitioners, patients, health advocacy organizations, and federal and state public health agencies. This report examines the clinical utility and uses of cBHT drug preparations and reviews the available evidence that would support marketing claims of the safety and effectiveness of cBHT preparations. It also assesses whether the available evidence suggests that these preparations have clinical utility and safety profiles warranting their clinical use and identifies patient populations that might benefit from cBHT preparations in lieu of FDA-approved BHT.

**Beyond the Pill** Jolene Brighten, 2019-01-29 Out of the 100 million women—almost 11 million in the United States alone—who are on the pill, roughly 60 percent take it for non-contraceptive reasons like painful periods, endometriosis, PCOS, and acne. While the birth control pill is widely prescribed as a quick-fix solution to a variety of women's health conditions, taking it can also result in other more serious and dangerous health consequences. Did you know that women on the pill are more likely to be prescribed an antidepressant? That they are at significantly increased risk for autoimmune disease, heart attack, thyroid and adrenal disorders, and even breast and cervical cancer? That the pill can even cause vaginal dryness, unexplained hair loss, flagging libido, extreme fatigue, and chronic infection. As if women didn't have enough to worry about, that little pill we're taking to manage our symptoms is only making things worse. Jolene Brighten, ND, author of the groundbreaking new book BEYOND THE PILL, specializes in treating women's hormone imbalances caused by the pill and shares her proven 30-day program designed to reverse the myriad of symptoms women experience every day—whether you choose to stay on the pill or not. The first book of its kind to target the birth control pill and the scientifically-proven symptoms associated with taking it, BEYOND THE PILL is an actionable plan for taking control, and will help readers: • Locate the root cause of their hormonal issues, like estrogen dominance, low testosterone, and low progesterone • Discover a pain-free, manageable period free of cramps, acne, stress, or PMS without the harmful side effects that come with the pill • Detox the liver, support the adrenals and thyroid, heal the gut, reverse metabolic mayhem, boost fertility, and enhance mood • Transition into a nutrition and supplement program, with more than 30 hormone-balancing recipes Featuring simple diet and lifestyle interventions, BEYOND THE PILL is the first step to reversing the risky side effects of the pill, finally finding hormonal health, and getting your badass self back.

Hormonal Contraception and Post-menopausal Hormonal Therapy IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, 1999 Evaluates evidence for an increased risk of cancer in women using combined oral contraceptives, progestogen-only hormonal contraceptives, post-menopausal estrogen therapy, and post-menopausal estrogen-progestogen therapy. Although the carcinogenicity of these preparations has been extensively investigated, the book stresses the many complex methodological issues that must be considered when interpreting findings and weighing results. Evidence of an association between use of these preparations and positive effects on health, including a reduced risk of some cancers, is also critically assessed. The first and most extensive monograph evaluates evidence of an association between the use of combined oral contraceptives and cancer at nine sites. Concerning breast cancer, the evaluation concludes that, even if the association is causal, the excess risk for breast cancer associated with patterns of use that are typical today is very small. Studies of predominantly high-dose preparations found an increased risk of hepatocellular carcinoma in the absence of hepatitis viruses. Citing these findings, the evaluation concludes that there is sufficient evidence in humans for the carcinogenicity of combined oral contraceptives. The evaluation also found sufficient evidence for the carcinogenicity of some, but not all, combined preparations in animals. Combined oral contraceptives were classified as carcinogenic to humans. The evaluation also cites conclusive

evidence that these agents have a protective effect against cancers of the ovary and endometrium. Progestogen-only contraceptives are evaluated in the second monograph, which considers the association with cancer at six sites. The evaluation found no evidence of an increased risk for breast cancer. Although the evaluation found sufficient evidence in animals for the carcinogenicity of medroxyprogesterone acetate, evidence for the carcinogenicity of progestogen-only contraceptives in humans was judged inadequate. Progestogen-only contraceptives were classified as possibly carcinogenic to humans. The third monograph, on post-menopausal estrogen therapy, considers evidence of an association with cancer at eight sites. Findings from a large number of epidemiological studies indicate a small increase in the risk of breast cancer in women who have used these preparations for five years or more. Studies consistently show an association between use of post-menopausal estrogen therapy and an increased risk for endometrial cancer. Data on the association with other cancers were either inconclusive or suggested no effect on risk. The evaluation concludes that post-menopausal estrogen therapy is carcinogenic to humans. The final monograph evaluates the association between the use of post-menopausal estrogen-progestogen therapy and cancer at four sites. The evaluation of limited data on breast cancer found an increased relative risk observed with long-term use. Data were judged insufficient to assess the effects of past use and of different progestogen compounds, doses, and treatment schedules. For endometrial cancer, the evaluation found an increase in risk relative to non-users when the progestogen was added to the cycle for 10 days or fewer. Post-menopausal estrogen-progestogen therapy was classified as possibly carcinogenic to humans. Concerning post-menopausal therapy in general, the book notes that evidence of carcinogenic risks must be placed in perspective of potential benefits. The prevention of osteoporotic fractures is cited as the best-established benefit. Evidence also suggests that estrogen prevents heart disease and may prevent memory loss and dementia.
