Cryptorchidism F. Hadziselimovic,2012-12-06 Ferment, a sign of progress in any scientific field, has previously been lacking in the area of cryptorchidism, where the only activity has been in improving operative methods. Now, however, profound changes in the care of boys with cryptorchidism are being brought about; ideas are arising from a fresh look at comparative anatomy, and histological and experimental observations are being supplemented by clinical tests made possible by new hormonal agents. The treatment of cryptorchidism begins with its recognition by the pediatrician, who until now has shown little interest because of disappointing results from chorionic gonadotropin administration. As for the surgeon, his bent toward restoration of normal anatomical relationships has kept his attention focused on the development of better surgical technics to bring the recalcitrant testis into the scrotum. Both specialists have avoided the primordial question of why the testis did not descend properly. If this were known they would treat the cause of cryptorchidism, and not be satisfied merely with trying to correct its end result. As one reads this book, one sees that in most patients cryptorchidism is not caused by some anatomical structure blocking the way or by some deformity of the testis interfering with the transport mechanism. Rather, deficiencies in the hormonal environment of the fetus retard the developmental sequences essential to the normal differentiation and descent of the testis. The clinical solution is thus to provide the deficient substances.

*Ovarian Cancer* F. Gentil,A. C. Junqueira,2012-12-06 The incidence of ovarian cancer has progressively increased during the past decade, and its mortality rate has followed a similar course. Conversely, in cancer of the uterine cervix, the mortality rate has diminished. Detection and early diagnosis have been the two responsible factors in achieving the decrease in the number of deaths occurring in cancer of the cervix. The reverse is true in cancer of the ovary: diagnosis as a rule is only established late, when dissemination has already occurred, thus making the control of the disease much more difficult. Clinical staging thus far has not been in use at many centers, and it therefore becomes very difficult to compare results of treatment since we do not know the exact anatomical extent of the disease. Histopathological classification in cancer of the ovary is still a very controversial subject and a uniform terminology is urgently required. Management of patients with cancer of the ovary varies widely from one institution to another. There is no agreement as to how to treat an ovarian neoplasm; by surgery alone, or, by using radiation and chemotherapy as a complement to the operative treatment. In an effort to shed more light on these items, the Patient Care Committee of the UIce held this symposium, which was unique in the broadness of its scope pertaining to every phase of ovarian cancer.

Clinical Endocrinology of Dogs and Cats A. Rijnberk,2012-12-06 Clinical endocrinology is a fascinating field requiring the challenging combination of broad pathophysiological interest and specific expertise in the field of endocrinology, thereby occupying a common ground between biochemistry, physiology and clinical medicine. In the majority of cases the clinician's notion of the presence of an endocrine disease is largely based upon pattern recognition, in which physical changes play an important role. Therefore many color illustrations have been included throughout the text. In addition there are many full color graphs and illustrations of diagnostic imaging and pathology. With over 350 illustrations the book represents a richly illustrated text on the diseases of endocrine glands. For each gland there is an introductory section on the relevant morphology and physiology, followed by descriptions of the disorders of the gland. When endocrine diseases are quite different in dogs and cats, separate descriptions are given for these species. Protocols for function tests and emergency treatments are presented in the last chapters. Consequently the book provides the user with both comprehensive descriptions and quick references. The book has been written by leading clinicians in the field, with contributions from two biochemists, a radiologist and pathologist. As such a valuable textbook for veterinary students and practitioners has been compiled to fulfil the need for an up-to-date and complete book on endocrine diseases of dogs and cats.

It includes basic introductory material and progresses through each organ system.
