Lines in the Ice Philip J. Hatfield,2016-09-01 The 2014 discovery of HMS Erebus - a ship lost during Sir John Franklin's 1845 expedition to find the Northwest Passage - reignited popular, economic, and political interest in the Arctic's exploration, history, anthropology, and historical geography. *Lines in the Ice* investigates the allure of the North through topographical views, maps, explorers' diaries, and historic photographs. Following the course of major journeys to the Arctic, including those of Martin Frobisher, Henry Hudson, and John Franklin, Philip Hatfield assesses the impact of these incursions on the North's numerous indigenous communities and reveals the role of exploration in making the modern world. Besides detailing the area's vivid history, *Lines in the Ice* also focuses on beautiful works created over the last 500 years by people who live and travel in the Arctic. Lavishly illustrated with reproductions of items rarely seen outside of the British Library, this volume meditates on humans' relationships with the Arctic at a time when climate change poses a catastrophic threat to the peoples and ecosystems of this enigmatic region. A timely work that traces the past's influence on the present day, *Lines in the Ice* showcases the rich visual history of Arctic exploration, indigenous cultural works, and the longstanding ways in which the North has captivated the public.

Why Icebergs Float Andrew Morris, 2016-10-24 The topics explored in each chapter are based on hundreds of discussions the author has led with adult science learners over many years – people who came from all walks of life and had no scientific training, but had developed a burning curiosity to understand the world around them. This book encourages us to reflect on our own relationship with science and serves as an important reminder of why we should continue learning as adults. Praise for Why Icebergs Float 'Asking questions is an important scientific skill and sometimes we can only understand something when we can find the language to ask the right questions; books like this can be really helpful in this respect....This book is one of UCL's open access books. This means that it can be downloaded as a free PDF from the UCL Press website. The commitment to making scientific works such as this freely available is very welcome. This book is very accessible and deserves to reach a wide audience.' - School Science Review 'Morris says in the prologue: 'If you come away from this book with a greater interest in science and enhanced confidence about tackling it, the book will have served its purpose.' So, don't be afraid of science and give Why Icebergs Float a chance. You will absolutely enjoy it.' - Chemistry World '[Why Icebergs Float] draws on experiences and first-person narratives of adult learners who – out of genuine curiosity or embarrassment at their levels of scientific ignorance – have sought to catch-up on lost school science and get a better understanding of their surroundings as a result.' - Education Journal 'The approach illustrates beautifully the influence of language on understanding. The author makes clear how common language can be misleading when scientists have used everyday words but given them very specific meanings.'

The Routledge Companion to Philosophy of Medicine Miriam Solomon, Jeremy R. Simon, Harold Kincaid, 2016-10-04 The Routledge Companion to Philosophy of Medicine is a comprehensive guide to topics in the fields of epistemology and metaphysics of medicine. It examines traditional topics such as the concept of disease, causality in medicine, the epistemology of the randomized controlled trial, the biopsychosocial model, explanation, clinical judgment and phenomenology of medicine and emerging topics, such as philosophy of epidemiology, measuring harms, the concept of disability, nursing perspectives, race and gender, the metaphysics of Chinese medicine, and narrative medicine. Each of the 48 chapters is written especially for this volume and with a student audience in mind. For pedagogy and clarity, each chapter contains an extended example illustrating the ideas discussed. This text is intended for use as a reference for students in courses in philosophy of medicine and philosophy of science, and pairs well with *The Routledge Companion to Bioethics* for use in medical humanities and social science courses.

Seduction and Celebrity Quintin Colville, 2016-11-22 The first publication to focus on the fashionable, ambitious, Emma Hamilton, an influential historical figure in her own right Emma Hamilton (1765–1815) rose from humble origins to national and international fame as a model, performer, trendsetter, and interpreter of neo-classical fashion, though she was probably best known as the mistress of Lord Nelson and the muse of the English portrait painter George Romney. Usually portrayed in a passive and supporting role as muse or lover, her tragic trajectory from childhood prostitution to final destitution and neglect has been used to present her story as being by turns

sordid and ridiculous. This landmark publication recovers Emma Hamilton from myth and misrepresentation, and reveals her as the active and influential historical actor she truly was. The arc of this life—her ambitions, successes, and hardships—is viewed through a new lens, one that places her in a wider context of female celebrity. Accompanying a major exhibition at the National Maritime Museum, this book provides a fresh evaluation of her artistic undertakings, cultural achievements, and legacy.

Empires of Knowledge Paula Findlen, 2018-10-26 *Empires of Knowledge* charts the emergence of different kinds of scientific networks – local and long-distance, informal and institutional, religious and secular – as one of the important phenomena of the early modern world. It seeks to answer questions about what role these networks played in making knowledge, how information traveled, how it was transformed by travel, and who the brokers of this world were. Bringing together an international group of historians of science and medicine, this book looks at the changing relationship between knowledge and community in the early modern period through case studies connecting Europe, Asia, the Ottoman Empire, and the Americas. It explores a landscape of understanding (and misunderstanding) nature through examinations of well-known intelligencers such as overseas missions, trading companies, and empires while incorporating more recent scholarship on the many less prominent go-betweens, such as translators and local experts, which made these networks of knowledge vibrant and truly global institutions. *Empires of Knowledge* is the perfect introduction to the global history of early modern science and medicine.

Science Periodicals in Nineteenth-Century Britain Gowan Dawson, Bernard Lightman, Sally Shuttleworth, Jonathan R. Topham, 2020-03-02 Periodicals played a vital role in the developments in science and medicine that transformed nineteenth-century Britain. Proliferating from a mere handful

to many hundreds of titles, they catered to audiences ranging from gentlemanly members of metropolitan societies to working-class participants in local natural history clubs. In addition to disseminating authorized scientific discovery, they fostered a sense of collective identity among their geographically dispersed and often socially disparate readers by facilitating the reciprocal interchange of ideas and information. As such, they offer privileged access into the workings of scientific communities in the period. The essays in this volume set the historical exploration of the scientific and medical periodicals of the era on a new footing, examining their precise function and role in the making of nineteenth-century science and enhancing our vision of the shifting communities and practices of science in the period. This radical rethinking of the scientific journal offers a new approach to the reconfiguration of the sciences in nineteenth-century Britain and sheds instructive light on contemporary debates about the purpose, practices, and price of scientific journals.

The Mask of Time Michael Tippett,1987

The Social History of the Archive Liesbeth Corens,Kate Peters,Alexandra Walsham,2016 This Supplement builds on a burgeoning body of research that approaches the archive not merely as the object, but also as the subject of enquiry. It explores the phenomenon of record keeping in the early modern period in the context of significant ecclesiastical, political, intellectual and cultural

developments that served as a stimulus to it: state formation, religious reformation, and economic transformation; the advent of the mechanical press, the spread of educational opportunity, and the expansion of literacy; changing epistemological conventions, shifting attitudes towards history and memory, and new modes of self-representation. Focusing attention on the impulses behind the surge in public and private documentation in Europe between 1500 and 1800, the contributors to this volume place the processes by which individual, collective and institutional records were created, compiled, authorised, and used under the microscope. They examine the activities of curators and scribes, analyse the issues of credibility and authenticity to which their endeavours gave rise, and evaluate the role of textual, pictorial, material and financial records in managing knowledge and giving expression to senses of identity. Stretching traditional, technical definitions of the record and archive, they investigate how writing and document-making of various kinds was shaped by dynamic interactions between ordinary people and by the politics of everyday life. They also illuminate the multiple ways in which archives mediate and construct the past, preserving some traces of it for posterity while consigning others to oblivion.--

"Cuckoldry, Impotence and Adultery in Europe (15th-17th century) " SaraF. Matthews-Grieco,2017-07-05 In Renaissance and early modern Europe, various constellations of phenomena-ranging from sex scandals to legal debates to flurries of satirical prints-collectively demonstrate, at different times and places, an increased concern with cuckoldry, impotence and adultery. This concern emerges in unusual events (such as scatological rituals of house-scorning), appears in neglected sources (such as drawings by Swiss mercenary soldier-artists), and engages innovative areas of inquiry (such as the intersection between medical theory and Renaissance comedy). Interdisciplinary analytical tools are here deployed to scrutinize court scandals and decipher archival

documents. Household recipes, popular literary works and a variety of visual media are examined in the light of contemporary sexual culture and contextualized with reference to current social and political issues. The essays in this volume reveal the central importance of sexuality and sexual metaphor for our understanding of European history, politics and culture, and emphasize the extent to which erotic presuppositions underpinned the early modern world.

Methodological Challenges in Nature-Culture and Environmental History Research Jocelyn Thorpe, Stephanie Rutherford, L. Anders Sandberg, 2016-11-10 This book examines the challenges and possibilities of conducting cultural environmental history research today. Disciplinary commitments certainly influence the questions scholars ask and the ways they seek out answers, but some methodological challenges go beyond the boundaries of any one discipline. The book examines: how to account for the fact that humans are not the only actors in history yet dominate archival records; how to attend to the non-visual senses when traditional sources offer only a two-dimensional, non-sensory version of the past; how to decolonize research in and beyond the archives; and how effectively to use sources and means of communication made available in the digital age. This book will be a valuable resource for those interested in environmental history and politics, sustainable development and historical geography.

Picturing Death 1200-1600 Stephen Perkinson, Noa Turel, 2020-11-16 *Picturing Death: 1200-1600* brings together essays considering four key centuries of imagery related to human mortality, from tomb sculpture to painted altarpieces, from manuscripts to printed books, and from minute carved objects to large-scale architecture.
