Fundamentals of Predictive Analytics with JMP, Second Edition Ron Klimberg, B. D.

McCullough, 2017-12-19 Written for students in undergraduate and graduate statistics courses, as well as for the practitioner who wants to make better decisions from data and models, this updated and expanded second edition of *Fundamentals of Predictive Analytics with JMP(R)* bridges the gap between courses on basic statistics, which focus on univariate and bivariate analysis, and courses on data mining and predictive analytics. Going beyond the theoretical foundation, this book gives you the technical knowledge and problem-solving skills that you need to perform real-world multivariate data analysis. First, this book teaches you to recognize when it is appropriate to use a tool, what variables and data are required, and what the results might be. Second, it teaches you how to interpret the results and then, step-by-step, how and where to perform and evaluate the analysis in JMP. Using JMP 13 and JMP 13 Pro, this book offers the following new and enhanced features in an example-driven format: an add-in for Microsoft Excel Graph Builder dirty data visualization regression ANOVA logistic regression principal component analysis LASSO elastic net cluster analysis decision trees k-nearest neighbors neural networks bootstrap forests boosted trees text mining association rules model comparison With today's emphasis on business intelligence, business analytics, and predictive analytics, this second edition is invaluable to anyone who needs to expand his or her knowledge of statistics and to apply real-world, problem-solving analysis. This book is part of the SAS Press program.

Divining Victory: Airpower in the 2006 Israel-Hezbollah War William M. Arkin, 2011-09-16 This is the story of an airpower-dominated campaign, one that was deeply flawed in its design yet impressive in its efficiency. This quick-look study is based upon visits to damaged sites, villages, towns, and cities; discussions with government and military officials; and experience of having evaluated airpower and its effects in Afghanistan, Iraq, and the former Yugoslavia (and previously in Lebanon). Months of follow-up research included exchanges with Israeli, Lebanese, Hezbollah, and US experts. The intent was to develop a timely airpower narrative to enhance professional military education and planning. About the author: William M. Arkin is an independent military analyst, journalist, and author. He writes the "Early Warning" column for [washingtonpost.com](http://www.washingtonpost.com) (where he previously wrote the "DOT.MIL" column from 1998 to 2003) and is a longtime NBC News military analyst. Advances in Communication and Computational Technology Gurdeep Singh

Hura, Ashutosh Kumar Singh, Lau Siong Hoe, 2020-08-13 This book presents high-quality peer-reviewed papers from the International Conference on Advanced Communication and Computational Technology (ICACCT) 2019 held at the National Institute of Technology, Kurukshetra, India. The contents are broadly divided into four parts: (i) Advanced Computing, (ii) Communication and Networking, (iii) VLSI and Embedded Systems, and (iv) Optimization Techniques. The major focus is on emerging computing technologies and their applications in the domain of communication and networking. The book will prove useful for engineers and researchers working on physical, data link and transport layers of communication protocols. Also, this will be useful for industry professionals interested in manufacturing of communication devices, modems, routers etc. with enhanced computational and data handling capacities.

Revenue Recognition Guide (2022) Scott A. Taub, 2021-08-17

Revenue Recognition Guide is a comprehensive reference manual covering key concepts and issues that arise in determining when and how to recognize revenue. It covers the new authoritative literature related to revenue recognition that became effective in the past few years. Revenue Recognition Guide clarifies revenue recognition concepts and principles, and provides insight into issues that have been addressed as the accounting profession prepares to adopt the new revenue recognition literature.

Coercion, Control, Surveillance, and Punishment Ken E. Gause, 2012 This report lifts the curtain on North Korea's three main security agencies, the State Security Department, the Ministry of Public Security, and the Military Security Command. Established with Soviet assistance in the mid to late 1940s and modeled on the Soviet secret police apparatus, North Korea's internal security agencies rely on constant surveillance, a network of informants in every neighborhood, and the threat of punishment in North Korea's notorious prison camps to ensure the Kim regime's total control. The security agencies play a primary role in restricting the flow of information and ensuring strict ideological conformity through harsh surveillance and coercion. North Koreans must participate in self-criticism sessions or face punishment, even time in a political prison camp. State security agents conduct routine checks to ensure that radio sets remain perpetually tuned to the state frequency, and '109 squads' roam border towns at night, arresting smugglers and confiscating South Korean TV shows and dramas that have entered the country via portable media storage devices. Nevertheless, the report also notes that the advent of post-famine small-scale private economic activity, cell phones, DVDs, USBs, smuggled radios and increased access to foreign broadcasting and bribes are beginning to erode some of the information blockade and political controls. Those North Koreans who assume great risks to gain access to information from the outside world and to impart information show courage, whether their actions are an act of dissent or just the result of wanting to learn more about the world. What might ultimately bring change to North Korea is the increased inflow and outflow of information. The security agencies, however, continue to enforce North Korea's information blackout, by increasing border surveillance and cracking down on marketplaces, unauthorized phone calls, and foreign broadcasting. Having ensured the survival of the Kim family's dynastic regime for six decades, North Korea's complex and ruthless internal security apparatus will no doubt continue to be a key element of Kim Jong-un's political control. Greater awareness of how it operates is essential to understanding how the Kim regime remains in power.

Violent Python TJ O'Connor, 2012-12-28 Violent Python shows you how to move from a theoretical understanding of offensive computing concepts to a practical implementation. Instead of relying on another attacker's tools, this book will teach you to forge your own weapons using the Python programming language. This book demonstrates how to write Python scripts to automate large-scale network attacks, extract metadata, and investigate forensic artifacts. It also shows how to write code to intercept and analyze network traffic using Python, craft and spoof wireless frames to attack wireless and Bluetooth devices, and how to data-mine popular social media websites and evade modern anti-virus. Decision-making in a Fuzzy Environment Richard Bellman, 1970

Governance for Health in the 21st Century Ilona Kickbusch, David Gleicher, 2012 A range of collaborative governance mechanisms has developed in many policy arenas in the past decade. The study on governance for health in the 21st century tracks governance innovations that have been introduced to address priority determinants of health and summarizes them as five strategic approaches to smart governance for health. The study relates the emergence of joint action of the health sector and non-health sectors, of public and private actors and of citizens to achieve seminal changes in 21st-century societies. They include a new understanding of health and well-being as key features of what constitutes a successful society and vibrant economy and the higher value placed on equity and participation. The study further describes the type of structures and mechanisms that enable collaboration and outlines the new role that health ministers and ministries and public health agencies need to adopt in such a challenging policy environment.

Targeting Uplift René Michel,Igor Schnakenburg,Tobias von Martens,2019-09-09 This book explores all relevant aspects of net scoring, also known as uplift modeling: a data mining approach used to analyze and predict the effects of a given treatment on a desired target variable for an individual observation. After discussing modern net score modeling methods, data preparation, and the assessment of uplift models, the book investigates software implementations and real-world scenarios. Focusing on the application of theoretical results and on practical issues of uplift modeling, it also includes a dedicated chapter on software solutions in SAS, R, Spectrum Miner, and KNIME, which compares the respective tools. This book also presents the applications of net scoring in various contexts, e.g. medical treatment, with a special emphasis on direct marketing and corresponding business cases. The target audience primarily includes data scientists, especially researchers and practitioners in predictive modeling and scoring, mainly, but not exclusively, in the marketing context.

Coalition Government and Party Mandate Catherine Moury,2013-05-02 Which kind of decisions are passed by Cabinet in coalition governments? What motivates ministerial action? How much leeway do coalition parties give their governmental representatives? This book focuses on a comparative study of ministerial behaviour in Germany, Belgium, Italy and the Netherlands. It discredits the assumption that ministers are 'policy dictators' in their spheres of competence, and demonstrates that ministers are consistently and extensively constrained when deciding on policies. The first book in a new series at the forefront of research on social and political elites, this is an invaluable insight into the capacity and power of coalition government across Europe. Looking at policy formation through coalition agreements and the effectiveness of such agreements, *Coalition Government and Party Mandate* will be of interest to students and scholars of comparative politics, governance and European politics.

Human Movements in Human-Computer Interaction (HCI) Cezary Biele,2021-12-01 This book discusses human-computer interaction (HCI) which is a multidisciplinary field of study which aims at developing and implementing tools and techniques to attain an effective and efficient interaction between the humans (the users) and computers. In recent years, there is an increase of interest of HCI researchers and practitioners in the inclusion of gaze gestures which can greatly enhance the communication between the human user and the computer, as well as other more "physical" communication involving all what can be learned from movements of the human body, from face, hand, leg, foot, etc., to the whole body movement, even extending to the involvement of groups of agents, even society. These explicitly human-centric issues in the development, design, analysis, and implementation of the HCI systems are discussed in the book. A comprehensive state of the art is given complemented with original own proposals. As opposed to more traditional formal and IT based analyses, the discussion is here more focused on relevant research results from psychology and psychophysiology, and other soft, cognitive, etc., sciences. Remarks on the relevance of affective computing are also mentioned.

Progress in Computing, Analytics and Networking Himansu Das,Prasant Kumar Pattnaik,Siddharth Swarup Rautaray,Kuan-Ching Li,2020-03-26 This book focuses on new and original research ideas and findings in three broad areas: computing, analytics, and networking and their potential applications in the various domains of engineering – an emerging, interdisciplinary area in which a wide range of theories and methodologies are being investigated and developed to tackle complex and challenging real-world problems. The book also features keynote presentations and papers from the International Conference on Computing Analytics and Networking (ICCAN 2019), which offers an open forum for scientists, researchers and technocrats in academia and industry from around the globe to present and share state-of-the-art concepts, prototypes, and innovative research ideas in diverse fields. Providing inspiration for postgraduate students and young researchers working in the field of computer science & engineering, the book also discusses hardware technologies and future communication technologies, making it useful for those in the field of electronics.

It covers topics such as Internet of Things, information security, embedded systems, real-time systems, cloud computing, big data analysis, quantum computing, automation systems, bio-inspired intelligence, cognitive systems, cyber physical systems, data analytics, data/web mining, data science, intelligence for security, intelligent decision making systems, intelligent information processing, intelligent transportation, artificial intelligence for machine vision, imaging sensors technology, image segmentation, convolutional neural network, image/video classification, soft computing for machine vision, pattern recognition, human-computer interaction, robotic devices and systems, autonomous vehicles, intelligent control systems, human motor control, game playing, evolutionary algorithms, swarm optimization, neural network, deep learning, supervised learning, unsupervised learning, fuzzy logic, rough sets, computational optimization, and neuro-fuzzy systems.

Subnational Democracy in the European Union John Loughlin, 2001-04-05 This book is the result of a research project carried out for the Committee of the Regions and analyses the 'state of play' of democratic practice at the subnational level in all of the European Member states. Its initial hypothesis was that liberal democracy is closely associated with the rise of the nation state in the 19th century. The nation state, however, has been significantly changing under the impact of various forces including globalization and regionalization, internal reforms of the public administration system such as privatization and deregulation, and the emergence of regions and local authorities as actors in their own rights. These changes pose challenges for the practice of democracy and, in particular, for its expression at the regional and local level. The book deals with the theoretical implications of these changes in terms of the changing nature of the state and new regionalism. However, one of the key findings is that there is no one uniform meaning of democracy across member states and there are variations even within a single state depending on whether the national or subnational levels are considered. Each country chapter gives the historical and philosophical background to the concept of democracy in each country. There is also an exposition of the institutional expression of democracy at the different levels. With regard to the practice of democracy at the subnational level, the role of pressure groups and policy networks is examined as well as the role of political parties. There is a survey of critiques of subnational democracy. Finally, there is a survey of innovative approaches to improving regional and local democracy through a variety of mechanisms and reforms as ways of responding to the challenge and opportunities facing it today.
