The Age of the Network Jessica Lipnack,Jeffrey Stamps,1994 The Age of the Network offers leaders, managers, and teams a new, practical view of how to think about their companies and reinvent them without losing the value and knowledge that's embedded in their current organization. The Age of the Network delivers a rich array of advice and insights for starting the vital process of creating a networked enterprise. Lipnack and Stamps show managers how to focus on five essential team net (networks of teams) principles which include establishing a clear purpose and creating communication links. Next, they offer a guided tour describing how organizations can turn these principles into practice and evaluate their real potential for creating a networked organization.

Information Rules Carl Shapiro,Hal R. Varian,1999 As one of the first books to distill the economics of information and networks into practical business strategies, this is a guide to the winning moves that can help business leaders--from writers, lawyers and finance professional to executives in the entertainment, publishing and hardware and software industries-- navigate successfully through the information economy.

Management Education in the Network Economy Peter J. van Baalen,Lars T. Moratis,2012-12-06 In the network economy, concepts of management knowledge, management learning, and business school organization should change. Otherwise, they will not survive the 21st century. Different (f)actors are putting new demand upon providers of management education and traditional providers of management education are faced with new competitors. Moreover, the dynamics of the playing field have changed, as have approaches to (management) learning. Management Education in the Network Economy proposes the idea of networked business school to cope with these challenges. The book deals with the following subjects: 1) Current economic and organizational realities can best be viewed from the perspective of network organization; management knowledge and education should reflect these transformations to survive. 2) The idea and organization of (management) learning are revolutionizing, as well as the market for (management) education, which brings about huge changes for business schools. 3) Business school, particularly, should capitalize on these transformations and should strategically (re)organize and (re)position themselves to compete in the playing field for management education. 4) A networked learning environment is an integrative and effective learning environment for organizing management education in the 21st century network economy. 5) The networked business school is the organizational form to survive in the 21st century network economy, reflecting the environmental changes and demands, and to realize a competitive edge in the field of management education.

Designing the Networked Organization Ken Everett,2011-08-05 This book explores how naturally connected organizations (NCOs) can survive and thrive in an increasingly unpredictable world using the principles of natural connectivity, organic growth and collaboration. It shows how naturally connected organizations are resilient through cycles of boom and bust. The book argues that the success of these organizations is in their design, and that they are the organizations of the 21st century. They demonstrate that a natural way of running a global business can work. This book builds on earlier work on networks and contributes to the Organizational Design field of management study. Naturally connected organizations are associations of companies and/or individuals, which function via collaboration, communication and connectivity for a shared purpose. NCOs use organic organizing principles rather than control mechanisms'. Traditional organizations embrace mechanical metaphors, the results of which are engineered or re-engineered organizations based on command and control. NCOs are based on natural, organic metaphors.

The Age of the Network Jessica Lipnack,Jeffrey Stamps,1994-11-01 Presents a novel, practical perspective on how to think about a company and reinvent it without losing the value and knowledge embedded in the current organization. Based on concepts used by top corporations, this excellent resource demonstrates how to create enterprises which are defined by speed, agility and a web of interconnected relationships. Describes how businesses can rapidly break through impenetrable challenges and create entirely new opportunities by developing interlocking, boundary-crossing teams. Emphasizes five essential team principles which include establishing a clear purpose and creating rich communication links.

The 30 Day MBA Colin Barrow,2019-01-03 If you want to accelerate your career development and transform your skillset, but without the price tag and two-year commitment of the MBA, this is the book for you. The 30 Day MBA covers the 12 core disciplines of business: accounting, finance, marketing, organizational behaviour, business history, business law, economics, entrepreneurship, ethics and social responsibility, operations management, research and analysis and strategy. New Rules for the New Economy Kevin Kelly,1999-10-01 The classic book on business strategy in the new networked economy-- from the author of the New York Times bestseller The Inevitable Forget supply and demand. Forget computers. The old rules are broken. Today, communication, not computation, drives change. We are rushing into a world where connectivity is everything, and where old business know-how means nothing. In this new economic order, success flows primarily from understanding

networks, and networks have their own rules. In *New Rules for the New Economy*, Kelly presents ten fundamental principles of the connected economy that invert the traditional wisdom of the industrial world. Succinct and memorable, *New Rules* explains why these powerful laws are already hardwired into the new economy, and how they play out in all kinds of business—both low and high tech— all over the world. More than an overview of new economic principles, it prescribes clear and specific strategies for success in the network economy. For any worker, CEO, or middle manager, *New Rules* is the survival kit for the new economy.

Principles for Success Ray Dalio, 2019-11-26 An entertaining, illustrated adaptation of Ray Dalio's *Principles*, the #1 New York Times bestseller that has sold more than two million copies worldwide. *Principles for Success* distills Ray Dalio's 600-page bestseller, *Principles: Life & Work*, down to an easy-to-read and entertaining format that's accessible to readers of all ages. It contains the key elements of the unconventional principles that helped Dalio become one of the world's most successful people—and that have now been read and shared by millions worldwide—including how to set goals, learn from mistakes, and collaborate with others to produce exceptional results. Whether you're already a fan of the ideas in *Principles* or are discovering them for the first time, this illustrated guide will help you achieve success in having the life that you want to have.

The Next Economy MBA LIFT Economy, Erin Axelrod, Kevin Bayuk, Shawn Berry, Ryan Honeyman, Phoenix Soleil, 2023-05-23 This radical and rigorous rethinking of the traditional MBA program combines solid business principles with a commitment to environmental and social justice. Many current and aspiring entrepreneurs are looking for a solid business education that also deeply aligns with their progressive values. Based on a course field-tested with over 500 students, this book fills that gap. It covers traditional topics such as business strategy and structure, finance, marketing, recruiting, and branding from a socially just and environmentally regenerative perspective. And it also touches on topics such as strategies to reverse climate change, nonviolent communication, self-managing organizations, locally self-reliant economies, racial justice, and more. Traditional MBA programs are based on outdated principles that were developed during the Industrial Revolution—and they can be hugely expensive. Sustainable MBA programs, while laudable, are too incremental to make a sufficient impact. The Next Economy MBA is for entrepreneurs seeking to make business an active force for good. It draws on the authors' experience of working with over 300 social enterprises, from small organizations like Winona's Hemp and Heritage Farm to household names like Ben & Jerry's and Patagonia. Our current economy, what the authors call the Business as Usual Economy, has created a massive wealth gap, a climate crisis, racial division, and needless housing, food, and healthcare shortages. This book shows how businesses can pave the way to a Next Economy that meets the basic needs of all people and restores and protects the planetary ecosystem.

Optimal Transport Statistics for Economics and Related Topics Nguyen Ngoc Thach,Vladik Kreinovich,Doan Thanh Ha,Nguyen Duc Trung,2023-12-04 This volume emphasizes techniques of optimal transport statistics, but it also describes and uses other econometric techniques, ranging from more traditional statistical techniques to more innovative ones such as quantiles (in particular, multidimensional quantiles), maximum entropy approach, and machine learning. Applications range from general analysis of GDP growth, stock market, and consumer prices to analysis of specific sectors of economics (construction, credit and banking, energy, health, labor, textile, tourism, international trade) to specific issues affecting economy such as bankruptcy, effect of Covid-19 pandemic, effect of pollution, effect of gender, cryptocurrencies, and the existence of shadow economy. Papers presented in this volume also cover data processing techniques, with economic and financial application being the unifying theme. This volume shows what has been achieved, but even more important are remaining open problems. We hope that this volume will: ^ inspire practitioners to learn how to apply state-of-the-art techniques, especially techniques of optimal transport statistics, to economic and financial problems, and ^ inspire researchers to further improve the existing techniques and to come up with new techniques for studying economic and financial phenomena.

The Future of Decentralized Electricity Distribution Networks Fereidoon Sioshansi,2023-05-23 The Future of Decentralized Electricity Distribution Networks assesses the evolution of the services delivered by the distribution network as demands placed on it proliferates from distributed, self-generating, power storing and power sharing 'consumers' – which Sioshansi terms 'prosumagers'. The work outlines the processes by which passive and homogeneous electricity consumers become prosumers and prosumagers, the nature of their service needs, and dependence on the services delivered by the distribution network diverges. Contributors assess how consumers are discovering and exercising options to migrate away from total reliance on upstream generators to produce electricity and on the delivery network for its transmission. As they do so, the utilities – be they distributors or retailers – must rethink the traditional utility business model. How will they find sufficient revenues to cover their fixed and variable costs as volumetric consumption declines when some consumers become prosumers – or go a step further and become prosumagers? This work argues that new service, business models and new methods for collecting sufficient revenues to maintain the network are mandatory for the survival of modern utilities. Examines the future of services demanded by electricity customers as some diverge from their traditional total reliance on the network for delivery of all their service needs Reviews the emergence of new business models to meet the diverging needs of customers Explores the costs imposed by new types of customers on the delivery network and how to collect sufficient revenues from all to maintain it in ways that are efficient, equitable and fair

Intangible Flow Theory in Economics Tiago Cardao-Pito,2020-12-13 The dominant economic explanations of the 20th century are not comprehensive enough to describe the complexity of economy and society and their reliance on the biosphere. Intangible Flow Theory in Economics: Human Participation in Economic and Societal Production outlines a new theory that challenges both economics and the relativism conveyed in social constructivism, poststructuralism and postmodernism. To mainstream economics and Marxism, monetary flows transform us humans into commodities. To this new theory, flows of economic elements as physical goods or money are consummated by intangible flows that cannot yet be precisely appraised at an actual or approximate value, for instance, workflows, service flows, information flows or communicational flows. The theory suggests a systematic alternative to refute the human commodity framework and interrelated conjectures (e.g. human capital, human resources, human assets). Furthermore, it exhibits that economic and societal production is fully integrated on the biosphere. Conversely, contemporary relativism argues for the end of theory development, suspension of evidence and entrenchment of knowledge validity among local systems (named as paradigms, epistemes, research programs, truth regimes or other terms). Thus, relativism tacitly supports dominant theories as the human commodity framework because it preventively sabotages the creation of new theoretical explanations. Disputing relativist theses, intangible flow theory demonstrates that innovative theoretical explanations remain possible. This book is of significant interest to students and scholars of political economy, economic sociology, organization, economics and social theory.
