Jean-Baptiste Velut,Louise Dalingwater,Vanessa Boulet,Valérie Peyronel

Principles of Network Economics Hagen Bobzin, 2005-12-21 Network problems are manifold and extremely complex. Many problems result from engineering details or mathematical difficulties, others are caused by disregarding economic principles and imperfections of markets. The text provides a fairly integrated approach of transportation related network problems and their solutions with emphasis on economics or, more precisely, microeconomic theory.

The Age of the Network Jessica Lipnack, Jeffrey Stamps, 1994 The Age of the Network offers leaders, managers, and teams a new, practical view of how to think about their companies and reinvent them without losing the value and knowledge that's embedded in their current organization. The Age of the Network delivers a rich array of advice and insights for starting the vital process of creating a networked enterprise. Lipnack and Stamps show managers how to focus on five essential team net (networks of teams) principles which include establishing a clear purpose and creating communication links. Next, they offer a guided tour describing how organizations can turn these principles into practice and evaluate their real potential for creating a networked organization.

Management Education in the Network Economy Peter J. van Baalen, Lars T. Moratis, 2001-10-31 In the network economy, concepts of management knowledge, management learning, and business school organization should change. Otherwise, they will not survive the 21st century. Different (f)actors are putting new demand upon providers of management education and traditional providers of management education are faced with new competitors. Moreover, the dynamics of the playing field have changed, as have approaches to (management) learning. Management Education in the Network Economy proposes the idea of networked business school to cope with these challenges. The book deals with the following subjects: 1) Current economic and organizational realities can best be viewed from the perspective of network organization; management knowledge and education should reflect these transformations to survive. 2) The idea and organization of (management) learning are revolutionizing, as well as the market for (management) education, which brings about huge changes for business schools. 3) Business school, particularly, should capitalize on these transformations and should strategically (re)organize and (re)position themselves to compete in the playing field for management education. 4) A networked learning environment is an integrative and effective learning environment for organizing management education in the 21st century network economy. 5) The networked business school is the organizational form to survive in the 21st century network economy, reflecting the environmental changes and demands, and to realize a competitive edge in the field of management education.

Internet Economics: Models, Mechanisms and Management Hans W. Gottinger, 2017-08-28 The internet represents a rapidly evolving set of technologies which is central to the development of a modern economy. Internet Economics: Models, Mechanisms and Management integrates knowledge about internet service design with economic modelling principles (pricing, cost and service models). Chapters highlight specific applications of the internet such as service provisioning, cloud computing, commerce, business security, network externalities, social media and more recent developments such as the Internet of Things (IoT), the industrial internet, data analytics and the use of big data to bring value to commercial ventures. Therefore, readers will have a conceptual and practical framework for understanding the economics of internet infrastructure and service delivery.

Understanding Mega Free Trade Agreements Jean-Baptiste Velut, Louise Dalingwater, Vanessa Boulet, Valérie Peyronel, 2017-08-23 The rise of cross-regional trade agreements is a defining trend of the current international trade system as shown by the signing of the Trans-Pacific Partnership (TPP) in 2015, the negotiations for the Transatlantic Trade and Investment Partnership (TTIP) between the USA and the EU as well as the Regional Comprehensive Economic Partnership (RCEP) between countries in Asia and Oceania. These differ from previous agreements in their economic significance and large geographic scale, and the wide scope of trade-related issues. The current rise of nationalist and isolationist ideologies across Europe and the USA has raised questions on the future of cross-regional trade deals and made the need to understand their implications for economic and political governance ever more urgent. Two main forms of governance that are central to this volume are the democratic tensions over new generation trade deals on the one hand, and their geopolitical ramifications on the other, which have come into collision to herald the advent of a highly uncertain period of world politics. Many of the questions tackled in this volume, surrounding the democratic governance of trade agreements – whether long-held debates on the inclusion of workers' voices, controversies on intrusive behind the border provisions undermining national sovereignty and local autonomy or new questions on digital rights – are crucial to understand the ebbing popular support for far-reaching trade agreements. This book will be a useful learning tool for students and scholars in a wide range of fields, including Globalisation, Global Governance, International Political Economy, International Trade and Investment and International Law, and should also be of interest to EU trade negotiators, international policymakers and business associations.

The Financial System and the Economy Maureen Burton, Bruce Brown, 2014-12-18 Attempts to assess whether the United States is in economic decline. Appropriate to general readers as well as economics students and scholars, this book examines the fears of Americans about their economic future.

Mega-City Region Development in China Anthony G.O. Yeh, George C. S. Lin, Fiona F. Yang, 2020-11-22 This book sheds light on the mega-city region development in China as a new form of urbanization which plays a crucial role in the economic development of the country. It examines the challenges faced by the mega-city regions and opens up avenues for debates and further research. Economic reform of 1978 has led to an unprecedented growth in the population and economic development of China. A large portion of this increased urban population and the corresponding economic growth has been concentrated in the mega-city regions, such as Beijing-Tianjin-Hebei (BTH), Yangtze River Delta (YRD) and Pearl River Delta (PRD). These three mega-city regions have less land but more people and thus higher economy, resulting in various issues and challenges faced by these regions. These challenges pertain to the socio-economic development, transport, environment, governance and development strategy, which this book explores through case studies of Guangdong-Hong Kong-Macao Greater Bay Area, Beijing-Tianjin-Hebei and Wuhan. This book also explains and analyses the economy, migration processes, transport development, environmental conditions and governance of the mega-city regions of China. With an overview of China's rapid urbanisation and the consequent economic growth, this book provides an essential understanding of related issues in order to establish appropriate strategies and policies to sustain the process of mega-city region development.

Teaching Economics William E. Becker, Suzanne R. Becker, Michael W. Watts, 2006-01-25 Teaching Economics is an invaluable and practical tool for teachers of economics, administrators responsible for undergraduate instruction and graduate students who are just beginning to teach. Each chapter includes specific teaching tips for classroom implementation and summary lists of do's and don'ts for instructors who are thinking of moving beyond the lecture method of traditional chalk and talk.--BOOK JACKET.

The Political Economy of Investment Arbitration Zoe Phillips Williams, 2022-08-11 The Political Economy of Investment Arbitration asks how political institutions and actors in the host state of an investment contribute to the emergence of investor-state disputes. Combining insights from international relations and political economy, it considers two opposing explanations for investor-state disputes: shifting state preferences toward FDI, or the lack of state capacity to maintain an investment-friendly environment. This book's overarching conclusion is that democratic institutions in host states contribute to the emergence of investor-state disputes. Phillips Williams argues that at the heart of many investor-state disputes are highly politicized distributional conflicts involving a range of domestic interest groups. Indeed, it is often pressure from these groups, whether through voting, protests or lobbying, which motivates states to take the policy decisions that are subsequently subject to investors' legal challenges. Thus, this monograph demonstrates that in the face of the potentially high costs posed by investment arbitration, governments continue to take measures which may harm investors in order to pursue specific policy goals. More importantly, these disputes are not only the result of corruption

or weak rule of law, but of measures which are taken at the behest of broader interest groups and relate to clear public policy concerns. This has important implications of our normative assessment of the regime and is highly relevant to current debates in both international law and international political economy about the relationship between investment treaties and domestic politics.

Principles of Transport Economics Emile Quinet,Roger William Vickerman,2004 This book is designed to provide an analytical approach to transport economics with reference to the development of both national and EU transport policy.

Network Science In Education Catherine B. Cramer,Mason A. Porter,Hiroki Sayama,Lori Sheetz,Stephen Miles Uzzo,2018-10-22 Around the globe, there is an increasingly urgent need to provide opportunities for learners to embrace complexity; to develop the many skills and habits of mind that are relevant to today's complex and interconnected world; and to make learning more connected to our rapidly changing workplace and society. This presents an opportunity to (1) leverage new paradigms for understanding the structure and function of teaching and learning communities, and (2) to promote new approaches to developing methods, curricular materials, and resources. Network science - the study of connectivity - can play an important role in these activities, both as an important subject in teaching and learning and as a way to develop interconnected curricula. Since 2010, an international community of network science researchers and educators has come together to raise the global level of network literacy by applying ideas from network science to teaching and learning. Network Science in Education - which refers to both this community and to its activities - has evolved in response to the escalating activity in the field of network science and the need for people to be able to access the field through education channels. Network Science In Education: Transformational Approaches in Teaching and Learning appeals to both instructors and professionals, while offering case studies from a wide variety of activities that have been developed around the globe: the creation of entirely new courses and degree programs; tools for K-20 learners, teachers, and the general public; and in-depth analysis of selected programs. As network-based pedagogy and the community of practice continues to grow, we hope that the book's readers will join this vibrant network education community to build on these nascent ideas and help deepen the understanding of networks for all learners.

The Political Economy of Japanese Trade Policy Aurelia George Mulgan,Masayoshi Honma,2015-08-11 This study provides up-to-date coverage of the most important domestic and external political and economic influences on Japanese trade policy, as well as the evolutionary dynamics of that policy in the post-war period.

Principles of Economics for a Post-Meltdown World John Komlos,2016-01-16 This brief emphasizes the ways in which introductory economics textbooks incorrectly rely on assumptions about the free market, the rational agent model, market fundamentalism, and standard long-standing assumptions in economics, and in doing so disregard the effects of incomplete and asymmetric information on choice and on allocation, and maintain a general but flawed belief that competitive markets can always provide efficient solutions automatically. In other words, the standard economics principles textbook is anachronistic, they assume that tastes are exogenous, they overlook interdependencies and externalities not only in production but in consumption of goods, and they overlook the fact that path-dependence is a major hindrance to optimization. Mainstream principles of economics textbooks distort our worldview with immense political and cultural consequences. Students of these principles deserve a more complete perspective, and this brief critiques that conventional worldview and provides an alternative perspective, with an emphasis on free-market economics wherein the human element should be paramount and moral judgments should override market outcomes. In other words, what is important is not GNP as much as the quality of life, not institutions but how people live and fare in them. This brief argues that economics cannot be a science; it has too many ideological aspects, and in many ways conventional textbooks are not providing a true-to-life depiction of the economy. This Brief will be a reference or supplemental text for college and university students enrolled in such applied undergraduate and graduate courses and seminars in economics and economic theory.

Shipping Innovation N. Wijnolst,Tor Wergeland,Kai Levander,2009 There were not many textbooks on shipping available for the students in the early 1990s. Therefore it was decided to write Shipping in 1996. One year earlier, Niko Wijnolst had published Design Innovation in Shipping, based on work at the Delft University of Technology. The two books together offered a comprehensive insight and overview into the dynamics of global shipping and maritime innovation. Although the core of the books held its value, it was decided to make an update of the two books and merge them into one new textbook, Shipping Innovation, destined for a broad specter of maritime students and professionals. Some substantial new parts were added, as well as some new contributions by other writers. This textbook offers a one-stop-shopping experience to those students and professionals who wish to get acquainted with the multifaceted aspects of global shipping and its everlasting innovation dynamics. Some of the new contributions are the mission-based design process of a Panamax containership and a ro-ro vessel; sustainable shipping and innovation; and an innovation case-study on the revolutionary design of a ballast-free ship.

Political Economy of the Tokyo Olympics Miyo Aramata,2023-06-16 This book is an analysis of both contemporary Tokyo and the contemporary Olympic Games, emphasizing the role of late-stage capitalism and political economy in shaping both. The 2020 Tokyo Olympic Games were mired in scandal from the beginning of the bidding process all the way through to the end of the games. This was further exacerbated by the emergency postponement to 2021 due to the coronavirus pandemic, with many public opinion polls supporting further postponement or cancelation in 2021. The contributors to this volume look at the Tokyo 2020 Games in the context of other modern games and the struggle to use the games as an economic stimulus. They reveal the reality of the Olympic development in Tokyo based on evidence and concrete policy analysis. This is a valuable resource for scholars both of contemporary Japan and of the Olympics and other mega-events.

Telecommunications Deregulation and the Information Economy James Shaw,2001 A comprehensive economic examination of the global competitive restructuring that is now occurring as a result of the US Telecommunications Act 1996. The book guides the reader to the most effective methods of building and enhancing competitive advantage in new markets.

China and Europe Klaus Kunzmann,Willy A Schmid,Martina Koll-Schretzenmayr,2009-09-10 China and Europe address the challenges for the cities and regions of Europe that may be the consequences of such development trends. Contributions by policy-makers and academic observers will prepare the ground for debating the dimensions 'economy', 'knowledge and culture', 'environment and mobility', 'quality of life', and 'governance' of this challenge.
