International Survey on Private Copying - Law and Practice 2015

Wipo, Stichting De Thuiskopie, 2016-01-26 The World Intellectual Property Organization (WIPO) and the Dutch collecting society for private copying remunerations, Stichting de Thuiskopie, are pleased to present the third joint publication on the law and practice of private copying systems around the world. The survey provides a global view of private copying compensation (also known as private copying levies), an important element of copyright and related rights infrastructure. It aims to facilitate evidence-based decision-making and to provide an update on important developments in the private copying law and practice of countries that have such an exception in their legal arsenals.

International Survey on Private Copying - Law and Practice 2013

Gigabit Ethernet Roll Out José Manuel Caballero, 2005

Perceptual Issues in Visualization Georges Grinstein, Haim Levkowitz, 2013-03-07 With the increase in the amount and dimensionality of scientific data collected, new approaches to the design of displays of such data have become essential. The designers of visual and auditory displays of scientific data seek to harness perceptual processes for data exploration. The general aim is to provide ways for raw data, and the statistical and mathematical structures they comprise, to speak for themselves and, thereby, enable

scientists to conduct exploratory, in addition to confirmatory analyses of their data. The present primary approach via visualization depends mainly on coding data as positions of visually distinguishable elements in a two- or three- dimensional euclidean space, e.g., as discrete points comprising clusters in scatter-plot displays and as patches comprising the hills and valleys of statistical surfaces. These displays are immensely effective because the data are in a form that evokes natural perceptual processing of the data into impressions of the presence and spatial disposition of apparent materials, objects, and structures in the viewers apparent physical environment. The problem with this mode of display, however, is that its perceptual potency is largeiy exhausted at dimension three, while we increasingly face the need to explore data of much greater dimensionality. The challenge posed for visualization researchers is to develop new modes of display that can push the dimensionality of data displays higher while retaining the kind of perceptual potency needed for data exploration.

Volume Graphics 2003 Issei Fujishiro, Klaus Mueller, Arie Kaufman, 2003-08-15 This book contains the papers presented at the Third International Workshop on Volume Graphics, which took place from July 7 - 8, 2003 in Tokyo, Japan. Thanks to the devoted assistance of the program committee members and additional reviewers, the accepted papers encompass all aspects of volume graphics and visualization: from modeling, representation, manipulation, rendering, to systems and applications; and constitute six plenary regular sessions, together with a keynote speech and a capstone address during the two full workshop days.

Optical Network Design and Planning Jane M.

Simmons,2014-05-06 This book takes a pragmatic approach to deploying state-of-the-art optical networking equipment in metro-core and backbone networks. The book is oriented towards practical implementation of optical network design. Algorithms and methodologies related to routing, regeneration, wavelength assignment, sub rate-traffic grooming and protection are presented, with an emphasis on optical-bypass-enabled (or all-optical) networks. The author has emphasized the economics of optical networking, with a full chapter of economic studies that offer guidelines as to when and how optical-bypass technology should be deployed. This new edition contains: new chapter on dynamic optical networking and a new chapter on flexible/elastic optical networks. Expanded coverage of new physical-layer technology (e.g., coherent detection) and its impact on network design and enhanced coverage of ROADM architectures and properties, including colorless, directionless, contentionless and gridless. Covers ‘hot’ topics, such as Software Defined Networking and energy efficiency, algorithmic advancements and techniques, especially in the area of impairment-aware routing and wavelength assignment. Provides more illustrative examples of concepts are provided, using three reference networks (the topology files for the networks are provided on a web site, for further studies by the reader). Also exercises have been added at the end of the chapters to enhance the book’s utility as a course textbook.

Rendering, Visualization and Rasterization Hardware Arie Kaufman, 1993-10-28 The latest developments in rendering, visualization, and rasterization hardware are reported in this volume, which contains revised versions of the contributions to the Sixth Eurographics Workshop on Graphics Hardware, held in Vienna in September 1991 in conjunction with the Eurographics '91 Conference. The book has five parts and a keynote paper, Issues and Directions for

Graphics Hardware Accelerators, by Kurt Akeley. The first part of the book concerns graphics hardware design, including simulation and silicon compilers. The second part contains two papers on graphics systems. The third part focuses on volume (voxel-based) machines, describing two devices to facilitate transformations of volumes. The fourth part includes papers on rasterization systems, including character rasterization and scan-conversion of triangular faces. The papers in the last part of the book focus on rendering machines. They include a programmable rendering engine, primitive shaders, and radiosity implementation on a parallel architecture.

All-Optical Signal Processing Stefan Wabnitz, Benjamin J. Eggleton, 2015-04-11 This book provides a comprehensive review of the state-of-the art of optical signal processing technologies and devices. It presents breakthrough solutions for enabling a pervasive use of optics in data communication and signal storage applications. It presents presents optical signal processing as solution to overcome the capacity crunch in communication networks. The book content ranges from the development of innovative materials and devices, such as graphene and slow light structures, to the use of nonlinear optics for secure quantum information processing and overcoming the classical Shannon limit on channel capacity and microwave signal processing. Although it holds the promise for a substantial speed improvement, today's communication infrastructure optics remains largely confined to the signal transport layer, as it lags behind electronics as far as signal

processing is concerned. This situation will change in the near future as the tremendous growth of data traffic requires energy efficient and fully transparent all-optical networks. The book is written by leaders in the field.

Photonic Networks Giancarlo Prati, 2012-12-06 The day when fiber will deliver new, yet now only foreseeable, broadband services to the end user is getting nearer and nearer as we make our way towards the prophetic year 2000. Step by step, as we move from first generation lasers and fibers to the by now common erbium-doped fiber amplifiers, looking forward to such things as wavelength multiplexing and solitons, photonic switching and optical storage, the community of researchers in optical communications has stepped into the era of photonic networks. It is not just a question of terminology. Optical communication means technology to the same extent that photonic network means services. If it is true that information is just as marketable a product as oil or coke, the providing of an extensive global information infrastructure may end up having an even greater impact than the setting up of a world-wide railroad network did at

the beginning of the industrial era. Just like wagons, bandwidth will be responsible for carrying and delivering goods to customers. The challenge for all of us in this field is for it to function in every section of the overall network, transport, access and customer area, in the best possible way: the fastest, most economical and most flexible. New services provided by a new network that exploits the potential and peculiarities of photonics surely requires a rethinking of solutions, new ideas, new architectures, new design, especially where electronics is still dominant, as in transport and access networks.

In China's Shadow Reed E. Hundt, 2007-11 Begins with an exploration of the rise of China's economy and an assessment of its potential for further rapid growth. This book reviews the lessons of the 1990s, when the architectures of law, technology, and leadership produced a robust culture of entrepreneurship, and analyses how entrepreneurship is being undermined. This book begins with an eye-opening exploration of the rise of China's economy and an assessment of its potential for further rapid growth. The implications of China's new power are nothing short of profound, Reed Hundt contends, and he proceeds to paint a detailed landscape of the new reality confronting American businesses and citizens. For the first time in over one hundred years, Americans face critical challenges to their economy and way of life owing not only to China's impending economic might but also to the drift of U.S. business practices and government regulations over the past decade. Aiming for a respectable defeat in the competition of nations will imperil not only the American Dream of an ever-increasing standard of living but also the American project itself, Hundt warns. Meeting the foreseeable challenges is not a matter of legislative strategy from the political left or right or prescriptive plans for businesses. The best chance for

Americans to lead the world in job and wealth creation lies in an expanded and renewed culture of entrepreneurship
