**ENEMY No.1** James L Repace, 2019-02-11 Jim Repace's powerful memoir chronicles the generational struggle for smoke-free workplaces by gassed-out nonsmokers. Railing against the smoky mores of the 20th Century, they battled the dark forces of Big Tobacco. We encounter their tales of misery in smoke-filled offices, restaurants, bars, casinos, and hospitals, as well as trains, planes, ships, and in durance vile. We relive the contentious courtroom dramas, great and small. Prying open once-secret tobacco files, Repace reveals the malevolent machinations of the tobacco industry. He takes us behind the scenes at the EPA in its ultimately successful effort to assess the risks of secondhand smoke, and at OSHA in its ill-starred attempt to eliminate workplace smoking. He recounts the poignant congressional hearing to ban smoking on aircraft. Repace's pioneering public interest research and expert witness testimony stoked the industry's white-hot rage. The cast of characters includes outspoken scientists, physicians, and activist citizens engaged in guerilla warfare against the vast tobacco army of corporate criminals, corrupt congressmen, shyster lawyers, sleazy spokesmen, and bent tobacco moles, purveying half-vast junk science aimed at preserving the pollution of indoor air in pursuit of profits. ENEMY No.1 describes the rise of the nonsmokers' rights movement in the 1970's, the struggle for clean indoor air laws and the tobacco industry's underhanded efforts to thwart these laws for many years. It is written from the unique perspective of a scientist whose research helped underpin the movement, leading to a decades-long battle with Big Tobacco, as detailed in their secret files. This first-hand account describes the political strife and policy changes leading to widespread adoption of clean indoor air laws covering workplaces, aircraft, restaurants, bars and other venues. The tobacco industry reviled Repace as a thorn in its side, tried to discredit his work and to get him fired from the U.S. EPA. In 1998, The Wall Street Journal reported that the tobacco industry regarded Repace as Enemy No. 1. In the late 1970's, James Repace, then a physicist at the Naval Research Laboratory (NRL) in Washington DC, used borrowed equipment to clandestinely measure fine particle air pollution from secondhand smoke in restaurants and bars, weddings and waiting rooms, bowling alleys and bingo games, smoking and nonsmoking homes, indoor sports stadiums, and in dinner theaters and in dives. Published in the journal, Science, he and his NRL colleague Alfred Lowrey demonstrated that secondhand smoke pollution massively exceeded that on busy commuter highways in rush hour, and could not be controlled by ventilation, providing a firm foundation for smoke-free laws. This led to a second career at the EPA as an air policy analyst. Striking again, in 1985, Repace and Lowrey published an article in Environment International estimating that as many as 5000 American nonsmokers died each year from lung cancer due to passive smoking. The national publicity led to the landmark 1992 EPA Report, pegging U.S. lung cancer deaths at 3000 per year, accelerating the adoption of U.S. clean indoor air laws. In a third strike in 2004, Repace published the first measurements of indoor air pollution before and after a state-wide smoking ban in a casino, six bars and a pool hall in Delaware. Published in the Journal of Occupational and Environmental Medicine, it showed that 90% to 95% of airborne soot and carcinogens declined after the ban. The international publicity led to widespread hospitality industry smoking bans. Repace

received the Surgeon General's Medallion from Dr. C. Everett Koop, awards from EPA, OSHA, The American Public Health Association, The Flight Attendant Medical Research Institute, The Robert Wood Johnson Foundation, The International Society of Exposure Science, and the U.S. Departments of Health and Transportation.

*Nicotine* Gregor Hens, 2017-01-10 NAMED A BEST BOOK OF THE YEAR BY THE ECONOMIST By turns philosophical and darkly comic, an ex-smoker's meditation on the nature and consequences of his nearly lifelong addiction. Written with the passion of an obsessive, *Nicotine* addresses a lifelong addiction, from the thrill of the first drag to the perennial last last cigarette. Reflecting on his experiences as a smoker from a young age, Gregor Hens investigates the irreversible effects of nicotine on thought and patterns of behavior. He extends the conversation with other smokers to meditations on Mark Twain and Italo Svevo, the nature of habit, and the validity of hypnosis. With comic insight and meticulous precision, Hens deconstructs every facet of dependency, offering a brilliant analysis of the psychopathology of addiction. This is a book about the physical, emotional, and psychological power of nicotine as not only an addictive drug, but also a gateway to memory, a long trail of streetlights in the rearview mirror of a smoker's life. Cigarettes are sometimes a solace, sometimes a weakness, but always a witness and companion. This is a meditation, an ode, and a eulogy, one that will be passed hand-to-hand between close friends.

**The Chemical Components of Tobacco and Tobacco Smoke, Second Edition** Alan Rodgman, Thomas A. Perfetti, 2013-02-25 Authored by two longtime researchers in tobacco science, *The Chemical Components of Tobacco and Tobacco Smoke, Second Edition* chronicles the progress made from late 2008 through 2011 by scientists in the field of tobacco science. The book examines the isolation and characterization of each component. It explores developments in pertinent analytical technology and results of experimental studies on biological activity, toxicity, and tumorigenicity, including the inhibition of adverse biological activity of one specific tobacco smoke component by another tobacco smoke component. Adding to the progress reported in the First Edition, the comprehensive Second Edition provides nearly 7,000 references on almost 9,600 components. The authors discuss the controversies over the extrapolation of the biological effect of a specific component administered individually by one route versus its biological effect when the component is in a highly complex mixture and is administered by a different route. They also cite studies in which cigarette design technologies were developed to control the per-cigarette mainstream smoke yield of Federal Trade

Commission-defined tar and one or more specific tobacco smoke components of concern. New in the Second Edition: Approximately 1,000 newly reported components have been inserted and several dozen duplicates have been deleted from various tables and from the Alphabetical Index Improved and sharper chemical structures Insertion of new pertinent references for the components in each of the major chapter tables devoted to a particular functional component Updated Index organized by the CAS Registry Number listing of the components Updated discussions in the Introduction and at the beginning of each chapter A searchable companion CD-ROM containing the 350-page alphabetical Component Index Authors Alan Rodgman and Thomas A.
