United States Code United States,2013 The United States Code is the official codification of the general and permanent laws of the United States of America. The Code was first published in 1926, and a new edition of the code has been published every six years since 1934. The 2012 edition of the Code incorporates laws enacted through the One Hundred Twelfth Congress, Second Session, the last of which was signed by the President on January 15, 2013. It does not include laws of the One Hundred Thirteenth Congress, First Session, enacted between January 2, 2013, the date it convened, and January 15, 2013. By statutory authority this edition may be cited U.S.C. 2012 ed. As adopted in 1926, the Code established prima facie the general and permanent laws of the United States. The underlying statutes reprinted in the Code remained in effect and controlled over the Code in case of any discrepancy. In 1947, Congress began enacting individual titles of the Code into positive law. When a title is enacted into positive law, the underlying statutes are repealed and the title then becomes legal evidence of the law. Currently, 26 of the 51 titles in the Code have been so enacted. These are identified in the table of titles near the beginning of each volume. The Law Revision Counsel of the House of Representatives continues to prepare legislation pursuant to 2 U.S.C. 285b to enact the remainder of the Code, on a title-by-title basis, into positive law. The 2012 edition of the Code was prepared and published under the supervision of Ralph V. Seep, Law Revision Counsel. Grateful acknowledgment is made of the contributions by all who helped in this work, particularly the staffs of the Office of the Law Revision Counsel and the Government Printing Office--Preface.

Oil Exploration, Diplomacy, and Security in the Early Cold War Roberto Cantoni,2017-03-27 The importance of oil for national military-industrial complexes appeared more clearly than ever in the Cold War. This volume argues that the confidential acquisition of geoscientific knowledge was paramount for states, not only to provide for their own energy needs, but also to buttress national economic and geostrategic interests and protect energy security. By investigating the postwar rebuilding and expansion of French and Italian oil industries from the second half of the 1940s to the early 1960s, this book shows how successive administrations in those countries devised strategies of oil exploration and transport, aiming at achieving a higher degree of energy autonomy and setting up powerful oil agencies that could implement those strategies. However, both within and outside their national territories, these two European countries had to confront the new Cold War balances and the interests of the two superpowers.

Human Rights and Political Dissent in Central Europe Jakub Tyszkiewicz,2021-12-06 This volume examines to what extent the positive atmosphere created by the Helsinki Accords contributed to the change in political circumstances seen in the countries of Central Europe, under Soviet domination. It focuses in particular on - firstly - a consequent new impetus to bolster human rights in international politics, as Western democracies - especially the US - integrated human rights concerns into its foreign policy relations with Soviet Bloc countries and - secondly - how this Western embrace of human rights seemed to create new incentives for increased dissident activity in Central and Eastern Europe and from 1976 onward. Finally, the book reminds us of the significant role of the Helsinki Accords in developing democratic practices in Eastern European societies under Soviet domination in 1975-1989 and in creating the conditions for the peaceful transition to democratic government in the years that followed. This book will be of key interest to scholars and students of the history of communism, post-Soviet, Russian, and central and East European politics, the history of human rights, and democratization.

The Notebooks of Samuel Taylor Coleridge, Volume 4 Samuel Taylor Coleridge,2019-08-06 theological, philosophical, scientific, social, and psychological matters, plans for and fragments of works, and many other items of great interest. This fourth double volume of the Notebooks covers the years 1819 through 1826. The range of Coleridge's reading, his endless questioning, and his recondite sources continue to fascinate the readers. Included here are drafts and full versions of the later poems. Many passages reflect the technological interests that led to Coleridge's writing of *Aids of Reflection*, later to become an important source for the Transcendentalists. Another development in this volume is the startling expansion of Coleridge's interest in the theory of life and in chemistry--the laboratory chemistry of the Royal Institution fo Great Britain and the theoretical chemistry of German transcendentalists such as Okea, Steffens, and Oersted. Also contained in this volume is an important section on the meaning of marriage. Kathleen Coburn is Professor Emeritus at Victoria College of the University of Toronto. Merton Christensen was Professor of English at the University of Delaware. Bollingen Series L:4. Originally published in 1990. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Actuarial Modelling of Claim Counts Michel Denuit,Xavier Marechal,Sandra Pitrebois,Jean-Francois Walhin,2007-07-27 There are a wide range of variables for actuaries to consider when calculating a motorist's insurance premium, such as age, gender and type of vehicle. Further to these factors, motorists' rates are subject to experience rating systems, including credibility mechanisms and Bonus Malus systems (BMSs). Actuarial Modelling of Claim Counts presents a comprehensive treatment of the various experience rating systems and their relationships with risk classification. The authors summarize the most recent developments in the field, presenting ratemaking systems, whilst taking into account exogenous information. The text: Offers the first self-contained, practical approach to a priori and a posteriori ratemaking in motor insurance. Discusses the issues of claim frequency and claim severity, multi-event systems, and the combinations of deductibles and BMSs. Introduces recent developments in actuarial science and exploits the generalised linear model and generalised linear mixed model to achieve risk classification. Presents credibility mechanisms as refinements of commercial BMSs. Provides practical applications with real data sets processed with SAS software. Actuarial Modelling of

Claim Counts is essential reading for students in actuarial science, as well as practicing and academic actuaries. It is also ideally suited for professionals involved in the insurance industry, applied mathematicians, quantitative economists, financial engineers and statisticians.
