Using Sequence Generator Pro and Friends Alex McConahay, 2019-09-10 This guide is specifically aimed at those who are using--or want to use--Sequence Generator Pro. SGP is a "session management" software package that controls the telescope, mount, camera, and ancillary equipment to target and secure images during a night of imaging astronomical objects. The book begins with a special tutorial to get up and running with SGP. With a comprehensive reference section, it takes the user in detail through the various aspects of user and equipment profiles, equipment definitions, the sequencer, and other essential elements of SGP. Finally, it focuses on how to get the most out of the ancillary programs--target databases, autoguiders, plate solvers, planetarium software, and other applications. Oftentimes, technical guides can end up being far denser than the processes they intend to explain. Many of the insights provided by SGP expert Alex McConahay are beyond what can be found in the official program documentation. In this book, the reader will find in-depth, yet straightforward practical advice on how to automate nightly astroimaging sessions with Sequence Generator Pro.

PRO XSL, CAGLE, 2001-04-26 XSL is a vital companion to XML and is used for two main purposes: to format or style XML data (like Cascading Stylesheets) so that it can be displayed in a browser, and to transform XML data. When you transform an XML document, you manipulate the data into a new structure, for example, re-ordering the data. This enables the same data store to be used in an unlimited number of ways. It is the transformation ability that gives XSL (and therefore XML) its real power. You can imagine XSL as a bridging mechanism between your XML data store and the browser. It does a similar job to ASP, but it is platform independent. XSL can also be used to transform XML into other text formats (eg HTML). Pro XSL demonstrates how to decide which technique to use and how to fit XSL into the development of practical applications. It also shows how to implement the data transformation processes in order to filter, sort or change the structure of data and add style for presentation purposes.
