Big Ideas in Primary Mathematics Robert Newell, 2016-11-14 Lightbulb moments for you and your pupils This book explores the 'big ideas' in maths to help trainee teachers confidently teach the curriculum in a way that engages children and focuses on understanding, rather than memory, for those lightbulb moments. Covering the major concepts in simple terms, whilst carefully linking to the National Curriculum, it shows how they can be used to enable learning and support mathematical mastery. A focus on explaining misconceptions and errors will strengthen trainees and teachers own mathematical subject knowledge, while also giving them the confidence to deepen their understanding of the children they teach. Key topics include: Problem-solving, reasoning and developing fluency in maths Place value and counting systems Measuring money, time and weight Geometry, and understanding space and shape Fractions and statistics for the primary classroom This is essential reading for anyone studying primary mathematics on initial teacher education courses, including undergraduate (BEd, BA with QTS) and postgraduate (PGCE, PGDE, School Direct, SCITT)

routes, and also NQTs. Robert Newell is a tutor in primary education at the UCL Institute of Education, London.

Teaching Mathematics Through Story Caroline McGrath, 2014-06-27 How do you make mathematics relevant and exciting to young children? How can mathematics and literacy be combined in a meaningful way? How can stories inspire the teaching and learning of mathematics? This book explores the exciting ways in which story can be used as a flexible resource to facilitate children's mathematical thinking. It looks at the potential relationship between story and mathematics and practically demonstrates how they can be combined to help children connect, understand and express mathematical ideas using story language. Written for all early years practitioners and students, the book offers a playful pedagogical approach to facilitating children's mathematical thinking which brings a creative satisfaction and confidence to teaching mathematics. Encouraging a creative approach to teaching mathematics that draws on picture books and oral mathematical stories, the book shows you how to: Move from reading to telling stories with mathematical themes Encourage children to pose and solve problems by playing with the plot of stories Enable children to translate abstract mathematical ideas to concrete representations with supporting story props and puppets Create original oral mathematical stories alongside children Capture children's mathematical thinking in an observational framework, supported with audio or video recordings which can be shared with parents and colleagues There are free audio recordings of children and adults telling oral mathematical stories, which feature in the book. These can be downloaded from: www.routledge.com/9780415688154 This book draws on practical work with children, educators, parents, professional storytellers, and trainee practitioners, who bring theoretical ideas to life and offer insight into their mathematical story experiences. those who want to make mathematics relevant, accessible and imaginative for young children.

How to Teach Maths Steve Chinn, 2020-11-23 *How to Teach Maths* challenges everything you thought you knew about how maths is taught in classrooms. Award-winning author Steve Chinn casts a critical eye over many of the long-established methods and beliefs of maths teaching. Drawing from decades of classroom experience and research, he shows how mathematics teaching across the whole ability range can be radically improved by learning from the successful methods and principles used for the bottom quartile of achievers: the outliers. Chinn guides readers through re-adjusting the presentation of maths to learners, considering learners' needs first, and explains the importance of securing early learning to create a conceptual foundation for later success. This highly accessible book uses clear diagrams and examples to support maths teachers through many critical issues, including the following: The context of maths education today Topics that cause students the most difficulty Effective communication in the mathematics classroom Addressing maths anxiety The perfect resource for maths teachers at all levels, this book is especially useful for those wanting to teach the foundations of mathematics in a developmental way to learners of all ages and abilities. It has the potential to change the way maths is taught forever.

Educating Learners with Down Syndrome Rhonda Faragher, Barbara Clarke, 2013-10-23 For individuals with Down syndrome, the extent of the effect of intellectual disability depends largely on the degree of provision of appropriate support and intervention. In *Educating Learners with Down Syndrome*, editors Rhonda Faragher and Barbara Clarke have brought together a number of expert contributors, whose chapters review recent findings in the field of DS education, highlight promising practices, and identify areas for future research. While the emphasis is primarily on the school years, links to early intervention and to life post-16 are made, with chapters organized into three parts:

conceptual overview of issues in learning and teaching, learning mathematics, and literacy development. The book is also united by the cohesive themes of assessment, evidence-based practice, and inclusive practices. Educating Learners with Down Syndrome importantly incorporates the voices of individuals with Down syndrome, whose personal narratives add significance to the research mission of the text and demonstrate the authors' inclusive philosophy. Aimed at researchers, teacher educators, higher degree students, and policy makers, this book is the first of its kind to provide a compendium of research on educating learners with Down syndrome.

Colour Coding for Learners with Autism Adele Devine, 2014-04-21 Children on the autism spectrum are often highly visual learners, making colour a powerful and motivating learning tool. This book explains how colour coding helps young people with autism to generalise lessons already learnt. For example, assigning the colour aqua to all personal care activities or the colour purple to timetabling and transitions establishes clear, visual categories. This allows children to draw on learnt experiences, which creates a sense of order, reduces anxiety, and can aid communication, understanding emotions, organisation, coping with change and diversifying diet. A wealth of tried-and-tested printable resources to enable the practical application of colour coding in the classroom and at home are included on a CD-ROM. With colourful illustrations and resources, *Colour Coding for Learners with Autism* is an effective, must-have teaching tool for anyone involved in the education of young people with autism.

It covers: setting the scene – describing a common teaching situation through a case study or dialogue gathering evidence – how a candidate can gather evidence to meet performance indicators from the featured case studies making connections to underpinning knowledge –

demonstrates how teaching assistants can apply their knowledge to their everyday practice through self-assessment questions. With practical classroom examples to mirror the NVQ course requirements, this book is an essential and comprehensive guide for candidates, tutors, assessors and teachers supporting candidates for this course.

Understanding Learning Difficulties in Maths: Dyscalculia, Dyslexia or Dyspraxia? Judy Hornigold, 2017-10-16 • Why do some pupils experience maths learning difficulties? • How can you determine whether there is a specific learning difficulty such as dyscalculia, dyspraxia or dyslexia? • What teaching strategies can help overcome maths anxiety and specific maths learning difficulties? Without doubt maths is one of the most important subjects taught in schools and yet it is the one subject that can strike fear and dread in children from the very start of their education. In this book Judy Hornigold explores potential causes of maths learning difficulties and particularly the specific difficulties that learners with dyscalculia, dyslexia and/or dyspraxia experience. It considers how general maths anxiety impedes mathematical development and then examines whether this, or a more fundamental and specific difficulty with maths such as dyscalculia, is the real root of difficulties. The book then looks in detail at a wide range of strategies to help overcome general maths anxiety and more specific learning difficulties. It addresses four distinct areas - core number, reasoning, memory and visual spatial awareness - as the main areas of difficulty for learners with dyscalculia (core number and reasoning), dyslexia (memory) and dyspraxia (visual spatial awareness).

Number in the World's Languages Paolo Acquaviva, Michael Daniel, 2022-06-21 The strong development in research on grammatical number in recent years has created a need for a unified perspective. The different frameworks, the ramifications of the theoretical questions, and the diversity of phenomena across typological systems, make this a significant challenge. This book addresses the

challenge with a series of in-depth analyses of number across a typologically diverse sample, unified by a common set of descriptive and analytic questions from a semantic, morphological, syntactic, and discourse perspective. Each case study is devoted to a single language, or in a few cases to a language group. They are written by specialists who can rely on first-hand data or on material of difficult access, and can place the phenomena in the context of the respective system. The studies are preceded and concluded by critical overviews which frame the discussion and identify the main results and open questions. With specialist chapters breaking new ground, this book will help number specialists relate their results to other theoretical and empirical domains, and it will provide a reliable guide to all linguists and other researchers interested in number.
