*Weaving Services and People on the World Wide Web* Irwin King, Ricardo Baeza-Yates, 2009-06-23 Ever since its inception, the Web has changed the landscape of human experiences on how we interact with one another and data through service infrastructures via various computing devices. This interweaving environment is now becoming ever more embedded into devices and systems that integrate seamlessly on how we live, both in our working or leisure time. For this volume, King and Baeza-Yates selected some pioneering

and cutting-edge research work that is pointing to the future of the Web. Based on the Workshop Track of the 17th International World Wide Web Conference (WWW2008) in Beijing, they selected the top contributions and asked the authors to resubmit their work with a minimum of one third of additional material from their original workshop manuscripts to be considered for this volume. After a second-round of reviews and selection, 16 contributions were finally accepted. The work within this volume represents the tip of an iceberg of the many exciting advancements on the WWW. It covers topics like semantic web services, location-based and mobile applications, personalized and context-dependent user interfaces, social networks, and folksonomies. The presentations aim at researchers in academia and industry by showcasing latest research findings. Overall they deliver an excellent picture of the current state-of-the-art, and will also serve as the basis for ongoing research discussions and point to new directions.

Vision Based Identification and Force Control of Industrial Robots Abdullah Aamir Hayat, Shraddha Chaudhary, Riby Abraham Boby, Arun Dayal Udai, Sumantra Dutta Roy, Subir Kumar Saha, Santanu Chaudhury, 2022-03-21 This book focuses on end-to-end robotic applications using vision and control algorithms, exposing its readers to design innovative solutions towards sensors-guided robotic bin-picking and assembly in an unstructured environment. The use of sensor fusion is demonstrated through a bin-picking task of texture-less cylindrical objects. The system identification techniques are also discussed for obtaining precise kinematic and dynamic parameters of an industrial robot which facilitates the control schemes to perform pick-and-place tasks autonomously without any interference from the user. The uniqueness of this book lies in a judicious

balance between theory and technology within the context of industrial application. Therefore, it will be valuable to researchers working in the area of vision- and force control- based robotics, as well as beginners in this inter-disciplinary area, as it deals with the basics and technologically advanced research strategies.

**Ubiquitous Radio Sensing** Martin Schmidhammer, 2023-07-25 Many applications in the emerging smart environments, such as smart cities and intelligent transportation, require an accurate situational awareness, i.e., information about presence and location of all users in the environment. A reliable situational awareness is based on robust communications and sensing techniques, as well as large-scale deployment. Therefore, an integration of sensing functionality is envisioned as a native capability of next generation wireless networks. This work provides a novel radio sensing approach for the localization of non-cooperative users, referred to as multipath-enhanced device-free localization

(MDFL). For localization, MDFL exploits user-induced variations in the received power of static signal components, i.e., line-of-sight and multipath components. Due to its low computational complexity, the proposed MDFL approach represents a suitable technique for the emerging perceptive wireless networks and can help to enable ubiquitous radio sensing.

World Englishes on the Web Mirka Honkanen, 2020-08-15 World Englishes on the Web focuses on linguistic practices at the intersection of international migration and social media, examining the language repertoires of Nigerians living in the United States, and their negotiations of identity and authenticity on a Nigerian web forum. Based on a large corpus of informal, multilingual, interactive, online writing, this book describes how diasporic Nigerians employ African-American Vernacular English, Nigerian English, Nigerian Pidgin, and ethnic Nigerian languages in an online community of practice. The

project combines corpus linguistic methods—relying on a corpus management tool custom-made for web forum data—with ethnographically-informed qualitative analyses of morphosyntactic, lexical, and orthographic features, and immigrants’ language attitudes and ideologies. It is relevant particularly for linguists and other social scientists interested in World Englishes, the sociolinguistics of globalization and computer-mediated communication, corpus linguistics, and pidgin and creole languages

*Machine Learning in Translation Corpora Processing* Krzysztof Wolk, 2019-02-25 This book reviews ways to improve statistical machine speech translation between Polish and

English. Research has been conducted mostly on dictionary-based, rule-based, and syntax-based, machine translation techniques. Most popular methodologies and tools are not well-suited for the Polish language and therefore require adaptation, and language resources are lacking in parallel and monolingual data. The main objective of this volume to develop an automatic and robust Polish-to-English translation system to meet specific translation requirements and to develop bilingual textual resources by mining comparable corpora.
