Creating Low Carbon Cities Shobhakar Dhakal,Matthias Ruth,2017-03-10 This book addresses key topics in the current deliberations and debates on low carbon cities that are underway globally. Contributions by experts from around the world focus on the key factors required for creating low carbon cities. These include appropriate infrastructure, ensuring co-benefits of climate actions, making best use of knowledge and information, proper accounting of emissions, and social factors such as behavioral change. Readers will gain a better understanding of these drivers and explore potential transformation pathways for cities. Particular emphasis is given to the current situation of energy consumption and greenhouse gas (GHG) emissions at the urban level, stressing the complexity of measuring GHG emissions from cities. Chapters also shed new light on the long-term transformation pathways towards low carbon. This book discusses key challenges and opportunities in all these domains to aid in creating low carbon cities, making it of value to policy makers, researchers in academia and consultants working on climate change and energy issues. “The low carbon cities agenda is of bold ambition and demands rapid societal transformation. This book provides invaluable information and analysis on how the goals of this agenda can be achieved and what will be the significant obstacles in the way. The content in the book goes below the surface to reveal on-the-ground economic, engineering and equity issues that are at the heart of the Paris Climate Agreement and the ensuing policy debates. In this way, Creating Low Carbon Cities serves as a critical scholarly benchmark and as a toolkit for further action. William Solecki, Professor, Institute for Sustainable Cities, City University of New York Creating Low Carbon Cities provides a refreshingly critical approach to low-carbon urban development, what has been achieved so far and the challenges ahead. It will be an important data-driven resource for local leaders, sustainability practitioners and urban planners.” Ms. Monika Zimmermann, Deputy Secretary General, ICLEI—Local Governments for Sustainability

The Fundamentals of Figure Drawing Barrington Barber,2017-06-13 The ability to draw the human form accurately and competently is a primary goal for many aspiring artists, despite the current trend in the art establishment away from figurative subjects. The book is intended for anyone who wants to discover every aspect of what for centuries was regarded as the real test of an artist's mettle. Renowned teacher and artist Barrington Barber begins his exploration with anatomy, an understanding which is vital if the artist is to handle form and translate what he sees into a believable representation of life. He goes on to look at the whole figure: clothed, drawn from life, in action and in detail. Supported by sections on composition, styles and a step-by-step guide to a final composition, he has once again achieved a brilliantly inspirational art book. Comprehensive, easy to follow and packed with over 300 of Barrington Barber's illustrations, The Fundamentals of Figure Drawing is a must for artists of all abilities.

Petrodiesel Fuels Ozcan Konur,2021-05-06 This third volume of the handbook presents a representative sample of the population papers in the field of petrodiesel fuels. Following the substantial public concerns on the adverse impact of the emissions from petrodiesel fuels on the environment and human health, the research has intensified in the areas related to the reduction of these adverse effects. Thus, bioremediation of spills from crude oils and petrodiesel fuels at sea and soils as well as desulfurization of petrodiesel fuels have emerged as publicly important research areas. Similarly, the emissions from diesel fuel exhausts, due to their adverse effects on both human health and environment, have been researched more in recent years. These emissions cover particulate emissions, aerosol emissions, and NOx emissions. Research on the adverse impact of petrodiesel fuel exhaust emissions on human health has primarily progressed along the lines of respiratory illnesses, cancer, and other illnesses, such as cardiovascular illnesses, brain illnesses, and reproductive system illnesses, through human, animal, and in vitro studies. It is clear that these illnesses caused by the petrodiesel fuel exhaust emissions have been one of the most significant reasons to develop alternative biodiesel fuels.

Part IX presents a representative sample of the population papers in the field of crude oils covering major research fronts. It covers crude oil spills in general, crude oil spills and their cleanup, properties and removal of crude oils, biodegradation of crude oil-contaminated soils, and crude oil recovery besides an overview paper. Part X presents a representative sample of the population papers in the field of petrodiesel fuels in general covering major research fronts. It covers combustion of biodiesel fuels in diesel engines, bioremediation of biodiesel fuel-contaminated soils, biodiesel power generation, and desulfurization of diesel fuels besides an overview paper. Part XI presents a representative sample of the population papers in the field of emissions from petrodiesel fuels covering major research fronts. It covers diesel emission mitigation, diesel particulate emissions, and diesel NOx emissions, besides an overview paper. Part XII presents a representative sample of the population papers in the field of the health impact of the emissions from petrodiesel fuels covering major research fronts. It covers respiratory illnesses, cancer, cardiovascular, brain, and reproductive system illnesses, besides an overview paper. This book will be useful to academics and professionals in the fields of Energy Fuels, Public Environmental Occupational Health, Pharmacology, Pharmacy, Immunology, Respiratory System, Allergy, and Oncology. Ozcan Konur is both a materials scientist and social scientist by training. He has published around 200 journal papers, book chapters, and conference papers. He has focused on the bioenergy and biofuels in recent years. In 2018, he edited Bioenergy and Biofuels, which brought together the work of over 30 experts in their respective field. He also edited the Handbook of Algal Science, Technology, and Medicine with a strong section on the algal biofuels in 2020.

The Apaches Donald E. Worcester, 2013-04-08 Until now Apache history has been fragmented, offered in books dealing with specific bands or groups-the Mescaleros, Mimbrenos, Chiricahuas, and the more distant Kiowa Apaches, Lipans, and Jicarillas. In this book, Donald E. Worcester synthesizes the total historical experience of the Apaches, from the post-Conquest Spanish era to the late twentieth century. In clear, fluent prose he focuses primarily on the nineteenth century, the era of the Apaches' sometimes splintered but always determined resistance to the white intruders. They were never a numerous tribe, but, in their daring and skill as commando-like raiders, they well deserved the name Eagles of the Southwest. The book highlights the many defensive stands and the brilliant assaults the Apaches made on their enemies. The only effective strategy against them was to divide and conquer, and the Spaniards (and after them the Anglo-Americans) employed it extensively, using renegade Indians as scouts, feeding traveling bands, and trading with them at their presidios and missions. When the Mexican Revolution disrupted this pattern in 1810, the Apaches again turned to raiding, and the Apache wars that erupted with the arrival of the Anglo-Americans constitute some of the most sensational chapters in America's military annals. The author describes the Apaches' life today on the Arizona and New Mexico reservations, where they manage to preserve some of the traditional ceremonies, while trying to provide livelihoods for all their people. The Apaches still have a proud history in their struggles against overwhelming odds of numbers and weaponry. Worcester here re-creates that history in all its color and drama.

The Numinous Legacy Adair Butchins, 2002 Where is God in the universe if anywhere? Why did God make germs? Why should we be so special? Could the universe have been different? This is a book that brings home, in no uncertain fashion, the discrepancy between the universe envisaged by the ancient sages and prophets and that of modern scientific cosmology, where the possibility of divine intervention looks less and less likely. Butchins demonstrates with clarity how the scientific method may be used, despite certain drawbacks, in an attempt to verify objective truth. It describes how the effect of the Copernican Revolution in the seventeenth century has steadily undermined the basic structure of the three great monotheistic religions of our day, Judaism, Christianity, and Islam, especially with respect to their eschatological concepts. The Eastern religions, being less anthropomorphic, are less affected. The theistic argument from design is shown to be powerful enough to have caused disagreement among present-day scientists, in spite of the strictures of Professor Dawkins. In general, the book attempts to make some sense of the structure of the universe in terms of our own consciousness; it behoves the reader to consider that
