War of Extermination Hannes Heer, Klaus Naumann, 2004-11 This volume contains the most important contributions by distinguished historians who have thoroughly demolished this Wehrmacht myth. The picture that emerges from this collection is a depressing one and raises many questions about why ordinary men got involved as perpetrators and bystanders in an unprecedented program of extermination of racially inferior men, women, and children in Eastern Europe and the Soviet Union during the Second World War.--Pub. desc.

The Tungusic Languages Alexander Vovin, José Andrés Alonso de la Fuente, Juha Janhunen, 2023-08-31 The Tungusic Languages is a survey of Tungusic, a language family which is seriously endangered today, but which at the time of its maximum spread was present all over Northeast Asia. This volume offers a systematic succession of separate chapters on all the individual Tungusic languages, as well as a number of additional chapters containing contextual information on the language family as a whole, its background and current state, as well as its history of research and documentation. Manchu and its mediaeval ancestor Jurchen are important historical literary languages discussed in this volume, while the other Tungusic languages, around a dozen altogether, have always been spoken by small, local, though in some cases territorially widespread, populations engaged in traditional subsistence activities of the Eurasian taiga and steppe zones and the North Pacific coast. All contributors to this volume are well-known specialists on their specific topics, and, importantly, all the authors of the chapters dealing with modern languages have personal experience of linguistic field work among Tungusic speakers. This volume will be informative for scholars and students specialising in the languages and peoples of Northeast Asia, and will also be of interest to those engaged with linguistic typology, cultural anthropology, and ethnic history who

wish to obtain information on the Tungusic languages.

Creating Low Carbon Cities Shobhakar Dhakal, Matthias Ruth, 2017-03-10 This book addresses key topics in the current deliberations and debates on low carbon cities that are underway globally. Contributions by experts from around the world focus on the key factors required for creating low carbon cities. These include appropriate infrastructure, ensuring co-benefits of climate actions, making best use of knowledge and information, proper accounting of emissions, and social factors such as behavioral change. Readers will gain a better understanding of these drivers and explore potential transformation pathways for cities. Particular emphasis is given to the current situation of energy consumption and greenhouse gas (GHG) emissions at the urban level, stressing the complexity of measuring GHG emissions from cities. Chapters also shed new light on the long-term transformation pathways towards low carbon. This book discusses key challenges and opportunities in all these domains to aid in creating low carbon cities, making it of value to policy makers, researchers in academia and consultants working on climate change and energy issues. "The low carbon cities agenda is of bold ambition and demands rapid societal transformation. This book provides invaluable information and analysis on how the goals of this agenda can be achieved and what will be the significant obstacles in the way. The content in the book goes below the surface to reveal on-the-ground economic, engineering and equity issues that are at the heart of the Paris Climate Agreement and the ensuing policy debates. In this way, *Creating Low Carbon Cities* serves as a critical scholarly benchmark and as a toolkit for further action. William Solecki, Professor, Institute for Sustainable Cities, City University of New York *Creating Low Carbon Cities* provides a refreshingly critical approach to low-carbon urban development, what has been achieved so far and the challenges ahead. It will be an important data-driven resource for local leaders, sustainability practitioners and urban planners." Ms. Monika Zimmermann, Deputy Secretary General, ICLEI—Local Governments for Sustainability

The Fundamentals of Figure Drawing Barrington Barber, 2017-06-13 The ability to draw the human form accurately and competently is a primary goal for many aspiring artists, despite the current trend in the art establishment away from figurative subjects. The book is intended for anyone who wants to discover every aspect of what for centuries was regarded as the real test of an artist's mettle. Renowned teacher and artist Barrington Barber begins his exploration with anatomy, an understanding which is vital if the artist is to handle form and translate what he sees into a believable representation of life. He goes on to look at the whole figure: clothed, drawn from life, in action and in detail. Supported by sections on composition, styles and a step-by-step guide to a final composition, he has once again achieved a brilliantly inspirational art book. Comprehensive, easy to follow and packed with over 300 of Barrington Barber's illustrations, *The Fundamentals of Figure Drawing* is a must for artists of all abilities.
