Digitalization and Management Innovation A.J. Tallón-Ballesteros, P. Santana-Morales, 2023-02-28 The digital era has brought about important changes that continue to affect all our lives. Efficient management and storage of digital information has become crucial, as has the ability to access that information quickly and efficiently, and priorities are to allow for the saving of digital data in many different ways, and to avoid the loss of information in the event of a malfunction. This book presents the 65 papers presented at DMI2022, the first in the new annual conference series Digitalization and Management Innovation (DMI), held as a hybrid event in Beijing, China, on 26 November 2022. A total of 190 submissions were received for the conference, and the papers presented here were selected after careful and conscientious review, bearing in mind the breadth and depth of the research topics falling within the scope of digital and management innovation and resulting in an acceptance rate of 34%. Topics covered include digital transformation, supply chains, business models, and block chain, enterprises, banking, and sustainability, as well as policy in artificial intelligence,

the gig economy, the post-epidemic era, green supply, citizenship behavior, human resource management, human relationships, agriculture, and environmental matters. Algorithms of Resistance Tiziano Bonini, Emiliano Trere, 2024-02-06 How global workers, influencers, and activists develop tactics of algorithmic resistance by appropriating and repurposing the same algorithms that control our lives. Algorithms are all around us, permeating more and more aspects of our daily lives. While accounts of platform power tend to come across as bleak and monolithic, *Algorithms of Resistance* shows how people can resist algorithms across a variety of domains. Drawing from rich ethnographic materials and perspectives from both the Global North and South, authors Tiziano Bonini and Emiliano Treré explore how people appropriate and reconfigure algorithms to pursue their objectives in three domains of everyday life: gig work, cultural industries, and politics. They reveal how forms of algorithmic agency and resistance are endemic and mundane and how the platform society is a contested battleground of contrasting forces. Bonini and Treré begin by outlining their key theoretical framework of moral economies. This framework argues that algorithms exist on a continuum. At its two extremes are two competing moral economies: the user moral economy and the platform moral economy. From here, *Algorithms of Resistance* chronicles the various inventive ways that individuals can work to achieve agency and resist the ubiquitous power of algorithms. Casting a wide net with a diverse range of case studies, Bonini and Treré reveal the moral imperative for all of us—from delivery drivers to artists to social movements—to resist algorithms.
