Political Campaigning, Elections and the Internet Darren Lilleker, Nigel Jackson, 2013-03-01 The Internet first played a minor role in the 1992 U.S. Presidential election, and has gradually increased in importance so that it is central to election campaign strategy. However, election campaigners have, until very recently, focused on Web 1.0: websites and email. Political Campaigning, Elections and the Internet contextualises the US Presidential campaign of 2008 within three other contests: France 2007; Germany 2009; and the UK 2010. In offering a comparative history of the use of the Internet as an election tool, the authors are able to test the optimistic view that the Internet is transforming elections while also mapping the role the Internet plays and performs for parties and candidates. Lilleker and Jackson offer in-depth analysis demonstrating how interactive Web 2.0 online tools, including weblogs, social networking sites and file-sharing sites, are utilised and evaluate the role of these tools in the marketing and branding of parties and candidates. Examining the interactivity between candidate, party, and voter, this important book will be of strong interest to students and scholars of political science, elections, international relations and political communication. It will be of value to those within public relations, marketing and related communication and media programmes.

The Economic Impact of Digital Technologies Paolo Guerrieri,Sara Bentivegna,2011-01-01 The Economic Impact of Digital Technologies offers a profoundly illuminating examination of ICT transformations in Europe and its critical role in greater social inequality. It presents scholars and policy makers with original and practical tools to benchmark and assess the ICT diffusion and inclusion process. The core message of book is that a coherent European strategy for embedding ICT technologies in society is long overdue. Social differences in ICT use persist and are in some cases widening, yet despite this fact there is a dearth of research on remedying digital inequalities. This is of particular importance given that relative levels of ICT use, investment and research can often explain variations in economic

performance between industrialised countries. The purpose of this book is to fill the gap in the literature by presenting key evidence on the economic benefits (and costs) deriving from investment in an inclusive information society. The authors propose indicators and indexes of digital development and e-Inclusion (and its flip-side e-exclusion) to assess the relationship between inclusive ICT and wider economic and social performance in Europe. Presenting the methodology to monitor countries' performance and ICT use, together with original measures and policy suggestions, this book will be indispensable to policymakers, scholars and postgraduate students in a variety of areas including economic growth, innovation, industrial and organizational studies, information and technology, European studies, and public and social policy.

Technology Driven Curriculum for 21st Century Higher Education Students in Africa Lawrence Meda,H. Makura,2017-08-16 The book consists of novel and empirical research in broad areas of technology and curriculum in selected African countries. The central theme of the book is technology and the higher education curriculum. The book consists of case studies from selected African countries, namely, Lesotho; Namibia; Kenya; South Africa; Zimbabwe; Tanzania and Nigeria. These studies confirm that in this contemporary digital era, educational technology is playing an increasingly important role. It has become so ubiquitous and fundamental in the teaching and learning. Higher education sectors across the continent are increasingly compelled to use

educational technology to keep up with needs of 21st century students who want to be afforded opportunities to be able to learn in real time, anytime, and on their own terms using opportunities for creative innovation made possible by new information and communication technologies.

Malware Analysis Using Artificial Intelligence and Deep Learning Mark Stamp, Mamoun Alazab, Andrii Shalaginov, 2020-12-20 □ This book is focused on the use of deep learning (DL) and artificial intelligence (AI) as tools to advance the fields of malware detection and analysis. The individual chapters of the book deal with a wide variety of state-of-the-art AI and DL techniques, which are applied to a number of challenging malware-related problems. DL and AI based approaches to malware detection and analysis are largely data driven and hence minimal expert domain knowledge of malware is needed. This book fills a gap between the emerging fields of DL/AI and malware analysis. It covers a broad range of modern and practical DL and AI techniques, including frameworks and development tools enabling the audience to innovate with cutting-edge research advancements in a multitude of malware (and closely related) use cases.

Networking and Online Games Grenville Armitage, Mark Claypool, Philip Branch, 2006-08-04 The computer game industry is clearly growing in the direction of multiplayer, online games. Understanding the demands of games on IP (Internet Protocol) networks is essential for ISP (Internet Service Provider) engineers to develop appropriate IP services. Correspondingly, knowledge of the underlying network's capabilities is vital for game developers. *Networking and Online Games* concisely draws together and illustrates the overlapping and interacting technical concerns of these sectors. The text explains the principles behind modern multiplayer communication systems and the techniques underlying contemporary networked

games. The traffic patterns that modern games impose on networks, and how network performance and service level limitations impact on game designers and player experiences, are covered in-depth, giving the reader the knowledge necessary to develop better gaming products and network services. Examples of real-world multiplayer online games illustrate the theory throughout.

Networking and Online Games: Provides a comprehensive, cutting-edge guide to the development and service provision needs of online, networked games.

Contrasts the considerations of ISPs (e.g. predicting traffic loads) with those of game developers (e.g. sources of lag/jitter), clarifying coinciding requirements. Explains how different technologies such as cable, ADSL (Asymmetric Digital Subscriber Line) and wireless, etc., affect online game-play experience, and how different game styles impose varying traffic dynamics and requirements on the network. Discusses future directions brought by emerging technologies such as UMTS (Universal Mobile Telephone Service), GPRS (General Packet Radio Service), Wireless LANs, IP service Quality, and NAPT/NAT (Network Address Port Translation/Network Address Translation)

Illustrates the concepts using high-level examples of existing multiplayer online games (such as Quake III Arena, Wolfenstein Enemy Territory, and Half-Life 2). Networking and Online Games will be an invaluable resource for games developers, engineers and technicians at Internet Service Providers, as well as advanced undergraduate and graduate students in Electrical Engineering, Computer Science and Multimedia Engineering.

Digital citizenship education from a parent's perspective Janice Richardson, Veronica Samara, 2022-11-01 A majority of parents today are grappling with issues such as privacy, digital footprints and bullying. Where do they turn to find reliable information? When should they intervene in their children's online activities? What is their role in ensuring that their children master the values, attitudes, skills and knowledge they need to actively, effectively engage with society? In 2020, the Council of Europe conducted a survey to better understand the views of parents on digital citizenship education and the concerns they have about their children's use of digital technology. More than 21 000 parents in 47 countries responded to the survey, which was followed up by interviews in 2020 and 2021. Digital citizenship education from a parent's perspective maps the needs and reflections of parents as they strive to ensure the well-being of their children and help them become competent digital citizens, who are empowered by digital technology rather than shaped by it. Conducted in the midst of school closures during the Covid-19 pandemic, the study documents parents' experience when they stepped up as primary educators, often with little or no guidance from schools and inadequate digital equipment to cover their children's needs. It aims to foster debate between parents, educators, researchers and policy makers on the meaning and challenges of digital citizenship education for children growing up in today's digital age.

Applied Economics in the Digital Era James Alleman, Paul N. Rappoport, Mohsen Hamoudia, 2020-05-16 Gary Madden was a renaissance man with respect to the nexus between information and communications technology (ICT) and economics. He contributed to a variety of fields in ICT: applied econometrics, forecasting, internet governance and policy. This series of essays, two of which were co-authored by Professor Madden prior to his untimely death, cover the range of his research interests. While the essays focus on a number of ICT issues, they are on the frontier of research in the sector. Gerard Faulhaber provides a broad overview of how we have reached the digital age and its implications. The applied econometric section brings the latest research in the area, for example Lester Taylor illustrates how own-price, cross-price and income elasticities can be calculated from survey data and translated into real income effects. The forecasting section ranges from forecasting online political participation to broadband's impact on economic growth. The final section covers aspects of governance and regulation of the

ICT sector.
