Virtual Freedoms, Terrorism and the Law Giovanna De Minico, Oreste

Pollicino, 2021-02-15 This book examines the risks to freedom of expression, particularly in relation to the internet, as a result of regulation introduced in response to terrorist threats. The work explores the challenges of maintaining security in the fight against traditional terrorism while protecting fundamental freedoms, particularly online freedom of expression. The topics discussed include the clash between freedom of speech and national security; the multijurisdictional nature of the internet and the implications for national sovereignty and transnational legal structures; how to determine legitimate and illegitimate association online; and the implications for privacy and data protection. The book presents a theoretical analysis combined with empirical research to demonstrate the difficulty of combatting internet use by terror organizations or individuals and the range of remedies that might be drawn from national and international law. The work will be essential reading for students, researchers and policy makers in the areas of Constitutional law; Criminal Law, European and International law, Information and Technology law and Security Studies.

Critical Information Infrastructure Protection and the Law National Academy of Engineering, National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Critical Information Infrastructure Protection and the Law, 2003-05-21 All critical infrastructures are increasingly dependent on the information infrastructure for information management, communications, and control functions. Protection of the critical information infrastructure (CIIP), therefore, is of prime concern. To help with this step, the National Academy of Engineering asked the NRC to assess the various legal issues associated with CIIP. These issues include incentives and disincentives for information sharing between the public and private sectors, and the role of FOIA and antitrust laws as a barrier or facilitator to progress. The report also provides a preliminary analysis of the role of criminal law, liability law, and the establishment of best practices, in encouraging various stakeholders to secure their computer systems and networks.

As criminals continue to harness technological advancements that are outpacing legal and ethical standards, law enforcement and government officials are faced with the challenge of devising new and alternative strategies to identify and apprehend criminals to preserve the safety of society. The Encyclopedia of Criminal Activities and the Deep Web is a three-volume set that includes comprehensive articles covering multidisciplinary research and expert insights provided by hundreds of leading researchers from 30 countries including the United States, the United Kingdom, Australia, New Zealand, Germany, Finland, South Korea, Malaysia, and more. This book introduces the notion of cyber threat intelligence and analytics and presents different attempts in utilizing machine learning and data mining techniques to create threat feeds for a range of consumers. Moreover, this book sheds light on existing and emerging trends in the field which could pave the way for future works. The Vietnam War is one of the longest and most controversial in US history. Indo-Russian Military and Nuclear Cooperation Jerome M. Conley, 2001 In this book Jerome M. Conley argues that strained Indo-American relations stem from a deep nexus of historical factors. Conley begins his examination of the delicate balance of power in the region by looking back to the Moscow-New Delhi deal during the Cold War. He argues that the dialogue between the United States, India, and Russia that was established during this era has persisted only because of American ambivalence, short-term Indian needs, and Russian economic trends. Consequently, the United States must sow the seeds for long-term trust and cooperation with India to ensure limited and controlled nuclear expansion. This book will appeal to international affairs and security studies scholars, foreign policy historians, and anyone interested in exploring the complexities of regional strategic arms control.

Research Outlook, Innovations & Research Trends in Science & Technology Prof S S Rajput, Prof Dr Zeliha Selamoglu, Dr Prashant P Chaudhari, Mrs Priyanka Gupta, 2020-10-25 This book is focused predominantly on academicians, research scholars belong to science and engineering, managers, scientists, technicians, and other professionals in the field of qualitative research. This book is comprehended from different sources of research in Science and Technology. On the first occasion, the task of providing researchers with a broad view of the relationship between science and technology. The second reason for writing the book was the need to fill a gap in academics and research. While many excellent books, documents, and article exist for innovative practices, we have not found a work in which we can properly understand the content that the researcher needs to understand. So, after much deliberation, we decided to collect all quality efforts in one string. At the most basic level, this book is trying to show research scholars; what science, technology, and innovations are all about. It cannot study or gain knowledge of that part and is at a level that most researchers should find clear and understandable. Our goal was to develop content that will help researchers who are beginning to use innovative practices. We hope to meet the needs of academicians, research scholars who are being encouraged to incorporate more reading and writing in the field of science and technology. In summary, this book is targeted to the needs of individuals engaged in quality research activities in science and technology. Our goal is to present the topics of creativity and innovation to this audience in a way that enables them to incorporate new skills into their daily work. We would like to thank all the contributors who have made the production of this book so fascinating and enjoyable. Their scholarship and dedicated commitment and motivation to 'getting it right' are the keys to the book's quality, and we greatly appreciate their good nature over many months in the face of our editorial demands and time limits. We are also grateful for using their texts, ideas, and critical remarks We would also like to thank Prof Dr Nilam N Ghuge, Prof Dr D Ayub Khan Dawood, Prof Dr Vilas A Pharande, all reviewers and all authors for their help in consolidating the interdisciplinary of the book. We are grateful to all the 18 institutions for their support. It will not be possible to bring out this edition.

Cybercrime in Progress Thomas J Holt, Adam M Bossler, 2015-12-14 The emergence of the World Wide Web, smartphones, and computers has transformed the world and enabled individuals to engage in crimes in a multitude of new ways. Criminological scholarship on these issues has increased dramatically over the last decade, as have studies on ways to prevent and police these offenses. This book is one of the first texts to

provide a comprehensive review of research regarding cybercrime, policing and enforcing these offenses, and the prevention of various offenses as global change and technology adoption increases the risk of victimization around the world. Drawing on a wide range of literature, Holt and Bossler offer an extensive synthesis of numerous contemporary topics such as theories used to account for cybercrime, policing in domestic and transnational contexts, cybercrime victimization and issues in cybercrime prevention. The findings provide a roadmap for future research in cybercrime, policing, and technology, and discuss key controversies in the existing research literature in a way that is otherwise absent from textbooks and general cybercrime readers. This book is an invaluable resource for academics, practitioners, and students interested in understanding the state of the art in social science research. It will be of particular interest to scholars and students interested in cybercrime, cyber-deviance, victimization, policing, criminological theory, and technology in general.

Food Security, Biological Diversity and Intellectual Property Rights Muriel Lightbourne,2016-04-15 This volume advances the claim that the FAO International Treaty on Plant Genetic Resources for Food and Agriculture (ITPGRFA) adopted in 2001 is the only existing international agreement with the potential to promote food security, conservation of biodiversity and equity. However, for germplasm-rich countries, national interests come into conflict with the global interest. This work shows that the pursuit of national interests is counterproductive when it comes to maintaining genetic resources, food-security and rent-seeking and that optimally, the coverage of the FAO Treaty should be widened to apply to all crops.
