Places of Silence, Journeys of Freedom Eugenia C. DeLamotte,2016-11-11 Alice Walker has described the Barbadian American novelist Paule Marshall as unequaled in intelligence, vision, craft, by anyone of her generation, to put her contributions to our literature modestly. Such praise has echoed through reviews and analyses of Marshall's work since the 1959 publication of *Brown Girl, Brownstones*, a novel followed by *The Chosen Place, the Timeless People* (1969), *Praisesong for the Widow* (1984), and *Daughters* (1991). *Places of Silence, Journeys of Freedom* is the first study of Paule Marshall's work to focus explicitly on her contribution to feminism. It is also the first to identify one of her original contributions to narrative art—a technique of superimposition or double exposure through which her books have explored topics now at the heart of feminist debate. Centered around the subject of voice and silence, these issues include the interrelation between women's power and powerlessness, the interpenetration of the political and economic world with the world of the psyche, and the mechanisms through which oppressions on the basis of race, class, and gender operate as mutually shaping forces.

God in Sound and Silence Danielle Anne Lynch,2018-06-22 Music, by its indeterminate levels of meaning, poses a necessary challenge to a theology bound up in words. Its distinctive nature as temporal and embodied allows a unique point of access to theological understanding. Yet music does not exist in a cultural vacuum, conveying universal truths, but is a part of the complex nature of human lives. This understanding of music as theology stems from a conviction that music is a theological means of knowing: knowing something indeterminate, yet meaningful. This is an exploration of the means by which music might say something otherwise unsayable, and in doing so, allow for an encounter with the mystery of God.

Neurodegeneration Dennis Dickson,Roy O. Weller,2011-11-07 Most textbooks on neurodegenerative disorders have used a classification scheme based upon either clinical syndromes or anatomical distribution of the pathology. In contrast, this book looks to the future and uses a classification based upon molecular mechanisms, rather than clinical or anatomical boundaries. Major advances in molecular genetics and the application of biochemical and immunocytochemical techniques to neurodegenerative disorders have generated this new approach. Throughout most of the current volume, diseases are clustered according to the proteins that accumulate within cells (e.g. tau, α -synuclein and TDP-43) and in the extracellular compartments (e.g. β -amyloid and prion proteins) or according to a shared pathogenetic mechanism, such as trinucleotide repeats, that are a feature of specific genetic disorders. Chapters throughout the book conform to a standard lay-out for ease of access by the reader and are written by a panel of International Experts Since the first edition of this book, major advances have been made in the discovery of common molecular mechanisms between many neurodegenerative diseases most notably in the frontotemporal lobar degenerations (FTLD) and motor neuron disease or amyotrophic lateral sclerosis. This book will be essential reading for clinicians, neuropathologists and basic neuroscientists who require the firm up-to-date knowledge of mechanisms, diagnostic pathology and genetics of Neurodegenerative diseases that is required for progress in therapy and management.

The Waves Virginia Woolf,1998 One of Woolf's most experimental novels, *The Waves* presents six characters in monologue - from morning until night, from childhood into old age - against a background of the sea. The result is a glorious chorus of voices that exists not to remark on the passing of events but to celebrate the connection between its various individual parts.

Blanks, Space, Print, and Void in English Renaissance Literature Jonathan Sawday,2023-07-20 *Blanks, Space, Print, and Void in English Renaissance Literature* is an inquiry into the empty spaces encountered not just on the pages of printed books in c.1500-1700, but in Renaissance culture more generally. The book argues that print culture in the sixteenth and seventeenth centuries helped to foster the modern idea of the 'gap' (where words, texts, images, and ideas are constructed as missing, lost, withheld, fragmented, or perhaps never devised in the first place). It re-imagines how early modern people reacted not just to printed books and documents of many different kinds, but also how the very idea of emptiness or absence began to be fashioned in a way which still surrounds us. Jonathan Sawday leads the reader through the entire landscape of early modern print culture, discussing topics such as: space and silence; the exploration of the vacuum; the ways in which race and racial identity in early modern England were constructed by the language and technology of print; blackness and whiteness, together with lightness, darkness, and sightlessness; cartography and emptiness; the effect of typography on reading practices; the social spaces of the page; gendered surfaces; hierarchies of information; books of memory; pages constructed as waste or vacant; the genesis of blank forms and early modern bureaucracy; the political and devotional spaces of printed books; the impact of censorship; and the problem posed by texts which lack endings or conclusions. The book itself ends by dwelling on blank or empty pages as a sign of human mortality. Sawday pays close attention to the writings of many of the familiar figures in English Renaissance literary culture - Sidney, Shakespeare, Donne, Jonson, and Milton, for example - as well as introducing readers to a host of lesser-known figures. The book also discusses the work of numerous women writers from the period, including Aphra Behn, Ann Bradstreet, Margaret Cavendish, Lady Jane Gray, Lucy Hutchinson, $\text{\textit{\AE}}$ melia Lanyer, Isabella Whitney, and Lady Mary Wroth.

In the Waves Rachel Lance,2021-04-06 One of The Most Fascinating Books WIRED Read in 2020 One part science book, one part historical narrative, one part memoir . . . harrowing and inspiring.”—The Wall Street Journal How a determined scientist cracked the case of the first successful—and disastrous—submarine attack On the night of February 17, 1864, the tiny Confederate submarine HL Hunley made its way toward the USS Housatonic just outside Charleston harbor. Within a matter of hours, the Union ship’s stern was blown open in a spray of wood planks. The explosion sank the ship, killing many of its crew. And the submarine, the first ever to be successful in combat, disappeared without a trace. For 131 years the eight-man crew of the HL Hunley lay in their watery graves, undiscovered. When finally raised, the narrow metal vessel revealed a puzzling sight. There was no indication the blast had breached the hull, and all eight men were still seated at their stations—frozen in time after more than a century. Why did it sink? Why did the men die? Archaeologists and conservationists have been studying the boat and the remains for years, and now one woman has the answers. In the Waves is much more than just a military perspective or a technical account. It’s also the story of Rachel Lance’s single-minded obsession spanning three years, the story of the extreme highs and lows in her quest to find all the puzzle pieces of the Hunley. Balancing a gripping historical tale and original research with a personal story of professional and private obstacles, In the Waves is an enthralling look at a unique part of the Civil War and the lengths one scientist will go to uncover its secrets.

Body and Force in Music Youn Kim,2022-09-01 Our understanding of music is inherently metaphorical, and metaphoricity pervades all sorts of musical discourses, be they theoretical, analytical, philosophical, pedagogical, or even scientific. The notions of body and force are the two most pervasive and comprehensive scientific metaphors in musical discourse. Throughout various intertwined contexts in history, the body-force pair manifests multiple layers of ideological frameworks and permits the conceptualization of music in a variety of ways. Youn Kim investigates these concepts of body and force in the emerging field of music psychology in the late nineteenth and early twentieth centuries. The field’s discursive space spans diverse contexts, including psychological theories of auditory perception and cognition, pedagogical theories on the performer’s bodily mechanism, speculative and practical theories of musical rhythm, and aesthetical discussion of the power of music. This investigation of body and force aims to illuminate not just the past scene of music psychology but also the notions of music that are being constructed at present.
