RNA Exosome Torben Heick Jensen, 2011-06-29 The diversity of RNAs inside living cells is amazing. We have known of the more “classic” RNA species: mRNA, tRNA, rRNA, snRNA and snoRNA for some time now, but in a steady stream new types of molecules are being described as it is becoming clear that most of the genomic information of cells ends up in RNA. To deal with the enormous load of resulting RNA processing and degradation reactions, cells need adequate and efficient molecular machines. The RNA exosome is arising as a major facilitator to this effect. Structural and functional data gathered over the last decade have illustrated the biochemical importance of this multimeric complex and its many co-factors, revealing its enormous regulatory power. By gathering some of the most prominent researchers in the exosome field, it is the aim of this volume to introduce this fascinating protein complex as well as to give a timely and rich account of its many functions. The exosome was discovered more than a decade ago by Phil Mitchell and David Tollervey by its ability to trim the 3’ end of yeast, *S. cerevisiae*, 5. 8S rRNA. In a historic account they laid out the events surrounding this identification and the subsequent birth of the research field. In the chapter by Kurt Januszyk and Christopher Lima the structural organization of eukaryotic exosomes and their evolutionary counterparts in bacteria and archaea are discussed in large part through presentation of structures.

Neutrons for Science Bernard Jacrot,Translator Ron Ghosh,2021 In 1967, France and Germany agreed to cooperate on the construction and commissioning of a nuclear reactor dedicated to research in physics, chemistry and biology. This book tells the story of the beginnings of this project and shows how, with the right organisation, it was possible to optimise the use of the reactor.

Models of Sustainable Development Sylvie Faucheux,David Pearce,David William Pearce,John L. R. Proops,1996 A rigorous approach to environmental sustainability suitable for researchers and graduate students in environmental economics. Surveys a wide range of approaches to modeling sustainable development, including neo-classical, evolutionary, ecological economics, and neo-Ricardian. Examines how they deal with such fundamental issues as equity between and within generations, the very long term, the irreversibility of ecological change, uncertainty and system complexity, and processes of technological change. Travel Writing Peter Ferry, 2017-11-07 “A rich character study and a twisty whodunit, adding one more voice to the lively conversation about the boundaries between memoir and fiction” (Entertainment Weekly). Pete Ferry, our narrator, teaches high school English in the wealthy Chicago suburb of Lake Forest and moonlights as a travel writer. On his way home after work one evening, he witnesses a car accident that kills a beautiful woman named Lisa Kim. But was it an accident? Could Pete have prevented it? And did it actually happen, or is this just an elaborate tale he concocts to impart the power of story to his teenage students? Why can’t he stop thinking about Lisa Kim? And what might his obsession with her mean to his relationship with his girlfriend, Lydia? With humor, tenderness, and suspense, *Travel Writing* takes readers on fascinating journeys, both geographical and psychological, and delves into the notion that the line between fact and fiction is often negotiable. “A great and edifying read.” —Dave Eggers, international bestselling author of *The Circle* “*Travel Writing* is an absolute pleasure to read. It is ensnaring, funny, suspenseful, smart and poignant.” —Chicago Tribune “Ferry builds his quietly tricky tale around an English teacher’s amateur investigation into a traffic fatality . . . Earnest, engrossing and affecting.” —Publishers Weekly

Transnational Hispaniola April J. Mayes, Kiran C. Jayaram, 2022-06-21 In addition to sharing the Caribbean island of Hispaniola, Haiti and the Dominican Republic share a complicated and at times painful history. Yet *Transnational Hispaniola* shows that there is much more to the two nations’ relationship than their perceived antagonism. Rejecting dominant narratives that reinforce opposition between the two sides of the island, contributors to this volume highlight the connections and commonalities that extend across the border, mapping new directions in Haitianist and Dominicanist scholarship. Exploring a variety of topics including European colonialism, migration, citizenship, sex

tourism, music, literature, political economy, and art, contributors demonstrate that alternate views of Haitian and Dominican history and identity have existed long before the present day. From a moving section on passport petitions that reveals the familial, friendship, and communal networks across Hispaniola in the nineteenth century to a discussion of the shared music traditions that unite the island today, this volume speaks of an island and people bound together in a myriad of ways. Complete with reflections and advice on teaching a transnational approach to Haitian and Dominican studies, this agenda-setting volume argues that the island of Hispaniola and its inhabitants should be studied in a way that contextualizes differences, historicizes borders, and recognizes cross-island links. Student Debt Sandy Baum, 2016-07-20 This book analyzes reliable evidence to tell the true story of student debt in America. One of the nation's foremost experts on college finance, Sandy Baum exposes how misleading the widely accepted narrative on student debt is. Baum combines data, research, and analysis to show how the current discourse obscures serious problems, risks misdirecting taxpayer dollars, and could deprive too many Americans of the educational opportunities they deserve. This book and its policy recommendations provide the basis for a new and more constructive national agenda to make paying for college more manageable.

Epidemics of Plant Diseases Jürgen Kranz, 2012-12-06 In this volume experts present the latest

status of mathematical and statistical methods in use for the analysis and modeling of plant disease epidemics. Topics treated are - methods in multivariate analyses, ordination and classification, - modeling of temporal and spatial aspects of air- and soilborne diseases, - methods to analyse and describe competition among subpopulations, e.g. pathogen races and - their interaction with resistance genes of host plants - assemblage and use of models - mathematical simulation of epidemics. New chapters on the modeling of the spreading of diseases in air and in soil are included in this second edition.
