Textiles and Clothing Mohd Shabbir, 2019-07-12

This timely and important book aims to help achieve a more sustainable textile industry; researchers from both textile and environmental domains will benefit from reading it. Since it is imperative to rehabilitate our damaged environmental ecosystems, there is a pressing demand for more sustainable green processes in the textile and clothing industry. As a consequence, greater emphasis needs to be placed on research into eco-friendly processes particularly suited for this industry. With this goal in mind, all environmental aspects relating to the textile and clothing industry are discussed in this book in four broad areas: Highlights the negative impact on the environment by textile industries; Discusses textiles finishing by natural or eco-friendly means; Promotes natural dyes as environment-friendly alternatives to synthetics; Reviews textile effluents remediation via chemical, physical and bioremediation. Included in the 11 informative chapters are topics covering the correlation between the environment and the processing and utilization of textiles and clothing. The book opens with a discussion on the

direct impact that the textile industry has on the environment. The hazardous environmental consequences that synthetic dyes used to color textiles have on the environment are highlighted in the next chapter. Greener alternatives to dyeing are discussed in detail in the next chapters followed by a discussion of eco-friendly ways of finishing textiles. The book concludes with a section of chapters providing solutions to address the environmental hazards associated with the textile industry.

Carbon-Ion Radiotherapy Hirohiko Tsujii, Tadashi Kamada, Toshiyuki Shirai, Koji Noda, Hiroshi Tsuji, Kumiko Karasawa, 2013-12-25 This book serves as a practical guide for the use of carbon ions in cancer radiotherapy. On the basis of clinical experience with more than 7,000 patients with various types of tumors treated over a period of nearly 20 years at the National Institute of Radiological Sciences, step-by-step procedures and technological development of this modality are highlighted. The book is divided into two sections, the first covering the underlying principles of physics and biology, and the second section is a systematic review by tumor site, concentrating on the role of therapeutic techniques and the pitfalls in treatment planning. Readers will learn of the superior outcomes obtained with carbon-ion therapy for various types of tumors in terms of local control and toxicities. It is essential to understand that the carbon-ion beam is like a two-edged sword: unless it is used properly, it can increase the risk of severe injury to critical organs. In early series

of dose-escalation studies, some patients experienced serious adverse effects such as skin ulcers, pneumonitis, intestinal ulcers, and bone necrosis, for which salvage surgery or hospitalization was required. To preclude such detrimental results, the adequacy of therapeutic techniques and dose fractionations was carefully examined in each case. In this way, significant improvements in treatment results have been achieved and major toxicities are no longer observed. With that knowledge, experts in relevant fields expand upon techniques for treatment delivery at each anatomical site, covering indications and optimal treatment planning. With its practical focus, this book will benefit radiation oncologists, medical physicists, medical dosimetrists, radiation therapists, and senior nurses whose work involves radiation therapy, as well as medical oncologists and others who are interested in radiation therapy.

America's "war on Terrorism" Michel

Chossudovsky,2005 In this new and expanded edition of Michel Chossudovsky's 2002 best-seller, the author blows away the smokescreen put up by the mainstream media, that 9/11 was an attack on America by Islamic terrorists. This expanded edition, which includes twelve new chapters focuses on the use of 9/11 as a pretext for the invasion and illegal occupation of Iraq, the militarisation of justice and law enforcement and the repeal of democracy. According to Chossudovsky, the war on terrorism is a complete fabrication based on the illusion that one man, Osama bin Laden, outwitted the \$40 billion-a-year American intelligence apparatus. The war on terrorism is a war of conquest. Globalisation is the final march to the New World Order, dominated by Wall Street and the U.S. military-industrial complex. September 11, 2001 provides a justification for waging a war without borders. Washington's agenda consists in extending the frontiers of the American Empire to facilitate complete U.S. corporate control, while installing within America the institutions of the Homeland Security State. Chossudovsky peels back layers of rhetoric to reveal a complex web of deceit aimed at luring the American people and the rest of the world into accepting a military solution which threatens the future of humanity.

How Not to Network a Nation Benjamin

Peters,2016-03-25 How, despite thirty years of effort, Soviet attempts to build a national

computer network were undone by socialists who seemed to behave like capitalists. Between 1959 and 1989, Soviet scientists and officials made numerous attempts to network their nation—to construct a nationwide computer network. None of these attempts succeeded, and the enterprise had been abandoned by the time the Soviet Union fell apart. Meanwhile, ARPANET, the American precursor to the Internet, went online in 1969. Why did the Soviet network, with top-level scientists and patriotic incentives, fail while the American network succeeded? In *How Not to Network a Nation*, Benjamin Peters reverses the usual cold war dualities and argues that the American ARPANET took shape thanks to well-managed state subsidies and collaborative research environments and the Soviet network projects stumbled because of unregulated competition among self-interested institutions, bureaucrats, and others. The capitalists behaved like socialists while the socialists behaved like capitalists. After examining the midcentury rise of cybernetics, the science of self-governing systems, and the emergence in the Soviet Union of economic cybernetics, Peters complicates this uneasy role reversal while chronicling the various Soviet attempts to build a “unified information network.” Drawing on previously unknown archival and historical materials, he focuses on the final, and most ambitious of these projects, the All-State Automated System of Management (OGAS), and its principal promoter, Viktor M. Glushkov. Peters describes the rise and fall of OGAS—its theoretical and practical reach, its vision of a

national economy managed by network, the bureaucratic obstacles it encountered, and the institutional stalemate that killed it. Finally, he considers the implications of the Soviet experience for today's networked world.

Bayesian Networks and BayesiaLab Stefan Conrady, Lionel Jouffe, 2015-07-01

Between Understanding and Trust Meinolf Dierkes, Claudia von Grote, 2005-06-28 'This is a welcome book. The issues of public understanding of science open many questions. What does understanding mean? How does understanding translate into attitudes towards science and trust in scientists? What is the role of the mass media? The essays in this book shed light on such questions bringing insights from several disciplines. They help to define a meaningful research agenda for the future. - Professor Dorothy Nelkin, New York University

Liveable Cities Taylor & Francis

Group, 2020-09-30 This book is about the unprecedented challenges facing the world's cities as they expand and develop in response to demographic change, human aspirations and the forces of globalization. Most of that growth is taking place in the developing countries and it is here that the megacities (places with over ten million people) seem destined to emerge during the next few decades. While there are considerable variations in the rates of city expansion between and within the different world regions, much of that growth has taken place as formless urban

sprawl, as well as the slums and squatter settlements to be found in many of the world's cities. These urbanizing areas face acute economic, social and environmental problems. They stem from, amongst other things, fundamental changes in the nature of work, the economic crisis that began in 2008, the continuing, and often growing, inequalities within the urban population and from the severe pollution and hazardous living conditions that afflict many urban communities. Without suitable action to address them, those problems are likely to worsen as the effects of human induced climate change become ever more apparent. So how can our cities become truly liveable places? Published in tandem with ISOCARP's 47th World Congress held in Wuhan, China, the many case studies in this publication describe new planning and other approaches that seek to create more sustainable, more liveable, cities.
