Spintronics Claudia Felser, Gerhard H Fecher,2013-03-20 Spintronics is an emerging technology exploiting the spin degree of freedom and has proved to be very promising for new types of fast electronic devices. Amongst the anticipated advantages of spintronics technologies, researchers have identified the non-volatile storage of data with high density and low energy consumption as particularly relevant. This monograph examines the concept of half-metallic compounds perspectives to obtain novel solutions and discusses several oxides such as perovskites, double perovskites and CrO₂ as well as Heusler compounds. Such materials can be designed and made with high spin polarization and, especially in the case of Heusler compounds, many material-related problems present in current-day 3d metal systems, can be overcome. Spintronics: From Materials to Devices provides an insight into the current

research on Heusler compounds and offers a general understanding of structure–property relationships, including the influence of disorder and correlations on the electronic structure and interfaces. Spintronics devices such as magnetic tunnel junctions (MTJs) and giant magnetoresistance (GMR) devices, with current perpendicular to the plane, in which Co₂ based Heusler compounds are used as new electrode materials, are also introduced. From materials design by theoretical methods and the preparation and properties of the materials to the production of thin films and devices, this monograph represents a valuable guide to both novices and experts in the fields of Chemistry, Physics, and Materials Science.

Metamaterials and Their Applications Dharani Sabba, 2017-11 Artificial materials such as metamaterials are gaining interest in research area in recent years owing to their extraordinary properties as implied by the word Meta meaning beyond in Greek. These metamaterials constitute periodic or nonperiodic subwavelength macro cells which exhibit properties based on the design of the macro units resulting in special materials that do not exist in nature. Though the metamaterials have achieved significant breakthroughs in theory, application of these materials requires considerable progress. Some recent advances in terms of their application comprise of revolutionary electronics, filtering of sound and light, biosensors, absorbers of electromagnetic radiation, antennas with improved performance, invisible submarines etc. These metamaterials are classified into electromagnetic (EM), chiral, tetrahertz, photonic metamaterials, tunable metamaterials with the ability to modify the frequency of refractive index, frequency selective surfaces and nonlinear metamaterials. EMs are chiefly used for optical and microwave applications such as band-pass filters, lenses, microwave couplers, antenna radomes, etc. Some of the salient characteristics of these materials are their ability to control the direction of electromagnetic radiation, achieve enhanced bandwidth and radiated power and reduce the beam-width and return loss in contrast to the conventional antennas. As the field of metamaterials is interesting and has potential for next generation applications, in this book, a compilation of research articles and reviews showcasing the synthesis, properties, numerical models and the application of these metamaterials in various fields has been illustrated. Chapters 1-6 are compilation of research and invited articles manifesting the various synthesis routes of metamaterials with chapters 4-6 focusing on the theoretical models used for the fabrication of these materials while chapters 7-9 highlight the properties of the metamaterials. The final chapters 10-17 acquaint the reader with the numerous applications of the metamaterials such as lens, absorber materials, sensors, antennas, etc. Chapter 11 is a review on the theory and application of tunable metamaterials. As this book comprises of research articles ranging from synthesis to numerical modeling of metamaterials, it will appeal to audience with strong inclination towards physics, computer simulations, material science and electronics. Also as these metamaterials are important in many defense applications, the reader will find this book compelling to research extensively and adopt these materials into advanced technologies for the safety and progress of one's nation.

CIALIS leo colton, 2019-01-04 What Is Cialis? History of the 36-Hour Weekend Erectile Dysfunction Treatment Pill Cialis (which has the nonexclusive name tadalafil) is a physician recommended tranquilizer that is utilized to treat erectile brokenness in men. It is additionally used to treat a condition called kindhearted prostatic hyperplasia, or amplification of the prostate organ. The pills themselves, which come in portions of 5, 10, and 20 mg, are almond-molded, yellow, and film-covered. Cialis is showcased worldwide by a joint endeavor of Eli Lilly and ICOS Corporation called Lilly ICOS, LLC. Cialis was given endorsement by the U.S. Sustenance and Drug Administration in November 2003. It was the third doctor prescribed medication for erectile brokenness to go onto the market after Viagra and Levitra. Cialis can be compelling for up to 36 hours, in contrast to Viagra and Levitra. Advances in Metamaterials Austin Doran,2015-01-09 This book consists of an analysis of the theory, properties and the technological applications of metamaterials for the development of new devices like invisibility cloaks, absorbers and concentrators of EM waves, etc. For developing a new device, it is important to know the electrodynamic features of the metamaterial according to which the device is created. The electromagnetic metamaterials affect EM waves and regulate the surrounding electromagnetic field by changing their permeability characteristics. It is this feature which enables the creation of electromagnetic wave scattering surfaces which utilize metamaterials. This book discusses various aspects related to metamaterials and will be beneficial for both students and experts interested in this field.

Michael Jackson Lisa D. Campbell,1994 In 1993, Michael Jackson became the target of allegations of child molestation. This book takes a look at the media's obsession with the story, not with the facts, but with the sensationalism and the potential for profits. Herbivores: Their Interactions with Secondary Plant Metabolites ,2012-12-02 This volume presents the latest research on herbivores, aquatic and terrestrial mammals and insects. The Second Edition, written almost entirely by new authors, effectively complements the initial work. It includes advances in molecular biology and microbiology, ecology, and evolutionary theory that have been achieved since the first edition was published in 1979. The book also incorporates relatively new methodologies in the area of molecular biology, like protein purification and gene cloning. Volume II, Ecological and Evolutionary Processes, also opens up entirely new subjects: The discussions of interactions have expanded to include phenomena at higher trophic levels, such as predation and microbial processing and other environmental influences. Both this and Volume I, The Chemical Participants, will be of interest to chemists, biochemists, plant and insect ecologists, evolutionary biologists, physiologists, entomologists, and agroecologists interested in both crop and animal science. Presents coevolution of herbivores and host plants Examines resource availability and its effects on secondary metabolism and herbivores Studies physiology and biochemistry of adaptation to hosts Includes tri-trophic interactions involving predators and microbes

The Veiled Web Catherine Asaro,2022-09-27 "A near-future layering of East and West, of religion and technology . . . and of love

and its loss—all woven into an intriguing tapestry.” —Diana Gabaldon, bestselling author of the *Outlander* series Winner of the Homer Award for Best Science Fiction Novel A renowned prima ballerina, Lucia del Mar is far more comfortable expressing herself through dance than with words. Shy and introverted, she spends most of her spare time on her laptop. Still, Lucia’s job forces her out of her comfort zone, which is how she winds up at a White House reception where she meets Rashid al-Jazari, the wealthy CEO of a multinational corporation. Although attracted to him, Lucia can’t help but feel awkward and shrugs off their encounter as a one-time event. Not realizing he feels a similar attraction, she never imagines Rashid will seek out her performances; he is the last person she expects to see when her dance company travels to Italy. Their reunion takes an even more unexpected turn when they’re both drugged and kidnapped. Although they overcome their abductors, it leaves them stranded in North Africa. For her own safety, Lucia agrees to marry Rashid, at least for the time being. As she recovers at his family compound in Morocco, reeling from their brush with danger, she struggles to fit into a culture she knows nothing about—and to deal with her growing feelings for Rashid. At the same time, at his secret office there, Rashid is developing a dramatic leap forward in artificial intelligence combined with virtual reality. He finds himself plunged into a fight for control of his work against powerful international forces, and caught in the middle, Lucia is swept into that battle . . . “A terrific novel, ripping a path from today’s headlines to tomorrow’s realities.” —Robert J. Sawyer, Nebula Award-winning author

Atlas of Neotropical Lepidoptera John B. Heppner, 2012-12-06 This checklist does not supercede any other because it is the first of its kind for the Neotropical region. It represents the culmination of several years preparation by the contributing authors and editor, following the initiation of the Atlas project in the autumn of 1978. The collaborators to the project continue their work, either for Atlas fascicles or for the more immediate completion of the remaining five parts of the checklist. The goal of the project is to provide a foundation work on the Neotropical Lepidoptera, illustrated to the extent possible and encompassing a detailed text covering the basic data known for each described species (original citation, synonymy, diagnosis, range, flight period and hosts). New species will be described as each author finds useful, but the primary purpose is initially to document all the species already known. Efforts to document the Lepidoptera faunas of individual countries in Latin America are relatively illogical, since in most cases upwards of 80% of the entire Neotropical fauna is represented in each country having tropical forest and, thus, such works would have to deal with most of the continental fauna. The Atlas project covers the entire region to begin with but as a cooperative project among all New World nations.

Prototyping Across the Disciplines Jennifer Roberts-Smith, Stan Ruecker, Milena Radzikowska, 2021 Fields of study progress not by understanding more about what already exists, although that is a useful step, but by making guesses about possible better futures. The guesses consist of small forays into those futures, using strategies that are variously called learning through making, research

through design, or more simply: prototyping. While traditionally associated primarily with industrial design, and more recently with software development, prototyping is now used as an important tool in areas ranging from materials engineering to landscape architecture to the digital humanities. This book collects current theories and methods of prototyping across a dozen disciplines and illustrates them through case studies of actual projects, whether in industry or the classroom. Prototyping Across the Disciplines provides context, a theoretical framework, and a set of methodologies for interdisciplinary collaboration in design. Each chapter offers a different disciplinary perspective on prototyping and provides a case study as a point of comparison for identifying commonalities and divergences in current practices. In examining the central role of prototyping in design research, this edited collection demonstrates theoretical and methodological transferability across disciplines not typically thought to be related, including post-human design, theatre, tabletop game design, landscape architecture, and arts entrepreneurship.
