**Groupware: Design, Implementation, and Use** Jörg M. Haake, Jose A. Pino, 2003-08-02 Welcome to the 8th International Workshop on Groupware (CRIWG 2002)! The previous workshops took place in Lisbon, Portugal (1995), Puerto Varas, Chile (1996), El Escorial, Spain (1997), Búzios, Brazil (1998), Cancun, Mexico (1999), Madeira, Portugal (2000), and Darmstadt, Germany (2001). CRIWG workshops follow a simple recipe for success: good papers, a small number of participants, extensive time for lively and constructive discussions, and a high level of cooperation both within and between paper sessions. CRIWG 2002 continued this tradition. CRIWG 2002 attracted 36 submissions from 13 countries, nine of them outside Ibero-America. Each of the 36 articles submitted was reviewed by at least three members of an internationally renowned Program Committee. This year we used a double-blind reviewing process, i. e. , the reviewers did not know who the authors of the papers were. In addition, the reviewers were chosen based on their expertise and we also ensured that they came from countries and institutions not related to those of the paper's authors. This reviewer assignment worked remarkably well, as indicated by the high average confidence value the reviewers gave their own reviews. This means that papers were usually reviewed by experts in the paper's topic. As a consequence, reviews were usually quite extensive and contained many suggestions for improvements. I would like to thank all the members of the Program Committee for their hard work, which I am sure contributed to improving the quality of the final articles.

**Product Modelling for Computer Integrated Design and Manufacture** Michael Pratt, R.D. Sriram, Michael J. Wozny, 2016-01-09 This state-of-the-art text explores developments in geometric modeling, product modeling and their applications. In particular, it looks at the means by which product geometry emerges from the conceptual stages of design, and the use of geometric reasoning for applications downstream of design, including manufacture and assembly. Much existing design research is either totally geometry based or totally non-geometric, and the interface between the two areas is of intense interest to industry, as well as being crucial for the successful development of integrated systems for design and manufacture. This interface is currently not well understood and the book makes a significant contribution towards its understanding. This book is essential reading for technical managers and research and development engineers.

Atlas of Surgical Pathology Grossing Monica B. Lemos,Ekene Okoye,2019-07-03 This book is a unique surgical pathology grossing atlas, comprised of a collection of photos of various anatomic specimens frequently encountered in routine and frozen surgical pathology practice, including various organ systems. The photos in this atlas have been collected over many years of practicing surgical pathology in one of the largest medical centers in the world, and include emphasis on important anatomic landmarks and explanations on how to properly orient, section and sample anatomic specimens. The use of actual gross images allows readers to more readily apply the grossing tips to actual specimens that they encounter at the grossing bench. Each chapter is arranged by organ system and includes essential tips for grossing each specimen and sample dictations with all the essential elements that must be addressed for proper assessment of each organ specimen. Written by expert pathologists, Atlas of Surgical Pathology Grossing is an excellent resource for pathologists, medical and pathology assistant students, residents, both in surgery and pathology, and pathology assistants.

Lutheran Churches in Early Modern Europe Andrew Spicer,2016-12-05 Until recently the impact of the Lutheran Reformation has been largely regarded in political and socio-economic terms, yet for most people it was not the abstract theological debates that had the greatest impact upon their lives, but what they saw in their parish churches every Sunday. This collection of essays provides a coherent and interdisciplinary investigation of the impact that the Lutheran Reformation had on the appearance, architecture and arrangement of early modern churches. Drawing upon recent research being undertaken by leading art historians and historians on Lutheran places of worship, the volume emphasises often surprising levels of continuity, reflecting the survival of Catholic fixtures, fittings and altarpieces, and exploring how these could be remodelled in order to conform with the tenets of Lutheran belief. The volume not only addresses Lutheran art but also the way in which the architecture of their churches reflected the importance of preaching and the administration of the sacraments. Furthermore the collection is committed to extending these discussions beyond a purely German context, and to look at churches not only within the Holy Roman Empire, but also in Scandinavia, the Baltic States as well as towns dominated by Saxon communities in areas such as in Hungary and Transylvania. By focusing on ecclesiastical 'material culture' the collection helps to place the art and architecture of Lutheran places of worship into the historical, political and theological context of early modern Europe.
