The Insomniacs Guide to Digital Clock Watching Joe R. R.

"Rex" Shaffer, 2018-03-06 When I am to be involved in a project or some other activity, either personal or involving other people, and whether I am in charge or a contributor, my brain wants me to be fully prepared. This happens whether I am providing ideas or concepts during the planning phase, providing status or developing work-a-rounds during the implementation phase, or identifying lessons learned during the evaluation phase. The problem is that my brain prefers that I get prepared at night when I should be sleeping. When I try to escape these fits of insomnia by thinking of something else, my brain has a good memory and brings me back to preparation. I started developing Digital Clock Watching as an escape mechanism. It is based on the card game poker, and it worked! Watching my digital clock for, and anticipating, different combinations of numbers was complex enough to keep my brain occupied, but with one minute between display changes, it was slow enough that I could go back to sleep. Watching for of-a-kind and straight combinations was straightforward and easy, but flushes and straight-flushes were a problem, which was eventually solved. When I told friends about my game, they became interested and told me that I should document it. Since all digital clocks should display the same numbers at any given time, it is a single-player game, but my friends later asked whether I could make it competitive. The result is this book.

A Mosaic of Computational Topics: from Classical to Novel
M.H. ter Beek,M. Koutny,G. Rozenberg,2020-11-20 This book, *A Mosaic of Computational Topics: from Classical to Novel*, is a collection of papers published to honor Professor Jetty Kleijn on the occasion of her 65th birthday. The scope and reach of her research is truly broad. She has made significant and lasting contributions in several research areas, both through the solving of challenging problems and in her pioneering of new research directions. She has published influential papers contributing to the foundations of computer science, in particular, in the area of formal languages and automata theory; to concurrency theory, in particular, Petri nets; and to natural computing, in particular bio-inspired computing and the computational modeling of bio-processes. A significant part of Professor Kleijn's research portfolio is interdisciplinary, including her work on the Petri net modeling of biological processes and the development of novel models of information processing in bio-systems such as reaction systems. She is also passionately engaged in promoting the involvement of women in computer science. Jetty and her work are well-recognized by the scientific community, a fact demonstrated by the enthusiastic response to the invitation to contribute to this book, and the 14 carefully refereed papers collected together here explore a number of research topics that are either directly or indirectly related to research directions pursued by Jetty Kleijn in the course of her career.
