The New Posidippus Posidippe de Pella, Posidippus (of Pella), 2005-09-22 The Milan Papyrus (P. Mil. Volg. VIII. 309), containing a collection of epigrams apparently all by Posidippus of Pella, provides one of the most exciting new additions to the corpus of Greek literature in decades. It not only contains over 100 previously unknown epigrams by one of the most prominent poets of the third century BC, but as an artefact it constitutes our earliest example of a Greek poetry book. In addition to a poetic translation of the entire corpus of Posidippus' poetry, this volume contains essays about Posidippus by experts in the fields of papyrology, Hellenistic and Augustan literature, Ptolemaic history, and Graeco-Roman visual culture.

A General History of Horology Turner, 2022-02-02 A General History of Horology describes instruments used for the finding and measurement of time from Antiquity to the 21st century. In geographical scope it ranges from East Asia to the Americas. The instruments described are set in their technical and social contexts, and there is also discussion of the literature, the historiography and the collecting of the subject. The book features the use of case studies to represent larger topics that cannot be completely covered in a single book. The international body of authors have endeavoured to offer a fully world-wide survey accessible to students, historians, collectors, and the general reader, based on a firm understanding of the technical basis of the subject. At the same time as the work offers a synthesis of current knowledge of the subject, it also incorporates the results of some fundamental, new and original research.

David King, 2005-06-01 This is the first investigation of one of the main interests of astronomy in Islamic civilization, namely, timekeeping by the sun and stars and the regulation of the astronomically-defined times of Muslim prayer. The study is based on over 500 medieval astronomical manuscripts first identified by the author, now preserved in libraries all over the world and originally from the entire Islamic world from the Maghrib to Central Asia and the Yemen. The materials presented provide new insights into the early development of the prayer ritual in Islam. They also call into question the popular notion that religion could not inspire serious scientific activity. Only one of the hundreds of astronomical tables discussed here was known in medieval Europe, which is one reason why the entire corpus has remained unknown until the present. A second volume, also to be published by Brill, deals with astronomical instruments for timekeeping and other computing devices.
