Genes, Memes, Culture, and Mental Illness Hoyle Leigh, 2010-06-14 What produces mental illness: genes, environment, both, neither? The answer can be found in memes—replicable units of information linking genes and environment in the memory and in culture—whose effects on individual brain development can be benign or toxic. This book reconceptualizes mental disorders as products of stressful gene-meme interactions and introduces a biopsychosocial template for meme-based diagnosis and treatment. A range of therapeutic modalities, both broad-spectrum (meditation) and specific (cognitive-behavioral), for countering negative memes and their replication are considered, as are possibilities for memetic prevention strategies. In this book, the author outlines the roles of genes and memes in the evolution of the human brain; elucidates the creation, storage, and evolution of memes within individual brains; examines culture as a carrier and supplier of memes to the individual; provides examples of gene-meme interactions that can result in anxiety, depression, and other disorders; proposes a multiaxial gene-meme model for diagnosing mental illness; identifies areas of meme-based prevention for at-risk children; and defines specific syndromes in terms of memetic symptoms, genetic/ memetic development, and meme-based treatment.

We Gotta Get Out of This Place Doug Bradley, Craig Werner, 2016-01-06 “The diversity of voices and songs reminds us that the home front and the battlefield are always connected and that music and war are deeply intertwined.” —Heather Marie Stur, author of *21 Days to Baghdad* For a Kentucky rifleman who spent his tour trudging through Vietnam’s Central Highlands, it was Nancy Sinatra’s “These Boots Are Made for Walkin’.” For a black marine distraught over the assassination of Martin Luther King Jr., it was Aretha Franklin’s “Chain of Fools.” And for countless other Vietnam vets, it was “I Feel Like I’m Fixin’ to Die” or the song that gives this book its title. In *We Gotta Get Out of This Place*, Doug Bradley and Craig Werner place popular music at the heart of the American experience in Vietnam. They explore how and why U.S. troops turned to music as a way of connecting to each other and the World back home and of coping with the complexities of the war they had been sent to fight. They also demonstrate that music was important for every group of Vietnam veterans—black and white, Latino and Native American, men and women, officers and “grunts”—whose personal reflections drive the book’s narrative. Many of the voices are those of ordinary soldiers, airmen, seamen, and marines. But there are also “solo” pieces by veterans whose writings have shaped our understanding of the war—Karl Marlantes, Alfredo Vea, Yusef Komunyakaa, Bill Ehrhart, Arthur Flowers—as well as songwriters and performers whose music influenced soldiers’ lives, including Eric Burdon, James Brown, Bruce Springsteen, Country Joe McDonald, and John Fogerty. Together their testimony taps into memories—individual and cultural—that capture a central if often overlooked component of the American war in Vietnam.

Semiconductor Device Fundamentals Robert F. Pierret, 1996 Although roughly a half-century old, the field of study associated with semiconductor devices continues to be dynamic and exciting. New and improved devices are being developed at an almost frantic pace. While the number of devices in complex integrated circuits increases and the size of chips decreases, semiconductor properties are now being engineered to fit design specifications. *Semiconductor Device Fundamentals* serves as an excellent introduction to this fascinating field. Based in part on the Modular Series on Solid State Devices, this textbook explains the basic terminology, models, properties, and concepts associated with semiconductors and semiconductor devices. The book provides detailed insight into the internal workings of building block device structures and systematically develops the analytical tools needed to solve practical device problems.

Microprocessors Robert B. Reese, 2005 This book is a first course in microprocessors using the PIC18Fxx2 microprocessor with the only prerequisites being basic digital design and exposure to either C or C++ programming. The topic coverage is wide, with a mixture of software and hardware topics.

Polymeric Gene Delivery Systems Yiyun Cheng, 2018-09-04 The series Topics in Current Chemistry Collections presents critical reviews from the journal Topics in Current Chemistry organized

in topical volumes. The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology, medicine and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience. Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data, but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field. The chapter Polymeric Nanoparticle-Mediated Gene Delivery for Lung Cancer Treatment is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.

Computer Games I David N.L. Levy, 2012-12-06 Computer Games I is the first volume in a two part compendium of papers covering the most important material available on the development of computer strategy games. These selections range from discussions of mathematical analyses of games, to more qualitative concerns of whether a computer game should follow human thought processes rather than a brute force approach, to papers which will benefit readers trying to program their own games. Contributions include selections from the major players in the development of computer games: Claude Shannon whose work still forms the foundation of most contemporary chess programs, Edward O. Thorpe whose invention of the card counting method caused Las Vegas casinos to change their blackjack rules, and Hans Berliner whose work has been fundamental to the development of backgammon and chess games.

Nature-Inspired Algorithms and Applied Optimization Xin-She Yang, 2017-10-08 This book reviews the state-of-the-art developments in nature-inspired algorithms and their applications in various disciplines, ranging from feature selection and engineering design optimization to scheduling and vehicle routing. It introduces each algorithm and its implementation with case studies as well as extensive literature reviews, and also includes self-contained chapters featuring theoretical analyses, such as convergence analysis and no-free-lunch theorems so as to provide insights into the current nature-inspired optimization algorithms. Topics include ant colony optimization, the bat algorithm, B-spline curve fitting, cuckoo search, feature selection, economic load dispatch, the firefly algorithm, the flower pollination algorithm, knapsack problem, octonian and quaternion representations, particle swarm optimization, scheduling, wireless networks, vehicle routing with time windows, and maximally different alternatives. This timely book serves as a practical guide and reference resource for students, researchers and professionals.

Annals of Scientific Society for Assembly, Handling and Industrial Robotics Thorsten Schüppstuhl, Kirsten Tracht, Dominik Henrich, 2020-08-21 This Open Access proceedings present a good overview of the current research landscape of industrial robots. The objective of MHI Colloquium is a successful networking at academic and management level. Thereby the colloquium is focussing on a high level academic exchange to distribute the obtained research results, determine synergetic effects and trends, connect the actors personally and in conclusion strengthen the research field as well as the MHI community. Additionally there is the possibility to become acquainted with the organizing institute. Primary audience are members of the scientific association for assembly, handling and industrial robots (WG MHI).

Beowulf Bryher, 2020-10-14 The author of *Roman Wall* and other well received historical novels portrays here a more recent period of history, that of the Blitz in the London of World War II. Her portrayal of the living out of wartime days with their drabness and danger consists of cannily arranged sketches of over a dozen folk whose lives touch upon or center about the homely, comforting teashop run by two elderly ladies and fittingly named the Warming Pan. Selina Tippet is

the motherly figure who presides and succors, Angelina is her militant partner who goes to battle for food rations and who brings home the plaster bulldog Beowulf as symbol of resolution. When the Warming Pan is blasted to nothingness, Beowulf remains unscathed -- and, while Angelina rejoices and thinks of hawking cakes, Selina laughs and weeps over the fact that she will never have to worry about overdue rent again and is embarrassed by the solicitude of her friends. There is an immediacy and a sharp etching in the presentation of people who seem to be caught candid and unaware by the author: the lonely widowed septuagenarian painter who hangs out at the teashop and who is mercifully spared complete poverty by the blast; young Eve, who has found freedom in the city and who worries that her friend Joe feels alive only in war; Ruby the waitress who discovers a friend she has come to mourn, alive beside her ruined dwelling; the retired colonel whom no one will put back in 'harness' ... A small, distinctively cut and polished piece.--Kirkus reviews

Sustainable Energy Systems Planning, Integration and Management Kim Guldstrand

Larsen,2020-01-21 Energy systems worldwide are undergoing major transformation as a consequence of the transition towards the widespread use of clean and sustainable energy sources. Basically, this involves massive changes in technical and organizational levels together with tremendous technological upgrades in different sectors ranging from energy generation and transmission systems down to distribution systems. These actions generate huge science and engineering challenges and demands for expert knowledge in the field to create solutions for a sustainable energy system that is economically, environmentally, and socially viable while meeting high security requirements. This book covers these promising and dynamic areas of research and development, and presents contributions in sustainable energy systems planning, integration, and management. Moreover, the book elaborates on a variety of topics, ranging from design and planning of small- to large-scale energy systems to the operation and control of energy networks in different sectors, namely electricity, heat, and transport.

Medications for Opioid Use Disorder Save Lives National Academies of Sciences, Engineering, and Medicine,Health and Medicine Division,Board on Health Sciences Policy,Committee on Medication-Assisted Treatment for Opioid Use Disorder,2019-06-16 The opioid crisis in the United States has come about because of excessive use of these drugs for both legal and illicit purposes and unprecedented levels of consequent opioid use disorder (OUD). More than 2 million people in the United States are estimated to have OUD, which is caused by prolonged use of prescription opioids, heroin, or other illicit opioids. OUD is a life-threatening condition associated with a 20-fold greater risk of early death due to overdose, infectious diseases, trauma, and suicide. Mortality related to OUD continues to escalate as this public health crisis gathers momentum across the country, with opioid overdoses killing more than 47,000 people in 2017 in the United States. Efforts to date have made no real headway in stemming this crisis, in large part because tools that already exist—like evidence-based medications—are not being deployed to maximum impact. To support the dissemination of accurate patient-focused information about treatments for addiction, and to help provide scientific solutions to the current opioid crisis, this report studies the evidence base on medication assisted treatment (MAT) for OUD. It examines available evidence on the range of parameters and circumstances in which MAT can be effectively delivered and identifies additional research needed.

Semiconductor Fundamentals Robert F. Pierret,1988-01-01 This book presents those terms, concepts, equations, and models that are routinely used in describing the operational behavior of solid state devices. The second edition provides many new problems and illustrative examples.
