Textile Technology and Design Deborah Schneiderman, Alexa Griffith Winton, 2016-01-28 Textile Technology and Design addresses the critical role of the interior at the intersection of design and technology, with a range of interdisciplinary arguments by a wide range of contributors: from design practitioners to researchers and scholars to aerospace engineers. Chapters examine the way in which textiles and technology – while seemingly distinct – continually inform each other through their persistent overlapping of interests, and eventually coalesce in the practice of interior design. Covering all kinds of interiors from domestic (prefabricated kitchens and 3D wallpaper) to extreme (underwater habitats and space stations), it features a variety of critical aspects including pattern and ornament, domestic technologies, craft and the imperfect, gender issues, sound and smart textiles. This book is essential reading for students of textile technology, textile design and interior design.

Computer-Aided Design of User Interfaces VI Victor Lopez Jaquero, Francisco Montero Simarro, Jose Pascual Molina Masso, Jean Vanderdonckt, 2010-03-10 Computer-Aided Design of User Interfaces VI gathers the latest experience of experts, research teams and leading organisations involved in computer-aided design of user interactive applications. This area investigates how it is desirable and possible to support, to facilitate and to speed up the development life cycle of any interactive system: requirements engineering, early-stage design, detailed design, development, deployment, evaluation, and maintenance. In particular, it stresses how the design activity could be better understood for different types of advanced interactive ubiquitous computing, and multi-device environments.

Border Ecology Ila Nicole Sheren, 2023-03-10 This book analyzes how contemporary visual art can visualize environmental crisis. It draws on Karen Barad's method of "agential realism," which understands disparate factors as working together and "entangled." Through an analysis of digital eco art, the book shows how the entwining of new materialist and decolonized approaches accounts for the nonhuman factors shaping ecological crises while understanding that a purely object-driven approach misses the histories of human inequality and subjugation encoded in the environment. The resulting synthesis is what the author terms a border ecology, an approach to eco art from its margins, gaps, and liminal zones, deliberately evoking the idea of an ecotone. This book is suitable for scholarly audiences within art history, criticism and practice, but also across disciplines such as the environmental humanities, media studies, border studies and literary eco-criticism.

3D Warhol Thomas Morgan Evans, 2017-02-28 Rain machines; alarmed kosher pickle jars filled with gemstones; replica corn flakes boxes; 'disco decor'; time capsules; art bombs; birthday presents; perfume bottles and floating silver pillows that are clouds; paintings that are also films; museum interventions; collected and curated projects; expanded performance environments; holograms. This is a book about the vast array of sculptural work made by Andy Warhol between 1954 and 1987 - a period that begins long before the first Pop paintings and ends in the year of his death. In 3D Warhol, Thomas Morgan Evans argues that Warhol's engagement with sculpture, and traditional notions of sculpture, produced 'trespasses', his sculptural work bisected the expectations, allegiances and values within art historical, and ultimately social sites of investiture (or territories). This groundbreaking, original book brings to the forefront a major, but overlooked aspect of Warhol's oeuvre, providing an essential new perspective on the artist's legacy.

Pastplay Kevin Kee,2014-03-10 In the field of history, the Web and other technologies have become important tools in research and teaching of the past. Yet the use of these tools is limited—many historians and history educators have resisted adopting them because they fail to see how digital tools supplement and even improve upon conventional tools (such as books). In Pastplay, a collection of essays by leading history and humanities researchers and teachers, editor Kevin Kee works to address these concerns head-on. How should we use technology? Playfully, Kee contends. Why? Because doing so helps us think about the past in new ways; through the act of creating technologies, our understanding of the past is re-imagined and developed. From the insights of numerous scholars and teachers, Pastplay argues that we should play with technology in history because doing so enables us to see the past in new ways by helping us understand how history is created; honoring the roots of research, teaching, and technology development; requiring us to model our thoughts; and then allowing us to build our own understanding.
