Coal-Mining Safety in the Progressive Period William Graebner,2021-10-21 Through the first decade of the twentieth century, Americans looked upon industrial accidents with callous disregard; they were accepted as an unfortunate but necessary adjunct to industrial society. A series of mine disasters in December 1907 (including one in Monongah, West Virginia, which took a toll of 361 lives) shook the public, at least temporarily, out of its lethargy. In this award-winning study, author William Graebner traces the development of mine safety reform in the years immediately following these tragic events. Reform activities during the Progressive period centered on the Bureau of Mines and an effort to obtain uniform state legislation; the effect of each was minimal. Mr. Graebner concludes that these idealistic solutions of the time were at once the great hope and the great failure of the Progressive coal-mining safety movement.

DNA barcoding: a practical tool for fundamental and applied biodiversity research Zoltan T Nagy,Thierry Backeljau,Marc De Meyer,Kurt Jordaens,2013-12-30 DNA barcoding has become a well-accepted and popular tool for the identification of species and the detection of cryptic taxonomic diversity. As such, it has a tremendous potential for a wide variety of applications in taxonomy, agronomy, conservation biology, forensics etc. Therefore, several countries, institutions and organizations have launched DNA barcoding projects in the context of the international ?Consortium for the Barcode of Life? (CBOL) initiative. Also Belgium has done so with the establishment of the FWO research community ?Belgian Network for DNA barcoding?. In 2012, this network organized the ?Third European Conference for the Barcode of Life? (ECBOL3) in Brussels. During this event a call was made to publish a collection of papers under the thematic title ?DNA barcoding: a practical tool for fundamental and applied biodiversity research?. With the financial support of the EC project ?ViBRANT? (Virtual Biodiversity Research and Access Network for Taxonomy), 21 papers were bundled to form this special ?ZooKeys? issue with the aim to present various applications, advantages and limitations of DNA barcoding. Hence, it is the editors? hope that this issue provides a modest, but timely, contribution to the already vast literature on DNA barcoding.

Advances in Parapsychological Research Stanley Krippner,1977

Contemporary Newtonian Research Z. Bechler,1982 them in his cheat-preface to Copernicus De Revolutionibus, but the main change in their import has been that whereas Osiander defended Copernicus, Mach and Duhem defended science. The modern conception of hypothetico deductive science is, again, geared to defend the respectability of science in much the same way: the physical interpretation, it says, is merely and always hypothetical, and so the scientist is never really committed to it. Hence, when science sheds the physical interpretation off its mathematical skeleton as time and refutation catch up with it, the scientist is not really caught in error, for he never was committed to this interpretation in the first place. This is the apologetic essence of present day, Popper-like, versions of the idea of science as a mathematical-core-cum-interpretational shell. This is also Cohen's view, for it aims to free Newton of any existential commitment to which his theory might allegedly commit him. It will be readily seen that Cohen regards this methodological distinction between mathematics and physics to be the backbone of the Newtonian revolution in science (which is, in its tum, the climax of the whole Scientific Revolution) for a very clear reason: it enables us to argue that Newton could use freely the new concept of centripetal force, even though he did not believe in physical action at a distance and could not conceive how such a force could act to produce its effects. Special Depreciation Allowance (Us Internal Revenue Service Regulation) (Irs) (2018 Edition) The Law The Law Library,2018-11-11
Special Depreciation Allowance (US Internal Revenue Service Regulation) (IRS) (2018 Edition) The Law Library presents the complete text of the Special Depreciation Allowance (US Internal Revenue Service Regulation) (IRS) (2018 Edition). Updated as of May 29, 2018 This document contains final regulations relating to the depreciation of property subject to section 168 of the Internal Revenue Code (MACRS property) and the depreciation of computer software subject to section 167. Specifically, these final regulations provide guidance regarding the additional first year depreciation allowance provided by sections 168(k) and 1400L(b) for certain MACRS property and computer software. The regulations reflect changes to the law made by the Job Creation and Worker Assistance Act of 2002, the Jobs and Growth Tax Relief Reconciliation Act of 2003, the Working Families Tax Relief Act of 2004, the American Jobs Creation Act of 2004, and the Gulf Opportunity Zone Act of 2005. This book contains: - The complete text of the Special Depreciation Allowance (US Internal Revenue Service Regulation) (IRS) (2018 Edition) - A table of contents with the page number of each section

The Newtonian Revolution I. Bernard Cohen,1980 This volume presents Professor Cohen's original interpretation of the revolution that marked the beginnings of modern science and set Newtonian science as the model for the highest level of achievement in other branches of science. It shows that Newton developed a special kind of relation between abstract mathematical constructs and the physical systems that we observe in the world around us by means of experiment and critical observation. The heart of the radical Newtonian style is the construction on the mind of a mathematical system that has some features in common with the physical world; this system was then modified when the deductions and conclusions drawn from it are tested against the physical universe. Using this system Newton was able to make his revolutionary innovations in celestial mechanics and, ultimately, create a new physics of central forces and the law of universal gravitation. Building on his analysis of Newton's methodology, Professor Cohen explores the fine structure of revolutionary change and scientific creativity in general. This is done by developing the concept of scientific change as a series of transformations of existing ideas. It is shown that such transformation is characteristic of many aspects of the sciences and that the concept of scientific change by transformation suggests a new way of examining the very nature of scientific creativity.

Collected Mathematical Papers: Associative algebras and Riemann matrices Abraham Adrian Albert,Richard E. Block, This book contains the collected works of A. Adrian Albert, a leading algebraist of the twentieth century. Albert made many important contributions to the theory of the Brauer group and central simple algebras, Riemann matrices, nonassociative algebras and other topics. Part 1 focuses on associative algebras and Riemann matrices part 2 on nonassociative algebras and miscellany. Because much of Albert's work remains of vital interest in contemporary research, this volume will interest mathematicians in a variety of areas.

By Two and Two Jim Schutze,2023-01-10 In a solid account of what appears to be a shocking injustice an award-winning journalist uncovers the bias that led to a woman's conviction for murder (The New York Times). When a prominent Alabama doctor is brutally killed, his wife and her twin sister are charged with conspiracy to murder. But while her twin was acquitted of the crime, Betty Wilson was charged with killing her husband. Probing into a trial that deliberated on Betty's promiscuity, her alcoholism and her adulterous affair with a black man rather than any physical evidence against her, critically acclaimed journalist Jim Schutze reveals how sex, politics and corruption could possibly have led to a scandalous miscarriage of justice that kept the real killer from facing full penalty for his cold-blooded deed. A fascinating true crime account, By Two and Two is a page-turning investigation into the harrowing details of a sensational murder case.

Fourier Integrals in Classical Analysis Christopher D. Sogge,2017-04-27 This advanced monograph is concerned with modern treatments of central problems in harmonic analysis. The main theme of the book is the interplay between ideas used to study the propagation of singularities for the wave equation and their counterparts in classical analysis. In particular, the author uses microlocal analysis to study problems involving maximal functions and Riesz means using the so-called half-wave operator. To keep the treatment self-contained, the author begins with a rapid review of Fourier analysis and also develops the necessary tools from microlocal analysis. This second edition includes two new chapters. The first presents Hörmander's propagation of singularities theorem and uses this to prove the Duistermaat-Guillemin theorem. The second concerns newer results related to the Keakeya conjecture, including the maximal Keakeya estimates obtained by Bourgain and Wolff.

Search and Rescue Robotics Multiple Authors,2017-08-23 In the event of large crises (earthquakes, typhoons, floods, ...), a primordial task of the fire and rescue services is the search for human survivors on the incident site. This is a complex and dangerous task, which - too often - leads to loss of lives among the human crisis managers themselves. This book explains how unmanned search can be added to the toolkit of the search and rescue workers, offering a valuable tool to save human lives and to speed up the search and rescue process. The introduction of robotic tools in the world of search and rescue is not straightforward, due to the fact that the search and rescue context is extremely technology-unfriendly, meaning that very robust solutions, which can be deployed extremely

quickly, are required. Multiple research projects across the world are tackling this problem and in this book, a special focus is placed on showcasing the results of the European Union ICARUS project on this subject. The ICARUS project proposes to equip first responders with a comprehensive and integrated set of unmanned search and rescue tools, to increase the situational awareness of human crisis managers, so that more work can be done in a shorter amount of time. The ICARUS tools consist of assistive unmanned air, ground, and sea vehicles, equipped with victim-detection sensors. The unmanned vehicles collaborate as a coordinated team, communicating via ad hoc cognitive radio networking. To ensure optimal human-robot collaboration, these tools are seamlessly integrated into the command and control equipment of the human crisis managers and a set of training and support tools is provided to them in order to learn to use the ICARUS system. The research leading to these results has received funding from the European Community's Seventh Framework Programme (FP7/2007-2013) under grant agreement number 285417. The publishing of this book was funded by the EC FP7 Post-Grant Open Access Pilot programme.
