International Monetary Fund. Research Dept.

World Economic Outlook, October 2019 International Monetary Fund. Research Dept.,2019-10-15 Global growth is forecast at 3.0 percent for 2019, its lowest level since 2008–09 and a 0.3 percentage point downgrade from the April 2019 World Economic Outlook.

World Economic Outlook, October 2023 International Monetary Fund. Research Dept.,2023-10-10 The latest World Economic Outlook reports signs that policy tightening is starting to cool activity despite core inflation proving persistent. Risks are more balanced as banking sector stress has receded, but they remain tilted to the downside. Monetary policy should stay the course to bring inflation to target, while fiscal consolidation is needed to tackle soaring debts. Structural reforms are crucial to revive medium-term growth prospects amid constrained policy space.

World Economic Outlook, October 2015 International Monetary Fund. Research Dept.,2015-10-06 This issue discusses a number of factors affecting global growth, as well as growth prospects across the world's main countries and regions. It assesses the ongoing recovery from the global financial crisis in

advanced and emerging market economies and evaluates risks, both upside and downside, including those associated with commodity prices, currency fluctuations, and financial market volatility. A special feature examines in detail causes and implications of the recent commodity price downturn; analytical chapters look at the effects of commodity windfalls on potential output and of exchange rate movements on trade.

World Economic Outlook, April 2016 International Monetary Fund. Research Dept., 2016-04-12 Major macroeconomic realignments are affecting prospects differentially across the world's countries and regions. The April 2016 WEO examines the causes and implications of these realignments—including the slowdown and rebalancing in China, a further decline in commodity prices, a related slowdown in investment and trade, and declining capital flows to emerging market and developing economies—which are generating substantial uncertainty and affecting the outlook for the global economy. Additionally, analytical chapters examine the slowdown in capital flows to emerging market economies since their 2010 peak—its main characteristics, how it compares with past slowdowns, the factors that are driving it, and whether exchange rate flexibility has changed the dynamics of the capital inflow

cycle—and assess whether product and labor market reforms can improve the economic outlook in advanced economies, looking at the recent evolution and scope for further reform, the channels through which reforms affect economic activity under strong versus weak economic conditions, reforms’ short- to medium-term macroeconomic effects, and sequencing of reforms and coordination with other policies to maximize their potential quantitative economic benefits. A special feature analyzes in depth the energy transition in an era of low fossil fuel prices.

Regional Economic Outlook, October 2021, Western

Hemisphere: A Long and Winding Road to Recovery

INTERNATIONAL MONETARY FUND., 2021-10-21 An economic recovery is underway in Latin America and the Caribbean (LAC) but the pandemic still casts shadows on much of the region. The recovery was robust in the first quarter of 2021 but lost momentum in some countries in the second quarter, reflecting the rebound in COVID-19 cases. Real GDP is projected to grow by 6.3 percent in 2021, followed by a more moderate growth of 3 percent in 2022, but would not catch up with pre-pandemic trends in the medium

term as persistent weakness in labor markets raises risks of scarring. Broadly favorable external conditions, high commodity prices, and pent-up demand support short-term growth, while monetary and fiscal policy reversals work in the other direction. Risks to the outlook are tilted downward. Main downside risks are the emergence of more transmissible and deadlier COVID-19 variants, tightening of global financial conditions, sovereign debt rollover risks, and social unrest as a year with heavy election schedule looms. Fiscal policy should allocate sufficient resources for health spending, including vaccination, and continue to support households and firms in a more targeted fashion while the pandemic persists, backed by credible assurances of medium-term debt sustainability to maintain access to finance. Monetary policy has started to address inflationary pressures but should continue to support economic activity insofar as the dynamics of inflation expectations permit. If rising inflation threatens to de-anchor inflation expectations, central banks should tighten monetary policy to signal a commitment to inflation targets and avoid persistent increases in inflation. Preemptive and decisive action should be accompanied with clear and transparent communication. Financial policy should shift from blanket support to targeted support of

viable firms, to ensure that necessary labor and capital reallocations are not hindered. Supply-side policies should foster inclusive growth, including through progressive and growth-friendly tax reforms and measures to intensify climate change adaptation and mitigation.

World Economic Outlook, October 2021 INTERNATIONAL MONETARY FUND.,2021-10-12 The global recovery continues but the momentum has weakened, hobbled by the pandemic. Fueled by the highly transmissible Delta variant, the recorded global COVID-19 death toll has risen close to 5 million and health risks abound, holding back a full return to normalcy. Pandemic outbreaks in critical links of global supply chains have resulted in longer-than-expected supply disruptions, further feeding inflation in many countries. Overall, risks to economic prospects have increased, and policy trade-offs have become more complex.

Grenada: 2022 Article IV Consultation-Press Release; Staff Report; and Statement by the Executive Director for Grenada
International Monetary,International Monetary Fund. Western Hemisphere Dept.,2022-05-10 Grenada's economy was hit hard by the pandemic, with a decline in real output of 14 percent in 2020

from both a collapse of tourism-related activities and the suspension of in-person classes at Saint George's University (SGU). Growth in 2021 is estimated to have partly recovered to 5.6 percent, driven by construction and agriculture. The authorities' policy response helped mitigate the pandemic's impact through containment measures, increased health and social spending, and an expanded public investment program (including to build resilience to natural disasters). Central government debt rose to 70 percent of GDP in 2021 (from 59 percent in 2019) and the external position has worsened. The financial sector has so far weathered the crisis well.
