Portable Oxygen Generation for Medical Applications ,1997 A prototypical high-temperature planar oxygen generator was developed within one year. This generator utilizes yttria stabilized zirconia electrolyte and dope lanthanum manganite as the electrodes and separator plate. Several stack (1 to 3- cell) were constructed and tested. The tests demonstrated that: (1) all 25 sq cm of the active area was operational, (2) the cells possessed a low area specific resistance hat improved with time, and (3) stack power consumption decreased with time without affecting oxygen output. Important accomplishments were achieved in the areas of separator plate fabrication, metallic seal development, and stack assembly and testing.
