Mastering JXTA Joseph D. Gradecki, 2002-10-15 A comprehensive, code-intensive guide to building commercial-quality peer-to-peer applications with JXTA and Java. Tens of millions of people use peer-to-peer (P2P) applications such as KaZaA, AOL Instant Messenger, and Distributed.net. These applications harness the idle CPU cycles of their host computers to produce enormous databases of information, build powerful processing engines, and enable communication and file-sharing among users around the world. Previously, P2P applications have been built using proprietary technologies and protocols, forcing developers to start from scratch each time they write a new application. Now JXTA, an open source, P2P development technology, enables developers to build P2P applications using Java, XML, and other industry standards. With this invaluable book, Joseph Gradecki provides a practical guide to building peer-to-peer applications using Java. He provides detailed descriptions of the JXTA technologies and demonstrates how to build real-world applications. This book also includes: * Detailed descriptions of the JXTA specification and the Java reference implementation * The complete P2P development process, including how to build reusable application frameworks * Fully functional example applications, including a distributed computational engine that can utilize the idle CPU power of thousands of remote machines to solve complex problems, and a fault-tolerant, encrypted network storage system. The companion Web site includes: * All the code listings and complete applications from the book * Links to additional JXTA and P2P resources

Big Seven Study (2016): 7 open source Crypto-Messengers to be compared (English/Deutsch) David Adams, Ann-Kathrin Maier, 2019-10-23 Provided with two columns in German & English Language / Zweisprachig in deutscher & englischer Sprache. BIG SEVEN STUDY about 7 open source Crypto-Messengers for Encryption at the Desktop: A contribution in the cryptographic-discussion - The two security researchers David Adams (Tokyo) and Ann-Kathrin Maier (Munich), who examined in their BIG SEVEN study seven well-known encryption applications for e-mail and instant messaging out of the open source area, performed then a deeper IT-audit for the acquainted software solution GoldBug.sf.net. The audit took into account the essential criteria, study fields and methods on the basis of eight international IT-audit manuals and was carried out in 20 dimensions. It identifies Ten Trends in the Crypto-Messaging. Security researcher David Adams from Tokyo about the published BIG SEVEN CRYPTO-study: We looked at the seven major open source programs for encrypted online-communication and identified ten trends in the Crypto-Messaging area. One of the important trends is the feature, that the users should be able to define a so-called end-to-end encrypting password by themselves manually. The software GoldBug - email client and instant messenger here was ahead with excellent results and is not only very trustworthy and compliant to international IT-audit manuals and safety standards, GoldBug also scores in comparison and in the evaluation of the single functions in much greater detail than the other comparable open source crypto messenger. Co-author of the study Ann-Kathrin Maier from Munich confirms: We have then our Messenger study deepened with a detailed audit of the crypto-program GoldBug, which received excellent results for encrypted email and secure online chat. By our code-reviews we can confirm the trustworthiness of this open source encryption in GoldBug. Numerous details have been analyzed by various methods, compared and also strategically evaluated by the two authors regarding the current encryption discussions. The comparatively studied applications include CryptoCat, GoldBug, OTR-XMPP clients such as Pidgin with the OTR-plugin, RetroShare and Signal, Surespot and Tox.

Securing IM and P2P Applications for the Enterprise Marcus Sachs, Paul Piccard, 2005-12-12 This book is for system administrators and security professionals who need to bring now ubiquitous IM and P2P applications under their control. Many businesses are now taking advantage of the speed and efficiency offered by both IM and P2P applications, yet are completely ill-equipped to deal with the management and security ramifications. These companies are now finding out the hard way that these applications which have infiltrated their networks are now the prime targets for malicious network traffic. This book will provide specific information for IT professionals to protect themselves from these vulnerabilities at both the network and application layers by identifying and blocking this malicious traffic. * A recent study by the Yankee group ranked managing and securing IM and P2P applications as the #3 priority for IT managers in 2004 * The recently updated SANS/FBI top 10 list of vulnerabilities for computers running Microsoft Windows contained both P2P and IM applications for the first time * The recently released Symantec Threat Assessment report for the first half of 2004 showed that 19 of the top 50 virus threats targeted IM or P2P applications. Despite the prevalence of IM and P2P applications on corporate networks and the risks they pose, there are no other books covering these topics

Marketing Scheme on Peer-to-Peer (P2P) Communication Software Anticipating 4G Steffen Dubiel, 2004-11-04 Inhaltsangabe: Abstract: This diploma thesis paper is, after contemplating the current state of ITC / telco's shift towards commoditisation and challenges in facing the upcoming overall mobile / wireless development (beyond 3G, B3G, / 4G) aimed at prosperously resolving a marketing proposition on a quite ingenious Siemens mobile P2P communication solution, named Siemens Anyw@re PocketSERVent, by virtue of the marketers' generic means, the Product-marketing mix dedicated to fundamental questions of product, price, promotion, place (P4). Strategic marketing and ITC business as well as down-to-earth / operational themes will get propelled. The chief emphasis is put on surging virtualisation related to product / svce / property and, as usually less exposed, the shift towards intangible values, foremost customer relationship and momentum of the hi-tech. brand (perception). The intend is to supply a big yet detailed P2P, 3G / B3G and wireless picture to the marketer (even accountant) as well as applied marketing / pricing issues to the S/W developer or mobile techn. expert. After a brief overview (ch. 1), chapter 2 is about introducing the main points rel. peer-to-peer (P2P) it's rather social impacts, technological mindset and ongoing research, as well as contemporary benefits. The intention is to free both the subject and evaluation from hype or byzantine aspects; to present P2P's potential as well as existent contributions to corporations aware of bus. value from IT, paralleling the fashion well-known IT players dominate e.g. Web services. Chapter 3 prepares a general understanding of present-day and forthcoming ITC leitmotifs, more precisely, for why ITC, esp. 3G innovations, have been disappointing. Analysing soft product and service (svce / svc.) innovations is upon hard value; at the dawn of this decade's decentralisation / mobilisation and virtualisation following results and side effects of globalisation the tractate's author is going to constantly question whether proven and established marketing practice can answer the train of virtual i.e. through-and-through digital products, value chains, organisations or business and / or value creation communities. Nevertheless ch. 3's focal point is the wireless or mobile wireless, resp., upgrowth (convergence rel. mobile IP, P2P, B3G / 4G). At beginning of the new millennium telcos are forced to get out of the industrial age's proprietary hardware and services. Less because of customer's [...]

Java P2P Unleashed Robert Flenner, 2003 Java P2P Unleashed provides a single source for Java developers who want to develop P2P systems. The book explains the benefits of each technology and shows how to fit the P2P pieces together - both in building new systems and integrating with existing ones. Starts with a discussion of the P2P architecture, referencing similarities with existing, familiar systems while previewing several types of P2P applications. It explains how to plan ahead for security, routing, performance and other issues when developing a P2P application. Each technology included in the book - JXTA, Jini, JavaSpaces, J2EE, Web services - is approached from a P2P perspective, focusing on implementation concerns Java developers will face while using them. The last section includes several large-scale examples of different P2P applications - managing content, building communities, integrating services, routing messages, and using intelligent agents to gather information. The final chapter looks ahead to future developments in Java P2P technologies.

Information Security Practice and Experience Robert H. Deng, Feng Bao, HweeHwa Pang, Jianying Zhou, 2005-03-31 The inaugural Information Security Practice and Experience Conference (ISPEC) was held on April 11-14, 2005, in Singapore. As applications of information security technologies become pervasive, - issues pertaining to their deployment and operation are becoming increasingly important. ISPEC is intended to be an annual conference that brings together researchers and practitioners to provide a confluence of new information security technologies, their applications and their integration with IT systems in various vertical sectors. The Program Committee consisted of leading experts in the areas of information security, information systems, and domain experts in applications of IT in vertical business segments. The topics of the conference covered security applications

and case studies, access control, network security, data security, secure architectures, and cryptographic techniques. Emphasis was placed on the application of security research to meet practical user requirements, both in the paper selection process and in the invited speeches. Acceptance into the conference proceedings was very competitive. The Call for Papers attracted more than 120 submissions, out of which the Program Committee selected only 35 papers for inclusion in the proceedings. This conference was made possible only through the contributions from many individuals and organizations. We would like to thank all the authors who submitted papers. We also gratefully acknowledge the members of the Program Committee and the external reviewers, for the time and effort they put into reviewing the submissions. Special thanks are due to Ying Qiu for managing the website for paper submission, review and notification. Patricia Loh was kind enough to arrange for the conference venue, and took care of the administration in running the conference.

Information Systems Security Aditya Bagchi, 2006-12-07 This book constitutes the refereed proceedings of the Second International Conference on Information Systems Security, ICISS 2006, held in Kolkata, India in December 2006. Classification Methods for Internet Applications Martin Holeňa, Petr Pulc, Martin Kopp, 2020-01-29 This book explores internet applications in which a crucial role is played by classification, such as spam filtering, recommender systems, malware detection, intrusion detection and sentiment analysis. It explains how such classification problems can be solved using various statistical and machine learning methods, including K nearest neighbours, Bayesian classifiers, the logit method, discriminant analysis, several kinds of artificial neural networks, support vector machines, classification trees and other kinds of rule-based methods, as well as random forests and other kinds of classifier ensembles. The book covers a wide range of available classification methods and their variants, not only those that have already been used in the considered kinds of applications, but also those that have the potential to be used in them in the future. The book is a valuable resource for post-graduate students and professionals alike.

Management Science Featuring Micro-Macro Economics and Management of Information Technology W.Y. Dornyo, 2020-10-09 This

book is one of a series of various doctoral research project papers and has been further refined and converted into a book. The book has been deemed one of further versions of management science that are to come. These further versions focus more on information technology and its effects as agile tools for management, including software engineering, algorithms and data structures, computer architecture and electronics, systems science, artificial intelligence and robotics, quantum science, statistics, and web-internet and multimedia design and building. Managers are usually multifaceted with multiple disciplines even though they have one or two areas as majors, specialties, or experience. It is in the light of this that Management Science Featuring Micro-Macro Economics and Management of Information Technology was designed in this context to contain economics with IT as a course of study. In the future, further versions will be pure courses instead of combinations. The world has changed gear for the better due to the advanced mysteries of information technology innovations so that we could even conduct scientific laboratory experiments, medical diagnoses, and rule of law adjudications online. That means we could not forget information technology as one major tool in hand that should be a pivot on and around which all other areas in management should dwell and revolve, and this was one of the sole reasons of this book. It is therefore worthy of note for readers aspiring as systems analysts, managers, and professionals to accustom themselves to the subject areas in the book to instill understanding of numerous important terms and points in economics and IT. This will help to build further courage and understanding toward advancement in these fields. All topics indicated in the table of contents have been made reader friendly and treated to focus easy understanding. We highly acknowledge all the intellectual materials used.
