Asia's Energy Revolution Joseph Jacobelli,2021-06-21 Asia is home to 60 per cent of the world's population, including the world's two most populous nations, China and India. The region's economic gains and rising middle class are accelerating demand for more consumer goods and a better quality of life. For further economic growth to be realised, the region will need a massive supply of additional energy, three- to five-fold 2020's amount by 2050. These changes create new business and investment opportunities for domestic companies and overseas participants. Asia's energy market, already the world's biggest, will soon be the most advanced. There will be mass adoption of digital technologies, like artificial intelligence, to make the distribution of solar, wind and other clean resources, smarter and more efficient. Led by China, billions of dollars in capital investment will drive the region's shift to green, sustainable energy, replacing polluting and expensive fossil fuels, which will help to rein in climate change. In *Asia's Energy Revolution*, leading energy markets analyst and practitioner Joseph Jacobelli explains why Asia is the world's most important territory for energy transition, how developments in the region will drive change in the rest of the world as well as how it will all be financed. The book discussion includes: Analysis of past events and forward-looking analysis of the industry in the region encompassing commercial, economic, and financial aspects Appraisal of new energy technologies, such as electric vehicles, and digital solutions, such as blockchain for

A Socio-Legal Theory of Money for the Digital Commercial Society Israel Cedillo

Lazcano,2024-02-22 This book poses the question: do we need a new body of regulations and the constitution of new regulatory agents to face the evolution of money in the Fourth Industrial Revolution? After the Global Financial Crisis and the subsequent introduction of Distributed Ledger Technologies in monetary matters, multiple opinions claim that we are in the middle of a financial revolution that will eliminate the need for central banks and other financial institutions to form bonds of trust on our behalf. In contrast to these arguments, this book argues that we are not witnessing a revolutionary expression, but an evolutionary one that we can trace back to the very origin of money. Accordingly, the book provides academics, regulators and policy makers with a multidisciplinary analysis that includes elements such as the relevance of intellectual property rights, which are disregarded in the legal analysis of money. Furthermore, the book proposes the idea that traditional analyses on the exercise of the *lex monetae* ignore the role of inside monies and technological infrastructures developed and supported by the private sector, as exemplified in the evolution of the cryptoassets market and in cases such as *Banco de Portugal v Waterlow & Sons*. The book puts forward a proposal for the design and regulation of new payment systems and invites the reader to look beyond the dissemination of individual Distributed Ledger Technologies such as Bitcoin.
