Celiac Disease and Non-Celiac Gluten Sensitivity Luis Rodrigo, Amado Salvador Peña, 2014-11-07 Celiac disease is a systemic autoimmune process and appears in genetically predisposed individuals, with a well-known cause, consisting in a permanent intolerance to gluten, a protein contained in the flour of wheat, rye, barley and oats. Worldwide celiac disease affects to 1% of the Caucasian and there is recent evidence that the disease is increasing in USA and Finland among other regions in the world. It is considered to be the most prevalent disease with a genetic predisposition. The clinical forms of presentation are varied. The classical form consisting of diarrhea, anemia and failure to thrive is still common in children, but in the adult patients the symptoms resemble the irritable bowel syndrome. Mono-symptomatic forms with extra-intestinal manifestations are frequent. Hematological, cutaneous, articular, hepatic, bone and neurological manifestations are often described. This protean presentation and the lack of awareness explain the delay in diagnosis and suggest that screening in high-risk groups is indicated. The publication of this book written mainly by Spanish and Latin-American clinicians, researchers, and teachers, demonstrates the wide interest and the involvement of different disciplines that are necessary to understand celiac disease and gluten-related pathologies, such as non-celiac gluten-sensitivity. This has a great impact in the general public and in the industry. However, the knowledge of non-celiac gluten-related pathologies remains scarce but presently in the process of being properly defined. This book also highlights the importance of recognizing non-celiac gluten-sensitivity and briefly discusses a new definition. It also provides some perspectives to take into account when studying celiac disease in China and Central America. It describes new observations in Mexico, El Salvador and Costa Rica. The psychosocial impact as studied and reported by Argentinean investigators also adds to the value of this book. Written with a multidisciplinary team, we think that this book could be of interest to a great variety of medical specialists. Due to the systemic nature and variable presentation of celiac disease it certainly is of interest to pediatricians, gastroenterologists, hepatologists, specialists in internal medicine, general practitioners as well as hematologists, immunologists, geneticists, pathologists, rheumatologists, dermatologists, neurologists, gynecologists, neurologists, psychiatrists, psychologists, orthopedic surgeons, specialists in rehabilitation medicine, endocrinologists. Being gluten the cause of these disorders, the food industry, dietitians and nutritionists will benefit from the valuable information presented in this book.

Lowe, Ben Vinson (III.), 2012 This publication accompanies the exhibition *Revealing the African Presence in Renaissance Europe*, held at the Walters Art Museum from October 14, 2012, to January 21, 2013, and at the Princeton University Art Museum from February 16 to June 9, 2013.

Revisiting the Economic Case for Fiscal Union in the Euro Area Mr. Helge Berger, Mr. Giovanni Dell'Ariccia, Mr. Maurice Obstfeld, 2018-02-20 The paper makes an analytical contribution to the revived discussion about the euro area's institutional setup. After significant progress during the euro crisis, the drive to complete Europe's Economic and Monetary Union (EMU) had stalled, and the way forward will benefit from an in-depth look at the conceptual issues raised by the evolution and architecture of Europe, and the tradeoffs involved. A thorough look at the underlying economic issues suggests that in the long run, EMU will benefit from progressing along three mutually supporting tracks: introduce more fiscal risk sharing, helping to make the sovereign "no bailout" rule credible; complementary financial sector reforms to delink sovereigns and banks; and more effective rules to discourage moral hazard. This evolution would ensure that financial markets provide incentives for fiscal discipline. Introducing more fiscal union comes with myriad legal, technical, operational, and political problems, raising questions well beyond the remit of economics. But without decisive progress to foster fiscal risk sharing, EMU will continue to face existential risks.

Brain Disorders in Critical Illness Robert D. Stevens, Tarek Sharshar, E. Wesley Ely, 2013-09-19 Brain dysfunction is a major clinical problem in

intensive care, with potentially debilitating long-term consequences for post-ICU patients of any age. The resulting extended length of stay in the ICU and post-discharge cognitive dysfunction are now recognized as major healthcare burdens. This comprehensive clinical text provides intensivists and neurologists with a practical review of the pathophysiology of brain dysfunction and a thorough account of the diagnostic and therapeutic options available. Initial sections review the epidemiology, outcomes, relevant behavioral neurology and biological mechanisms of brain dysfunction. Subsequent sections evaluate the available diagnostic options and preventative and therapeutic interventions, with a final section on clinical encephalopathy syndromes encountered in the ICU. Each chapter is rich in illustrations, with an executive summary and a helpful glossary of terms. *Brain Disorders in Critical Illness* is a seminal reference for all physicians and neuroscientists interested in the care and outcome of severely ill patients.

Political Liberalism John Rawls, 2005-03-24 This book continues and revises the ideas of justice as fairness that John Rawls presented in *A Theory of Justice* but changes its philosophical interpretation in a fundamental way. That previous work assumed what Rawls calls a well-ordered society, one that is stable and relatively homogenous in its basic moral beliefs and in which there is broad agreement about what constitutes the good life. Yet in modern democratic society a plurality of incompatible and irreconcilable doctrines—religious, philosophical, and moral—coexist within the framework of democratic institutions. Recognizing this as a permanent condition of democracy, Rawls asks how a stable and just society of free and equal citizens can live in concord when divided by reasonable but incompatible doctrines? This edition includes the essay *The Idea of Public Reason Revisited*, which outlines Rawls' plans to revise *Political Liberalism*, which were cut short by his death. An extraordinary well-reasoned commentary on *A Theory of Justice*...a decisive turn towards political philosophy. —Times Literary Supplement

A Recovery for All Isabel Ortiz, Matthew Cummins, 2012 The world's financial and economic crisis has taken a toll on children and poor households. High food and commodity prices, unemployment and austerity measures have aggravated persistent inequalities and contributed to a substantial rise in hunger and social tensions. Now, more than ever, investments for the world's poor are needed to recover lost ground in pursuit of development objectives. People everywhere are demanding change. This book describes the social impacts of the crisis, policy responses to date and United Nations alternative proposals for 'A Recovery for All.' With a foreword by Sir Richard Jolly.

Non-destructive Micro Analysis of Cultural Heritage Materials K. Janssens, R. Van Grieken, 2004-11-26 This book provides the scientific and technical background materials of non-destructive methods of microscopic analysis that are suitable for analysing works of art, museum pieces and archaeological artefacts. Written by experts in the field, this multi-author volume contains a number of case studies, illustrating the value of these methods. The book is suited to natural scientists and analysts looking to increase their knowledge of the various methods that are currently available for non-destructive analysis. It is also the perfect resource for museum curators, archaeologists and art-historians seeking to identify one or more suitable methods of analysis that could solve material-related problems.

Immunoregulation Nicola Fabris, 2012-12-06 Immunoregulation is one of the areas which has witnessed the most explosive advances of immunology during the past decade. It is in this area that the current view of the immune system has arisen and developed. There is indeed little doubt that immune reactions are primarily determined by messages which are generated within the immune system and passed among different types of immunologic cells. This cell communication not only determines the type, intensity and duration of the response after perturbation of the immune system by exogenous antigens, but it is also essential for preventing autoimmune reactions and their clinical consequences. In order to assure a perfect balance within the enormous complexity of the immune system, it is not surprising that multiple self-regulatory mechanisms are organized at different levels, such as antibody feedback, idiotype-anti-idiotypic responses, suppressor and helper T cells, lymphokine signals and

genetic requirements. A number of observations in recent years have, however, demonstrated that consistent contributions to the immunological homeostasis are given also by signals generated outside of the immune system, namely, in the central and autonomous nervous system as well as in the endocrine apparatus. Furthermore, the interactions between the immune system and the other body homeostatic mechanisms seem to be bidirectional: if immunological cells may be targets of neuroendocrinological factors, immunological products seem in turn to contribute to the neuroendocrine homeostasis.

Global Atlas on Cardiovascular Disease Prevention and Control Shanthi Mendis, Pekka Puska, Bo Norrving, World Health Organization, 2011 As the magnitude of cardiovascular diseases (CVDs) continue to accelerate globally, the pressing need for increased awareness and for stronger and more focused international and country responses is increasingly recognized. This atlas on cardiovascular disease prevention and control is part of the response to this need. It documents the magnitude of the problem, using global cardiovascular mortality and morbidity data. It demonstrates the inequities in access to protection, exposure to risk, and access to care as the cause of major inequalities between countries and populations in the occurrence and outcome of CVDs. The report has graphs showing mortality rates of CVDs by age, by country/region, and is divided into three main sections: Section A: Cardiovascular diseases due to atherosclerosis -- Section B: Other cardiovascular diseases -- Section C: Prevention and control of CVDs: Policies, strategies and interventions.--Provided by publisher.

Science Communication in South Africa Weingart, Peter, Joubert, Marina, Facade, Bankole, 2020-01-18 Why do we need to communicate science? Is science, with its highly specialised language and its arcane methods, too distant to be understood by the public? Is it really possible for citizens to participate meaningfully in scientific research projects and debate? Should scientists be mandated to engage with the public to facilitate better understanding of science? How can they best communicate their special knowledge to be intelligible? These and a plethora of related questions are being raised by researchers and politicians alike as they have become convinced that science and society need to draw nearer to one another. Once the persuasion took hold that science should open up to the public and these questions were raised, it became clear that coming up with satisfactory answers would be a complex challenge. The inaccessibility of scientific language and methods, due to ever increasing specialisation, is at the base of its very success. Thus, translating specialised knowledge to become understandable, interesting and relevant to various publics creates particular perils. This is exacerbated by the ongoing disruption of the public discourse through the digitisation of communication platforms. For example, the availability of medical knowledge on the internet and the immense opportunities to inform oneself about health risks via social media are undermined by the manipulable nature of this technology that does not allow its users to distinguish between credible content and misinformation. In countries around the world, scientists, policy-makers and the public have high hopes for science communication: that it may elevate its populations educationally, that it may raise the level of sound decision-making for people in their daily lives, and that it may contribute to innovation and economic well-being. This collection of current reflections gives an insight into the issues that have to be addressed by research to reach these noble goals, for South Africa and by South Africans in particular.

Religion and Nationalism in Global Perspective J. Christopher Soper, Joel S. Fetzer, 2018-10-11 Offers a new framework for understanding how religion and nationalism interact across diverse countries and religious traditions.

The Good Politician Nick Clarke, Will Jennings, Jonathan Moss, Gerry Stoker, 2018-04-26 Asks how and why anti-political sentiment has grown among British citizens over the last half-century.

Governing Corporate Social Responsibility in the Apparel Industry after Rana Plaza Anil Hira, Maureen Benson-Rea, 2017-05-22 This edited collection critically explores the efforts of the apparel industry to improve safety conditions and suggests governance reforms that will resolve

lingering issues. The volume examines two consortia: the Alliance and the Accord, which set up cooperative auditing systems of supplying factories and penalties for non-compliance, and include funding to help factories comply and for workers if factories are idled during repairs, though the editors raise doubts about the long-lasting value of such efforts. In the wake of the 2013 Rana Plaza disaster, leading researchers across labor relations and industry studies tackle and debate such issues, giving their perspective of how multinationals operating in developing countries should regulate labor standards in order to resolve and improve the substandard working conditions under which much of our clothing is made.

Atherosclerosis and Autoimmunity Yehuda Shoenfeld, D. Harats, G. Wick, 2001-02-27 Presenting further studies in the prevention and treatment of coronary artery disease, this book brings together the knowledge accrued in the past decade concerning the role of immunity in the initiation and perpetuation of atherosclerosis. A strong group of international contributors summarize the diverse aspects of the interrelationship between the immune system and atherosclerosis.

Black Africans in Renaissance Europe Thomas Foster Earle, K. J. P. Lowe, 2005-05-26 This highly original book opens up the almost entirely neglected area of the black African presence in Western Europe during the Renaissance. Covering history, literature, art history and anthropology, it investigates a whole range of black African experience and representation across Renaissance Europe, from various types of slavery to black musicians and dancers, from real and symbolic Africans at court to the views of the Catholic Church, and from writers of African descent to Black African criminality. Their findings demonstrate the variety and complexity of black African life in fifteenth and sixteenth-century Europe, and how it was affected by firmly held preconceptions relating to the African continent and its inhabitants, reinforced by Renaissance ideas and conditions. Of enormous importance both for European and American history, this book mixes empirical material and theoretical approaches, and addresses such issues as stereotypes, changing black African identity, and cultural representation in art and literature.

Experiences of Freedom in Postcolonial Literatures and Cultures Annalisa Oboe, Shaul Bassi, 2011-03-30 Modern ideas of freedom and human rights have been repeatedly contested and are hotly debated at the beginning of the third millennium in response to new theories, needs, and challenges in contemporary life. This volume offers culturally diverse contributions to the debate on freedom from the literatures and arts of the postcolonial world, exploring experiences that evoke, desire, imagine, and perform freedom across five continents and two centuries of history. *Experiences of Freedom* opens with an introductory philosophical essay by Achille Mbembe and is divided into four sections that consider: • resisting history and colonialism • the right to move and to belong • the right to (believe in) free futures • imaginative freedom and critical engagement. Each section contains a piece of creative writing directly connected to these topics from authors Chris Abani, Anita Desai, Caryl Phillips, and Alexis Wright, followed by a selection of critical essays. Contributors: Chris Abani, Rochelle Almeida, Gil Anidjar, Jogamaya Bayer, Elena Bernardini, Anne Collett, Carmen Concilio, Paola Della Valle, Roberto Derobertis, Anita Desai, Lorna Down, Francesca Giommi, Gareth Griffiths, Dave Gunning, John C. Hawley, Peter H. Marsden, Russell McDougall, Achille Mbembe, Cinzia Mozzato, Kevin Newmark, Berndt Ostendorf, Mai Palmberg, Owen Percy, Kirsten Holst Petersen, Caryl Phillips, Annel Pieterse, Christiane Schlote, Nermeen Shaikh, Patrick Williams, Alexis Wright, and Robert J. C. Young.

Irony on Occasion Kevin Newmark, 2012 What is it about irony - as an object of serious philosophical reflection and a literary technique of considerable elasticity - that makes it an occasion for endless critical debate? This book responds to that question by focusing on several key moments in German romanticism and its afterlife in twentieth-century French thought and writing. Rather than provide a history of irony, it examines particular occasions of ironic disruption, thus offering an alternative model for conceiving of historical occurrences and their potential for acquiring meaning.

Political Archive of Paul de Man Martin McQuillan, 2012-08-06 Re-reads a major theorist in terms of the current crisis in sovereignty and

global capital. Taking de Man's recently published manuscript *Textual Allegories* as a point of departure, 13 experts, themselves significant voices in contemporary literary theory, revisit de Man's account of Rousseau and what he calls a 'Theotropic Allegory' (the second to last step before 'Political Allegory', on the road toward a general theory of Textual Allegory). They frame de Man's readings of Rousseau in a 'post-theoretical' landscape concerned with political theology, occupied with the transformation of the western model of sovereignty, and faced with the apparent collapse of the capitalist global contract. The volume is framed by an introduction by leading de Man scholar, Martin McQuillan, and concludes with an original and previously unpublished text by Paul de Man.

Kafka and the Universal Arthur Cools, Vivian Liska, 2016-07-25 Kafka's work has been attributed a universal significance and is often regarded as the ultimate witness of the human condition in the twentieth century. Yet his work is also considered paradigmatic for the expression of the singular that cannot be subsumed under any generalization. This paradox engenders questions not only concerning the meaning of the universal as it manifests itself in (and is transformed by) Kafka's writings but also about the expression of the singular in literary fiction as it challenges the opposition between the universal and the singular. The contributions in this volume approach these questions from a variety of perspectives. They are structured according to the following issues: ambiguity as a tool of deconstructing the pre-established philosophical meanings of the universal; the concept of the law as a major symbol for the universal meaning of Kafka's writings; the presence of animals in Kafka's texts; the modernist mode of writing as challenge of philosophical concepts of the universal; and the meaning and relevance of the universal in contemporary Kafka reception. This volume examines central aspects of the interplay between philosophy and literature.

Carbon-Ion Radiotherapy Hirohiko Tsujii, Tadashi Kamada, Toshiyuki Shirai, Koji Noda, Hiroshi Tsuji, Kumiko Karasawa, 2013-12-25 This book serves as a practical guide for the use of carbon ions in cancer radiotherapy. On the basis of clinical experience with more than 7,000 patients with various types of tumors treated over a period of nearly 20 years at the National Institute of Radiological Sciences, step-by-step procedures and technological development of this modality are highlighted. The book is divided into two sections, the first covering the underlying principles of physics and biology, and the second section is a systematic review by tumor site, concentrating on the role of therapeutic techniques and the pitfalls in treatment planning. Readers will learn of the superior outcomes obtained with carbon-ion therapy for various types of tumors in terms of local control and toxicities. It is essential to understand that the carbon-ion beam is like a two-edged sword: unless it is used properly, it can increase the risk of severe injury to critical organs. In early series of dose-escalation studies, some patients experienced serious adverse effects such as skin ulcers, pneumonitis, intestinal ulcers, and bone necrosis, for which salvage surgery or hospitalization was required. To preclude such detrimental results, the adequacy of therapeutic techniques and dose fractionations was carefully examined in each case. In this way, significant improvements in treatment results have been achieved and major toxicities are no longer observed. With that knowledge, experts in relevant fields expand upon techniques for treatment delivery at each anatomical site, covering indications and optimal treatment planning. With its practical focus, this book will benefit radiation oncologists, medical physicists, medical dosimetrists, radiation therapists, and senior nurses whose work involves radiation therapy, as well as medical oncologists and others who are interested in radiation therapy.
