Topics in Cryptology – CT-RSA 2008 Tal Malkin, 2008-04-05 The RSA Conference is the largest regularly-staged computer security event, with over 350 vendors and many thousands of attendees. The Cryptographers' Track (CT-RSA) is a research conference within the RSA Conference. CT-RSA began in 2001, and has become one of the major established venues for presenting cryptographic research papers to a wide variety of audiences. CT-RSA 2008 was held in San Francisco, California from April 8 to April 11. The proceedings of CT-RSA 2008 contain 26 papers selected from 95 submissions pertaining to all aspects of cryptography. Each submission was reviewed by at least three reviewers, which was made possible by the hard work of 27 Program Committee members and many external reviewers listed on the following pages. The papers were selected following a detailed online discussion among the Program Committee members. The program included an invited talk by Shafi Goldwasser. The current proceedings include a short abstract of her talk. I would like to express my deep gratitude to the Program Committee members, who volunteered their expertise and hard work over several months, as well as to the external reviewers.

Special thanks to Shai Halevi for providing and maintaining the Web review system used for paper submission, reviewing, and final-version preparation. Finally, I would like to thank Burt Kaliski and Ari Juels of RSA Laboratories, as well as the RSA conference team, especially Bree LaBollita, for their assistance throughout the process.

Guarding Your Business Manu Malek, Sumit Ghosh, Edward A. Stohr, 2007-05-08 *Guarding Your Business* outlines the organizational elements that must be in place to protect the information and physical assets of typical businesses and organizations. The book recognizes the need for an architecture integrated within the organizational environment for systematic protection. Such an architecture is offered along with the building blocks to make organizations resistant to human error and resilient under physical attack or natural disaster. The book addresses risk assessment, determination of quality-of-service levels that balance safety versus cost, security versus privacy, determination of access rights to data and software, and a security-conscious culture in the organization. Questions answered by experts from academia and industry include: How can one organize for security? What organizational structures, policies, and procedures must be in place? What legal and privacy issues must be addressed?
