### **Digital Negatives with QuadToneRIP** Ron

Reeder, Christina Z Anderson, 2020-10-29 Digital Negatives with QuadToneRIP is a text that fully explores how the QuadToneRIP printer driver can be used to make expert digital negatives. The book takes a comprehensive, "under-the-hood" look at how Roy Harrington's QTR printer driver can be adapted for use by artists in several different creative practice areas. The text is written from the Mac/Photoshop point of view. The book is divided into three parts. Part One is a step-by-step how-to section that will appeal to both beginning and more advanced practitioners. Part One includes quickstart guides or summary sheets for beginning students who want to jump into using QTR before understanding all of its functional components. Part Two addresses darkroom, darkroom, and printmaking practices, walking the reader through brief workflows from negative to print for lithium palladium, gum bichromate, cyanotype, salted paper, kallitype, silver gelatin and polymer photogravure, with a sample profile for each. It also includes an introduction to a new software iteration of QTR: QuickCurve-DN (QCDN). Part Three is devoted to contemporary practitioners who explain how they use QTR in their creative practice. The book includes: A list of supplies and software needed A summary QTR glossary with a simple explanation of

how each function works A sample walk-through to create a QTR profile from start to finish How to linearize profiles with simple to more exacting tools A visual guide to modifying functions Quickstart guides for many of the workflows Instructions for crafting monochrome, duotone, tricolor, and quadcolor negatives Instructions for using QTR to print silver gelatin in the darkroom Instructions for using QTR to print alternative processes in the dimroom Instructions for using QTR to print polymer photogravure in the printmaking room Introductory chapter to QuickCurve-DN software Troubleshooting common QTR problems Generic starter profiles for processes discussed Contemporary artists: their work and QTR process. Learning how to craft expert digital negatives can be a bit overwhelming at the outset. Digital Negatives with QuadToneRIP makes the process as user-friendly as possible. Like other books in the series, Digital Negatives with QuadToneRIP is thoroughly comprehensive, accessible to different levels of learner, and illustrative of the contemporary arts.

### **The Experimental Darkroom** Christina Z

Anderson, 2022-10-03 The Experimental Darkroom is a book focused on traditional black & white photographic materials—darkroom chemistry and silver gelatin paper—now used in many non-traditional ways. The book starts with a comprehensive digital negatives chapter. Topics are divided into five sections: cameraless experimentation, camera experimentation, printing experimentation, finished print experimentation, and a section highlighting contemporary photographers who use these approaches today. Each process under discussion is accompanied by photographic examples and a step-by-step method written in a “Just the facts, ma’am” style. Topics included are: Photograms and clichés verre Lumen prints Chemigrams Pinhole and zoneplate Holgas Chromo Liquid emulsion and modern tintype Lith printing Sabattier Mordancage Bleaching and bleachout Toning, traditional to experimental

Applied color and abrasion tone Encaustic, photomontage, and collage Bromoil The Experimental Darkroom encourages taking risks and having fun. Over 400 images and 71 artists are included in its 276 pages. The outcome will be an expansion of creative options for the silver gelatin print. The options are engaging and now more accessible with digital negatives. Images are no longer solely captured in camera or on analog film. The darkroom is no longer always dark. The print is no longer a pristine and accurate rendition of what the camera sees. Photographers are pushing the boundaries of black & white photographic practice. It is an exciting time to get into the darkroom and play!
