Proceedings of the Second International Workshop on Contemporary Problems in Mathematical Physics Jan Govaerts,M. Norbert Hounkonnou,Alfred Z. Msezane,2002 The following topics are discussed in this volume: recent developments in operator theory, coherent states and wavelet analysis, geometric and topological methods in theoretical physics and quantum field theory, and applications of these methods of mathematical physics to problems in atomic and molecular physics as well as the world of the elementary particles and their fundamental interactions. Two extensive sets of lecture notes on quantization techniques in general, and quantum gauge theories and strings as an avenue towards quantum geometry, are also included. The volume should be of interest to anyone working in a field using the mathematical methods associated with any of these topics.

The Use of Human Cells for the Evaluation of Risk from Physical and Chemical Agents Amleto Castellani,2013-06-29 In this volume are collected 30 papers, 9 round table discussions and 11 communications presented at the ASI Course on The use of human cells for the evaluation of risk from physical and chemical agents, sponsored by NATO and organized by ENEA. The aim of the Course was to present different scientific approaches and technical advices in order to get dose-effect relationships which are the basis for risk evaluation. The scientific background which is behind this approach was extensively discussed. Emphasis has been given to the use of human cells or human data in order to attempt to have a correct and realistic evaluation of the damage in humans. There are many criticisms on the use of animal data for human risk evaluation because of differences between species and between strains within the same species: differences in metabolism, activation processes and DNA repair ability makes uncertain the extrapolation of animal data to humans. Also data obtained using specific strains or highly inbred strains in order to reduce the variance are not applicable due to the heterogeneity of the human population connected with individual responses. In this respect only the use of human cells enable us to detect the individual variability and to identify sensitive subpopulations that would be at greater risk. My appreciation to Pieranita and Alberto Castellani for the assistance during the meeting and to Giuseppe Biondi for his help in some of the editorial work.

PC Upgrade and Repair Bible Barry Press,Marcia Press,1999-12-15 The authors provide a comprehensive reference for PC repair and upgrade, updated to include: Windows 98 and preview of Windows 2000; Pentium III and Xeon processors; ISDN, satellite, and cable modems; plug-and-play operation with Universal Serial Bus (USB) and IEEE1394 connections; and all information necessary to

Always Use Protection Dan Appleman,2008-06-27 * Appleman is a well-known, bestselling author of computing titles; has a great writing style and has valuable input/review on content from a teen focus group of technology users. * Contains the fundamentals that every teen should know: emphasizes protection of computers from viruses, and privacy issues (including identity theft), not just the usual online security that is hyped by the media. Emphasizes topics of interest to teens – for example: security on instant messaging and configuring firewalls for online gaming. * Unlike other security books written for parents, this book is written to empower teens to protect themselves and their computers. It requires no effort on the part of parents beyond buying the book and handing it to their teens. * Offers practical, well-researched much needed advice on how to protect teens and create a more secure home computing environment. (The author's survey showed over 50% of teens have had a computer virus. A recent Newsweek article describes how Oberlin college found viruses on 90% of the Windows machines of incoming freshmen).
