Counterplay Prof. Robert R.

Desjarlais, 2011-03-22 Chess gets a hold of some people, like a virus or a drug, writes Robert Desjarlais in this absorbing book. Drawing on his lifelong fascination with the game, Desjarlais guides readers into the world of twenty-first-century chess to help us understand its unique pleasures and challenges, and to advance a new anthropology of passion. Immersing us directly in chess's intricate culture, he interweaves small dramas, closely observed details, illuminating insights, colorful anecdotes, and unforgettable biographical sketches to elucidate the game and to reveal what goes on in the minds of experienced players when they face off over the board. Counterplay offers a compelling take on the intrigues of chess and shows how themes of play, beauty, competition, addiction, fanciful cognition, and intersubjective engagement shape the lives of those who take up this most captivating of games.

**Multi-stakeholder Governance and the Internet Governance Forum** Jeremy Malcolm, 2008 Multi-stakeholder governance is a fresh approach to the development of transnational public policy,

bringing together governments, the private sector and civil society in partnership. The movement towards this new governance paradigm has been strongest in areas of public policy involving global networks of stakeholders, too intricate to be represented by governments alone. Nowhere is this better illustrated than on the Internet, where it is an inherent characteristic of the network that laws, and the behaviour to which those laws are directed, will cross national borders; resulting not only in conflicts between national regimes, but also running up against the technical and social architecture of the Internet itself. In this book, Jeremy Malcolm examines the new model of multi-stakeholder governance for the Internet regime that the Internet Governance Forum (IGF) represents. He builds a compelling case for the reform of the IGF to enable it to fulfil its mandate as an institution for multi-stakeholder Internet governance.--Provided by publisher.

**On the Short Waves, 1923-1945** Jerome S.

Berg,2007-03-28 As radio developed in the early 1920s, the focus for most people was the AM band and stations such as KDKA, the first broadcast station. There was, however, another broadcast method that was popular among many early enthusiasts--shortwave radio. As is true today, the transmission of news and entertainment programs over shortwave frequencies permitted reception over great distances. For many in America and beyond, shortwave was an exciting

aspect of the new medium. Some still tune the shortwave bands to enjoy the programming. Others pursue broadcasts for the thrill of the hunt. This book fully covers shortwave broadcasting from its beginning through World War II. A technical history examining the medium's development and use tells the story of a listener community that spanned the globe. Included are overviews of the primary shortwave stations operating worldwide in the 1930s, along with clubs and competitions, publications and prizes. A rich collection of illustrations includes many QSLs, the cards that stations sent to acknowledge receipt of their transmissions and that are much prized by long-distance collectors.

*Highlights of ... Tax Changes* ,1996

The CIO's Left-led Unions Steven Rosswurm,1992  
The American labor movement seemed poised on the threshold of unparalleled success at the beginning of the post-World War II era. Fourteen million strong in 1946, unions represented 35 percent of non-agricultural workers, and federal power insured collective bargaining rights. The contrast with the pre-war years was strongest for those workers who retained vivid memories of the 1920s and early 1930s. Then, the labor movement lacked government legitimacy, and, at the worst point of the Great Depression, the union movement barely enrolled 5 percent of the non-farm workforce; one out of every four workers lacked a job. Now, the future seemed to hold unlimited possibilities.

*Probit Analysis* David Finney,2009-07-16

Originally published in 1947, this classic study by D. J. Finney was the first to examine and explain a branch of statistical method widely used in connection with the biological assay of insecticides, fungicides, drugs, vitamins, etc. It standardized the computations and terminology and made its use easier for a biologist without statistical expertise, whilst also outlining the underlying mathematical theory. Finney had made several important contributions to the method in the past, and his own results are also included. The book contains a foreword by the influential insecticidal chemist Dr F. Tattersfield.

The Early Shortwave Stations Jerome S. Berg, 2013-09-20 In July 1923, less than three years after Westinghouse station KDKA signed on, company engineer Frank Conrad began regular simulcasting of its programs on a frequency in the newly-discovered shortwave range. It was an important event in a technological revolution that would make dependable worldwide radio communication possible for the first time. In subsequent years, countless stations in practically all countries followed suit, taking to shortwave to extend reception domestically or reach audiences thousands of miles away. Shortwave broadcasting would also have an important role in World War II and in the Cold War. In this, his fourth book on shortwave broadcast history, the author revisits the period of his earlier work, *On the Short Waves, 1923-1945*, and focuses on the stations that were on the air in those early days. The year-by-year account chronicles the birth and operation of the large international broadcasters, as well as the numerous smaller stations that were a great attraction to the DXers, or long-distance radio enthusiasts, of the time. With more than 100 illustrations and extensive notes, bibliography and index, the book is also a valuable starting point for further study and research.

Dynamic Social Network Modeling and Analysis  
National Research Council, Division of Behavioral and Social Sciences and Education, Board on

Behavioral, Cognitive, and Sensory Sciences, Committee on Human Factors, 2003-08-01 In the summer of 2002, the Office of Naval Research asked the Committee on Human Factors to hold a workshop on dynamic social network and analysis. The primary purpose of the workshop was to bring together scientists who represent a diversity of views and approaches to share their insights, commentary, and critiques on the developing body of social network analysis research and application. The secondary purpose was to provide sound models and applications for current problems of national importance, with a particular focus on national security. This workshop is one of several activities undertaken by the National Research Council that bears on the contributions of various scientific disciplines to understanding and defending against terrorism. The presentations were grouped in four sessions – Social Network Theory Perspectives, Dynamic Social Networks, Metrics and Models, and Networked Worlds – each of which concluded with a discussant-led roundtable discussion among the presenters and workshop attendees on the themes and issues raised in the session.
