Nutrition Optimization for Health and Longevity Herbert Zeng,2010-03 Do you want to live longer with optimum health? Do you want to know how to achieve longevity through nutrition optimization? In *Nutrition Optimization for Health and Longevity*, Dr. Herbert Zeng teaches you how to optimize what you breathe, drink, and eat to meet your body's needs. In particular, it instructs you how to optimize the nutrition of the foods you eat to satisfy your daily energy and nutrition requirements using a step-by-step procedure. From the optimization point of view, you can eat any kinds of food, but they must be in the right amounts, with the right combinations, in the right time (age) in order to satisfy your daily energy and nutrition requirements. Feldman and Pike's Vitamin D Martin Hewison,Roger Bouillon,Edward Giovannucci,David Goltzman,Mark Meyer B.,JoEllen Welsh,2023-10-28 Vitamin D deficiency is a worldwide problem linked to numerous diseases affecting men, women, and children of all ages. Enormous progress in the study of vitamin D has been made since the first edition of this highly-acclaimed book was published nearly 20 years ago, and current research continues to draw headlines. Feldman and Pike's Vitamin D, Fifth Edition continues to build on the successful formula from previous editions, taking the reader from the basic elements of fundamental research to the most sophisticated concepts in therapeutics. The two comprehensive volumes provide investigators, clinicians, and students with a comprehensive, definitive, and up-to-date compendium of the diverse scientific and clinical aspects of vitamin D, where each area is covered by both basic and clinical experts in the field. In Volume I: Biochemistry, Physiology and Diagnostics, international experts in endocrinology, bone biology, and human physiology take readers through the basic research of vitamin D. This impressive reference presents a comprehensive review of the multi-faceted actions of vitamin D relating both to skeletal and extra-skeletal action. Researchers from all areas of vitamin D will gain insight into how clinical observations and practices can feed back into the research cycle and will, therefore, be able to develop more targeted genomic and proteomic insights into the mechanisms of disease. Volume II: Health, Disease and Therapy authoritatively covers the evidence for new roles of vitamin D, ranging from organ transplantation to cancer, diabetes, inflammatory bowel disease, multiple sclerosis, and renal disease. The coverage is appropriately broad, drawing on aspects of internal medicine, pediatrics, nutrition, orthopedics, oncology, neurology, obstetrics and gynecology, and immunology, as well as, new areas for vitamin D including sports medicine, ophthalmology, veterinary medicine and ICU care – including COVID-19. Clinical researchers will gain a strong understanding of the molecular basis for a particular disease and better understand future directions for research in this still-growing field. A comprehensive reference ranging from basic biochemistry, cell biology, and physiology principles to the clinical diagnostic and management implications of vitamin D Saves researchers and clinicians time in quickly accessing the very latest details on the diverse scientific and clinical aspects of vitamin D, as opposed to searching through thousands of journal articles Chapters written by the most prominent and well-published names in the field

Biocatalytic Process Optimization Chia-Hung Kuo,Chwen-Jen Shieh,2021-01-14 Biocatalysis is very appealing to the industry because it allows, in principle, the synthesis of products not accessible by chemical synthesis. Enzymes are very effective, as are precise biocatalysts, as they are enantioselective, with mild reaction conditions and green chemistry. Biocatalysis is currently widely used in the pharmaceutical industry, food industry, cosmetic industry, and textile industry. This includes enzyme production, biocatalytic process development, biotransformation, enzyme engineering, immobilization, the synthesis of fine chemicals and the recycling of biocatalysts. One of the most challenging problems in biocatalysis applications is process optimization. This Special Issue shows that an optimized biocatalysis process can provide an environmentally friendly, clean, highly efficient, low cost, and renewable process for the synthesis and production of valuable products. With further development and improvements, more biocatalysis processes may be applied in the future.
