PC Magazine Fighting Spyware, Viruses, and Malware Ed Tittel,2004-12-31 Think there's no malicious software on your computer? PC Magazine thinks you should think again. Scans by ISPs have revealed as many as twenty-eight spyware programs running on the average home computer--like yours. That's a lot of people prying into what's on your PC, and a DSL or cable connection is a virtual welcome mat. But by following Ed Tittel's advice, you can learn how invasions occur, spot an infestation, repair damage that's already done, and slam the door on those who want to hijack your PC--along with your wallet. Here's how you can * Learn to recognize when a Trojan horse, a virus, adware, or spyware has invaded your PC * Get the tools that can cure an infection * Dig into the Windows Registry to remove the nastiest of bugs * Prevent a recurrence with personal firewalls and protective software * Deal with the onslaught of spam * Keep your defenses up-to-date Give it the boot If you believe you've caught something and you're willing to kiss everything goodbye that you've added to or changed ... since the last time you booted up your computer ... try this. While Windows is first booting up, hit the F8 key .... Choose the Last Known Good Configuration option, and Windows should boot running the version of the Registry that existed the last time your system booted--that is, before you got infected. -- From Chapter 4

Intercept Gordon Corera,2015 INTERCEPT is the previously untold - and previously highly classified - story of the melding of technology and espionage. Gordon Corera's compelling narrative, rich with historical details and characters, takes us from the Second World War to the internet age, with astonishing revelations about espionage carried out today. The computer was born to spy. Under the intense pressure of the Second World War and in the confines of Britain's code-breaking establishment at Bletchley Park, the work of Alan Turing and others led to the birth of electronic espionage. It was a breakthrough that helped win the war. In the following decades, computers transformed espionage from the spy hunting of the Cold War years to the data-driven pursuit of terrorists and the industrial-scale cyber-espionage against corporations in the twenty-first century. Together, computers and spies are shaping the future, and from the rise of China to the phones in our pockets, what was once the preserve of a few intelligence agencies now matters for us all. Drawing on unique access to Western intelligence agencies, on the ground reporting from China and insights into the most powerful technology companies, Corera has gathered compelling stories from heads of state, hackers and spies of all stripes. INTERCEPT is a ground-breaking exploration of the new space in which the worlds of espionage, geopolitics, diplomacy, international business, science and technology collide.
