The Enzymes of Biological Membranes Anthony Martonosi,2012-12-06 In the first edition of The Enzymes of Biological Membranes, published in four volumes in 1976, we collected the mass of widely scattered information on membrane-linked enzymes and metabolic processes up to about 1975. This was a period of transition from the romantic phase of membrane biochemistry, preoccupied with conceptual developments and the general properties of membranes, to an era of mounting interest in the specific properties of membrane-linked enzymes analyzed from the viewpoints of modern enzymology. The level of sophistication in various areas of membrane research varied widely; the structures of cytochrome c and cytochrome b were known to atomic detail, while the majority of membrane-linked enzymes had not even been isolated. In the intervening eight years our knowledge of membrane-linked enzymes expanded beyond the wildest expectations. The purpose of the second edition of The Enzymes of Biological Membranes is to record these developments. The first volume describes the physical and chemical techniques used in the analysis of the structure and dynamics of biological membranes. In the second volume the enzymes and metabolic systems that participate in the biosynthesis of cell and membrane components are discussed. The third and fourth volumes review recent developments in active transport, oxidative phosphorylation and photosynthesis.

Phosphoinositides and Disease Marco Falasca,2012-10-20 Phosphoinositides (PIs) are minor components of cellular membranes that play critical regulatory roles in several intracellular functions. This book describes the main enzymes regulating the turnover of each of the seven PIs in mammalian cells, some of their intracellular functions and some evidence of their involvement in human diseases. Due to the complex inter-relation between the distinct PIs and the plethora of functions that they can regulate inside a cell, this book is not meant to be a comprehensive coverage of all aspects of PIs signalling but rather an overview on the current state of the field and where it could go from here. Phosphoinositide and inositol phosphates interact with and modulate the recruitment and activation of key regulatory proteins and in doing so control diverse functions including cell growth and proliferation, apoptosis, cytoskeletal dynamics, insulin action, vesicle trafficking and nuclear function. Initially, inositide signaling was limited to the PLC pathway; however, it is now clear that all the seven phosphoinositides and more than 30 different inositol phosphates likely have specific signaling functions. Moreover there is a growing list of proteins that are regulated by inositol signaling. This has raised the question as to how inositol signaling can control diverse processes and yet maintain signaling specificity. Controlling the levels of inositol signaling molecules and their subcellular compartmentalisation is likely to be critical. This meeting will bring together scientists from different backgrounds to discuss how understanding inositol signaling may be used to target complex human diseases that manifest themselves when inositol signaling is deregulated.

Lipid Binding Proteins within Molecular and Cellular Biochemistry D.A. Bernlohr,L. Banaszak,2012-12-06 The breadth of modern biology is characterized by a comprehension of phenomena at many levels of organization. Such levels of understanding range from the organismal to the molecular. It is when all these levels can be discussed together that a sense of true achievement begins to be felt. The topical area of fatty acid transport and metabolism was the focus of the Third International Conference on Lipid-Binding Proteins held at the University of Minnesota in May 1997. This volume contains a sampling of the proceedings of this meeting.

Feedback-Based Orthogonal Digital Filters Mukund Padmanabhan,Kenneth W. Martin,Gábor Péceli,2012-12-06 Feedback-Based Orthogonal Digital Filters: Theory, Applications, and Implementation develops the theory of a feedback-based orthogonal digital filter and examines several applications where the filter topology leads to a simple and efficient solution. The development of the filter structure is linked to concepts in observer theory. Several signal processing problems can be represented as estimation problems, where a parametric representation of the input is used, to try and replicate it locally. This estimation problem can be solved using an identity observer, and the filter topology falls in this framework. Hence the filter topology represents a universal building block that can find application in several problems, such as spectral estimation, time-recursive computation of transforms, etc. Further, because of the orthogonality constraints satisfied by the structure, it also represents a robust solution under finite precision conditions. The book also presents the observer-based viewpoint of several signal processing problems, and shows that problems that are typically treated independently in the literature are in fact linked and can be cast in a single unified framework. In addition to examining the theoretical issues, the book describes practical issues related to a hardware implementation of the building block, in both the digital and analog domain. On the digital side, issues relating to implementation using semi-custom chips (FPGA's), and ASIC design are examined. On the analog side, the design and testing of a fabricated chip, that functions as a multi-sinusoidal phase-locked-loop, are described. Feedback-Based Orthogonal Digital Filters serves as an excellent reference. May be used as a text for advanced courses on the subject.

Human Apolipoprotein Mutants III Cesare R. Sirtori,Guido Franceschini,Bryan H.Jr. Brewer,2013-06-29 Hopes to develop apolipoproteins for diagnostic or, even better, therapeutic purposes are growing. Areas of use may range from arterial disease to AIDS, fertilization programs, neurological or inflammatory disorders, and the like. However, these young members of the large family of circulating proteins still deserve careful study, both in terms of structural and functional properties and of their pathological changes. In addition, related molecules, in particular belonging to the family of enzymes, such as lipases and acyltransferases, offer exciting insight into the mechanisms of regulation of lipid transport and exchange. Described here is the use of apolipoproteins and enzymes in the diagnosis of coronary and cerebrovascular disease. Structural and functional changes of apolipoproteins are related to lipid transport and binding to different receptors. Further, the development of apolipoprotein drugs and their possible clinical use for vascular and non vascular disease is discussed and finally an overview on lipoprotein transformation processes, expression systems and natural mutants is provided.

Degenerative Retinal Diseases Matthew M. LaVail,Joe G. Hollyfield,Robert E. Anderson,2012-12-06 Since 1984, we have organized Satellite Symposia on Retinal Degenerations that are held in conjunction with the biennial International Congress of Eye Research. The timing and location of our Retinal Degeneration Symposia have all owed scientists and clinicians from around the world to convene and present their exciting new findings. The symposia have been arranged to allow ample time for discussions and one-on-one interactions in a relaxed atmosphere, where international friendships and collaborations could be established. The II International Symposium (also known as the Sendai Symposium on Retinal Degeneration) was held in 1986 in Sendai, Japan, on the occasion of the retirement of Kat suyoshi Mizuno as Professor and Chairman of Ophthalmology at Tohoku Medical School. On October 5-9, 1996, we returned to Sendai, where the VII International Symposium was held at the Miyagi Zao resort hotel in the beautiful Mt. Zao region of northern Japan. This meeting was held on the occasion of the tenth anniversary of Makoto Tarnai as Professor and Chairman of Ophthalmology at Tohoku Medical School. One afternoon of the meeting contained a special symposium in honor of Professor Tarnai, who has significantly elevated the level and intensity of research on retinal degenerations at his university and in Japan during this past decade.

Biochemistry of Lipids, Lipoproteins and Membranes Dennis E. Vance, J.E. Vance, 2002-12-06 The first edition of this book was published in 1985. The content of the 4th edition reflects the enormous advances that have occurred since that time in the field of lipid biochemistry. This publication is unique in that it represents a bridge between the superficial coverage of the lipid field found in basic biochemistry text books and the highly specialized material contained in scientific review articles and monographs. The book is not a collection of exhaustive reviews, but a current and readable summary of diverse aspects of lipids. It is intended as an advanced and up-to-date textbook for teachers and students who are familiar with the basic concepts of lipid biochemistry and will also serve as a general reference book for scientists studying lipids, lipoproteins and membranes.

Protein-Lipid Interactions Anthony Watts, 1993-10-08 Protein-lipid interactions as a field of study is now a mature area, and this volume of New Comprehensive Biochemistry has been published with two objectives in mind. Firstly, to look to the future, and try to envisage how the subject may develop in the near to medium future. Secondly, to present contrasting or complementary views on the same system. For example, the acetylcholine receptor is discussed from a predominantly structural aspect by Barrantes, and from the kinetic standpoint by Rankin, et al. The volume not only gives an update on specific aspects of the field, but also shows the way in which the phenomenon of protein-lipid interactions is now seemingly infiltrating many areas of biomembrane research, from recombinant DNA studies, protein insertion and assembly and reconstitution considerations to structural studies of membrane proteins.

Phospholipid Transfer Proteins Vytas A. Bankaitis, 1996-04 The subject of this book is an enigmatic class of proteins, the phospholipid transfer proteins. This volume provides not only a general reference for researchers and clinicians who desire to acquaint themselves with the biochemistry and cell biology of these fascinating proteins, but also gives an up-to-date account of the exciting developments regarding our understanding of phosphatidylinositol/phosphatidylcholine transfer protein function in cells.
