The Computer Engineering Handbook Vojin G. Oklobdzija,2001-12-26 There is arguably no field in greater need of a comprehensive handbook than computer engineering. The unparalleled rate of technological advancement, the explosion of computer applications, and the now-in-progress migration to a wireless world have made it difficult for engineers to keep up with all the developments in specialties outside their own. References published only a few years ago are now sorely out of date. The Computer Engineering Handbook changes all of that. Under the leadership of Vojin Oklobdzija and a stellar editorial board, some of the industry's foremost experts have joined forces to create what promises to be the definitive resource for computer design and engineering. Instead of focusing on basic, introductory material, it forms a comprehensive, state-of-the-art review of the field's most recent achievements, outstanding issues, and future directions. The world of computer engineering is vast and evolving so rapidly that what is cutting-edge today may be obsolete in a few months. While exploring the new developments, trends, and future directions of the field, The Computer Engineering Handbook captures what is fundamental and of lasting value.

Coding and Signal Processing for Magnetic Recording Systems Bane Vasic,Erozan M. Kurtas,2004-11-09 Rapid advances in recording materials, read/write heads, and mechanical designs over the last 15 years have led to the need for more complicated signal processing, coding, and modulation algorithms for the hard disk drive read channel. Today, the challenges in implementing new architectures and designs for the read channel have been pushed to the

Advanced Error Control Techniques for Data Storage Systems Erozan M. Kurtas,Bane Vasic,2018-10-03 With the massive amount of data produced and stored each year, reliable storage and retrieval of information is more crucial than ever. Robust coding and decoding techniques are critical for correcting errors and maintaining data integrity. Comprising chapters thoughtfully selected from the highly popular Coding and Signal Processing for Magnetic Recording Systems, Advanced Error Control Techniques for Data Storage Systems is a finely focused reference to the state-of-the-art error control and modulation techniques used in storage devices. The book begins with an introduction to error control codes, explaining the theory and basic concepts underlying the codes. Building on these concepts, the discussion turns to modulation codes, paying special attention to run-length limited sequences, followed by maximum transition run (MTR) and spectrum shaping codes. It examines the relationship between constrained codes and error control and correction systems from both code-design and architectural perspectives as well as techniques based on convolution codes. With a focus on increasing data density, the book also explores multi-track systems, soft decision decoding, and iteratively decodable codes such as Low-Density Parity-Check (LDPC) Codes, Turbo codes, and Turbo Product Codes. Advanced Error Control Techniques for Data Storage Systems offers a comprehensive collection of theory and techniques that is ideal for specialists working in the field of data storage systems.

Modeling and Simulation in Python Allen B. Downey,2023-05-30 Modeling and Simulation in Python teaches readers how to analyze real-world scenarios using the Python programming language, requiring no more than a background in high school math. Modeling and Simulation in Python is a thorough but easy-to-follow introduction to physical modeling—that is, the art of describing and simulating real-world systems. Readers are guided through modeling things like world population growth, infectious disease, bungee jumping, baseball flight trajectories, celestial mechanics, and more while simultaneously developing a strong understanding of fundamental programming concepts like loops, vectors, and functions. Clear and concise, with a focus on learning by doing, the author spares the reader abstract, theoretical complexities and gets right to hands-on examples that show how to produce useful models and simulations.

Magnetic Storage Systems Beyond 2000 G.C. Hadjipanayis,2012-12-06 An up-to-date and comprehensive review of magnetic storage systems, including particulate and rigid media, magnetic heads, tribology, signal processing spintronics, and other, future systems. A thorough theoretical discussion supplements the experimental and technical aspects. Each section commences with a tutorial paper, which is followed by technical discussions of current research in the area. Written at a level suitable for advanced graduate students.

Phylogenomic Discordance in Plant Systematics Stefan Wanke,Susann Wicke,2023-11-15 Phylogenetics often uncovers contradicting hypotheses regarding the relationships within the same group of organisms, a phenomenon known since the beginning of the molecular systematics era. While, historically, single marker-based analyses produced discordance, nowadays entire cellular genomes or portions of the same genomic compartment conflict with others or the rest, respectively. In contrast to the beginning of the molecular systematics era, when adding markers and taxa offered a way out of systematic errors, genome inference-based incongruences cannot be addressed and explained easily. Disagreeing phylogenomic hypotheses might originate from various evolutionary processes, including but not limited to hybridization or incomplete lineage sorting, thereby leading to gene tree-versus species tree-associated discrepancies. Today, this can be expanded to genome discordance, where phylogenomic signals of organellar genomes (plastid, mitochondrial) and the nuclear genome disagree due to intrinsically different coalescent paths or phenomena like organelle capture.

The Oxford History of Poetry in English Julia Boffey,A. S. G. Edwards,2023-04-12 The Oxford History of Poetry in English is designed to offer a fresh, multi-voiced, and comprehensive analysis of 'poetry': from Anglo-Saxon culture through contemporary British, Irish, American, and Global culture, including English, Scottish, and Welsh poetry, Anglo-American colonial and post-colonial poetry, and poetry in Canada, Australia, New Zealand, the Caribbean, India, Africa, Asia, and other international locales. The series both synthesizes existing scholarship and presents cutting-edge research, employing a global team of expert contributors for each of the fourteen volumes. This volume explores the developing range of English verse in the century after the death of Chaucer in 1400, years that saw both change and consolidation in traditions of poetic writing in English in the regions of Britain. Chaucer himself was an important shaping presence in the poetry of this period, providing a stimulus to imitation and to creative expansion of the modes he had favoured. In addition to assessing his role, this volume considers a range of literary factors significant to the poetry of the century, including verse forms, literary language, translation, and the idea of the author. It also signals features of the century's history that were important for the production of English verse: responses to wars at home and abroad, dynastic uncertainty, and movements

towards religious reform, as well as technological innovations such as the introduction of printing, which brought influential changes to the transmission and reception of verse writing. The volume is shaped to include chapters on the contexts and forms of poetry in English, on the important genres of verse produced in the period, on some of the fifteenth-century's major writers (Lydgate, Hoccleve, Dunbar, and Henryson), and a consideration of the influence of the verse of this century on what was to follow.

Intelligent Computing Methodologies De-Shuang Huang,Zhi-Kai Huang,Abir Hussain,2019-07-30 This two-volume set of LNCS 11643 and LNCS 11644 constitutes - in conjunction with the volume LNAI 11645 - the refereed proceedings of the 15th International Conference on Intelligent Computing, ICIC 2019, held in Nanchang, China, in August 2019. The 217 full papers of the three proceedings volumes were carefully reviewed and selected from 609 submissions. The ICIC theme unifies the picture of contemporary intelligent computing techniques as an integral concept that highlights the trends in advanced computational intelligence and bridges theoretical research with applications. The theme for this conference is “Advanced Intelligent Computing Methodologies and Applications.” Papers related to this theme are especially solicited, including theories, methodologies, and applications in science and technology.

Three Purgatory Poems Edward E Foster,2004-07-01 Though our modern understanding of the medieval doctrine of Purgatory is generally shaped by its presentation by Dante in the Divine Comedy, there is a lengthy history of speculation about the nature of such a place of purgation. Through these fourteenth-century Middle English poems, readers can experience something of the controversies that surfaced and resurfaced even after Aquinas had articulated his doctrine of the Communion of Saints. The Gast of Gy, as Foster notes, puts a human face on the doctrine of Purgatory, not only in the amiable, logical, and patient person of the Gast of Gy himself, . . . but also in the careful and cautious dialogue between the Gast and the Pryor who questions him. Sir Owain and The Vision of Tundale present two accounts of the purgatorial journeys of living individuals who are offered a chance to see the torments they have brought upon themselves by their less-than-perfect lives along with the opportunity to return and amend those lives. All three poems were quite popular, as was the doctrine of Purgatory itself. And why not? As Foster notes in his general introduction, it the doctrine of Purgatory had everything: adventure and adversity, suffering and excitement, and, most importantly, a profound theological warning wrapped in the joyful solace of communion with the departed and hope for our own sinful selves.

Pattern Recognition and Computer Vision Huimin Ma,Liang Wang,Changshui Zhang,Fei Wu,Tieniu Tan,Yaonan Wang,Jianhuang Lai,Yao Zhao,2021-10-22 The 4-volume set LNCS 13019, 13020, 13021 and 13022 constitutes the refereed proceedings of the 4th Chinese Conference on Pattern Recognition and Computer Vision, PRCV 2021, held in Beijing, China, in October-November 2021. The 201 full papers presented were carefully reviewed and selected from 513 submissions. The papers have been organized in the following topical sections: Object Detection, Tracking and Recognition; Computer Vision, Theories and Applications, Multimedia Processing and Analysis; Low-level Vision and Image Processing; Biomedical Image Processing and Analysis; Machine Learning, Neural Network and Deep Learning, and New Advances in Visual Perception and Understanding.

Semiotics Roland Posner,Klaus Robering,Thomas Albert Sebeok,2004 This series of HANDBOOKS OF LINGUISTICS AND COMMUNICATION SCIENCE is designed to illuminate a field which not only includes general linguistics and the study of linguistics as applied to specific languages, but also covers those more recent areas which have developed from the increasing body of research into the manifold forms of communicative action and interaction. For classic linguistics there appears to be a need for a review of the state of the art which will provide a reference base for the rapid advances in research undertaken from a variety of theoretical standpoints, while in the more recent branches of communication science the handbooks will give researchers both an verview and orientation. To attain these objectives, the series will aim for a standard comparable to that of the leading handbooks in other disciplines, and to this end will strive for comprehensiveness, theoretical explicitness, reliable documentation of data and findings, and up-to-date methodology. The editors, both of the series and of the individual volumes, and the individual contributors, are committed to this aim. The languages of publication are English, German, and French. The main aim of the series is to provide an appropriate account of the state of the art in the various areas of linguistics and communication science covered by each of the various handbooks; however no inflexible pre-set limits will be imposed on the scope of each volume. The series is open-ended, and can thus take account of further developments in the field. This conception, coupled with the necessity of allowing adequate time for each volume to be prepared with the necessary care, means that there is no set time-table for the publication of the whole series. Each volume will be a self-contained work, complete in itself. The order in which the handbooks are published does not imply any rank ordering, but is determined by the way in which the series is organized; the editor of the whole series enlist a competent editor for each individual volume. Once the principal editor for a volume has been found, he or she then has a completely free hand in the choice of co-editors and contributors. The editors plan each volume independently of the others, being governed only by general formal principles. The series editor only intervene where questions of delineation between individual volumes are concerned. It is felt that this (modus operandi) is best suited to achieving the objectives of the series, namely to give a competent account of the present state of knowledge and of the perception of the problems in the area covered by each volume.
