Getting Started in 3D with 3ds Max Ted Boardman,2012-09-10 Learning a 3D

visualization software is a daunting task under any circumstances and while it may be easy to find online tutorials that tell you what to do to perform certain tasks you'll seldom learn why you are performing the steps. This book approaches training from a top-down perspective way you will first learn important concepts of 3D visualization and functionality of 3ds Max before moving into the finer detail of the command structure. By learning how things work and why you might choose one method over another the book will not only teach you where the buttons are, but more importantly how to think about the holistic process of 3D design so that you can then apply the lessons to your own needs. The goal of the learning presented here is to familiarize the new user of 3ds Max with a typical workflow from a production environment from planning to modeling, materials, and lighting, and then applying special effects and compositing techniques for a finished product.

Formal Methods for Open Object-Based Distributed Systems Paolo

Ciancarini, Alessandro Fantechi, Roberto Gorrieri, 2013-11-11 Formal Methods for Open Object-Based Distributed Systems presents the leading edge in several related fields, specifically object-orientated programming, open distributed systems and formal methods for object-oriented systems. With increased support within industry regarding these areas, this book captures the most up-to-date information on the subject. Many topics are discussed, including

the following important areas: object-oriented design and programming; formal specification of distributed systems; open distributed platforms; types, interfaces and behaviour; formalisation of object-oriented methods. This volume comprises the proceedings of the International Workshop on Formal Methods for Open Object-based Distributed Systems (FM00DS), sponsored by the International Federation for Information Processing (IFIP) which was held in Florence, Italy, in February 1999. Formal Methods for Open Object-Based Distributed Systems is suitable as a secondary text for graduate-level courses in computer science and telecommunications, and as a reference for researchers and practitioners in industry, commerce and government.

Object-Oriented Software: Design and Maintenance Luiz Fernando Capretz, Miriam A M Capretz, 1996-09-09 This is a textbook for a course in object-oriented software engineering at advanced undergraduate and graduate levels, as well as for software engineers. It contains more than 120 exercises of diverse complexity. The book discusses fundamental concepts and terminology on object-oriented software development, assuming little background on software engineering, and emphasizes design and maintenance rather than programming. It also presents up-to-date and easily understood methodologies and puts forward a software life cycle model which explicitly encourages reusability during software development and maintenance.

Uncovering Ancient Editing Ville Mäkipelto, 2018-10-08 The Hebrew Bible is a product of ancient editing, but to what degree can this editing be uncovered?

“Uncovering Ancient Editing” argues that divergent textual witnesses of the same text, so-called documented evidence, should be the starting point for such an endeavor. The book presents a fresh analysis of Josh 24 and related texts as a test case for refining our knowledge of how scribes edited texts. Josh 24 is envisioned as a gradually growing Persian period text, whose editorial history can be reconstructed with the help of documented evidence preserved in the MT, LXX, and other ancient sources. This study has major implications for both the study of the book of Joshua and text-historical methodology in general.

Formal Methods for Open Object-Based Distributed Systems Elie Najm, Uwe Nestmann, Perdita Stevens, 2003-11-24 This volume contains the proceedings of FMOODS 2003, the 6th IFIP WG 6.1 International Conference on Formal Methods for Open Object-Based Distributed Systems. The conference was held in Paris, France on November 19–21, 2003. The event was the sixth meeting of this conference series, which is held roughly every year and a half, the earlier events having been held in Paris, Canterbury, Florence, Stanford, and Twente. The goal of the FMOODS series of conferences is to bring together researchers whose work encompasses three important and related fields: – formal methods; – distributed systems; – object-based technology. Such a convergence is representative of recent advances in the field of distributed systems, and provides links between several scientific and technological communities, as represented by the conferences FORTE/PSTV, CONCUR, and ECOOP. The

objective of FMOODS is to provide an integrated forum for the presentation of research in the above-mentioned fields, and the exchange of ideas and experiences in the topics concerned with the formal methods support for open object-based distributed systems. For the call for papers, aspects of interest of the considered systems included, but were not limited to: formal models; formal techniques for specification, design or analysis; component-based design; verification, testing and validation; semantics of programming, coordination, or modeling languages; type systems for programming, coordination or modelling languages; behavioral typing; multiple viewpoint modelling and consistency - tween different models; transformations of models; integration of quality of service requirements into formal models; formal models for security; and applications and experience, carefully described.
