### Development of Component-based Information Systems

Sergio De Cesare, Mark Lycett, Robert Macredie, 2006 Annotation  
This work provides a comprehensive overview of research and practical issues relating to component-based information systems (CBIS). Spanning the organizational, developmental, and technical aspects of the subject, the original research included here provides fresh insights into successful CBIS technology and application, including the selection and trading of commercial off-the shelf products (COTS).

**The Development of Component-based Information Systems** Sergio de Cesare, Mark Geoffrey Lycett, Robert Macredie, 2015-05-15 This work provides a comprehensive overview of research and practical issues relating to component-based development information systems (CBIS). Spanning the organizational, developmental, and technical aspects of the subject, the original research included here provides fresh insights into successful CBIS technology and application. Part I covers component-based development methodologies and system architectures. Part II analyzes different aspects of managing component-based development. Part III investigates component-based development versus commercial off-the-shelf products (COTS), including the selection and trading of COTS products.

System Components Information Center Marvin G. Toll, 1963  
This report describes a proposed information transfer program for the selection and approval of components used in Air Force systems. It is intended for use by designers and also by the management group approving what the designers recommend. A method is presented showing how technical characteristics are used as the basis for item selection. When a complete characteristic description is determined, an established index code substitutes numbers for the particular words thus permitting rapid machine search and retrieval. The program employs 1000-ft microfilm facilities for storage and retrieval. It features technical

summaries of engineering data as the output for quick determination as to whether the selected items satisfy the requirement.

Declarative Logic-Programming Components for Information Agents Michael Fink, 2002-12-30 Inhaltsangabe: Abstract: At present, the World Wide Web faces several problems regarding the search for specific information, arising, on the one hand, from the vast number of information sources available, and, on the other hand, from their intrinsic heterogeneity. A promising approach for solving the complex problems emerging in this context is the use of information agents in a multi-agent environment, which cooperatively solve advanced information-retrieval problems. An intelligent information agent provides advanced capabilities resorting to some form of logical reasoning, based on ad-hoc-knowledge about the task in question and on background knowledge of the domain, suitably represented in a knowledge base. In this thesis, our interest is in the role which some methods from the field of declarative logic programming can play in the realization of reasoning capabilities for intelligent information agents. We consider the task of updating extended logic programs (ELPs), since, in order to ensure adaptivity, an agent's knowledge base is subject to change. To this end, we develop update agents, which follow a declarative update policy and are reimplemented in the IMPACT agent environment. The proposed update agents adhere to a clear semantics and are able to deal with incomplete or inconsistent information in an appropriate way. Furthermore, we introduce a framework for reasoning about evolving knowledgebases, which are represented as ELPs and maintained by an update policy. We describe a formal model which captures various update approaches, and define a logical language for expressing properties of evolving knowledge bases. We further investigate these mantical properties of knowledge states with respect to reasoning. In particular, we describe finitary characterizations of the

knowledge evolution, and derive complexity results for our framework. Finally, we consider a particular problem of information agents, namely information source selection, and develop an intelligent site-selection agent. We use ELPs for representing relevant knowledge and for declarative query analysis and query abstraction. We define syntax and semantics of declarative site-selection programs, making use of advanced methods from answer set programming for priority handling and quantitative reasoning. A site selection component is implemented on top of the DLV<sub>KR</sub> system and its plp front-end for prioritized ELPs. We report experimental results for this implementation, [...]

*Deriving Trust Supporting Components for Ubiquitous Information Systems* Söllner, Matthias, 2014-01-01 Ubiquitous information systems (UIS) are proposed to represent a fundamental paradigm shift in information systems research. Despite the advantages of such systems, they also come with disadvantages, such as their increasing automation and opaqueness. When aiming to develop UIS that are readily adopted and used by their intended users, those disadvantages need to be addressed. A promising approach to overcome this challenge is fostering the users' trust in UIS. Matthias Söllner presents a method for deriving trust supporting components for UIS, based on existing insights from literature as well as a new theoretical approach on the formation of trust in UIS. The empirical evaluation of the method shows that the trust supporting components increase the users' trust as well as their intention to adopt a UIS. The book targets researchers, lecturers and students in information systems, business administration and human computer interaction. It also provides insights for practitioners who develop UIS.
