Mergers and Acquisitions in the Software Industry Karl Michael

Popp, 2013-08-21 For mergers and acquisitions in the software industry this book lays the foundation for successful due diligence. Based on methodological foundations, a business model driven approach for due diligence is presented. The key difference between this book and other due diligence books: this book focuses on a business model driven approach, M&A processes, M&A organization and software industry specifics. The book focuses on four goals. First, it focuses on creating a holistic view of acquisition targets using business models. Second, the book defines differences of the software industry to other industries. Third, the book tries to lay the foundation for standardization of due diligence activities. It also analyses the right setup for acquirers to successfully carry out acquisitions. Fourth, it elaborates on typical business models, business ecosystems and partnerships in the software industry. Many examples from real life due diligence activities and many hints make this book a valuable resource for business professionals in mergers and acquisitions in all industries.

Component-Based Software Engineering Grace A. Lewis, Iman Poernomo, Christine Hofmeister, 2009-06-18 The 2009 Symposium on Component-Based Software Engineering (CBSE 2009) was the 12th in a series of successful events that have grown into the main forum for industrial and academic experts to discuss component technology. Component-based software engineering (CBSE) has emerged as the underlying technology for the assembly of flexible software systems. In essence, CBSE is about composing computational building blocks to construct larger building blocks that fulfill client needs. Most software engineers are involved in some form of component-based development. Nonetheless, the implications of CBSE adoption are wide-reaching and its challenges grow in tandem with its uptake, continuing to inspire our scientific speculation. Component-based development necessarily involves elements of software architecture, modular software design, software verification, testing, configuration and deployment. This year's submissions represent a cross-section of CBSE - search that touches upon all these aspects. The theoretical foundations of component specification, composition, analysis, and verification continue to pose research challenges. What exactly constitutes an adequate

semantics for communication and composition so that bigger things can be built from smaller things? How can formal approaches facilitate predictable assembly through better analysis? We have grouped the proceedings into two sub-themes that deal with these issues: component models and communication and composition. At the same time, the world is changing.

Arbitration and the Constitution Peter B. Rutledge,2013 Arbitration has become an increasingly important mechanism for dispute resolution, both in the domestic and international setting. Despite its importance as a form of state-sanctioned dispute resolution, it has largely remained outside the spotlight of constitutional law. This landmark work represents one of the first attempts to synthesize the fields of arbitration law and constitutional law. Drawing on the author's extensive experience as a scholar in arbitration law who has lectured and studied around the world, the book offers unique insights into how arbitration law implicates issues such as separation of powers, federalism, and individual liberties.
