Multi-Threaded Object-Oriented MPI-Based Message Passing Interface Jean-Marc Adamo, 2012-12-06 Multi-Threaded Object-Oriented MPI-Based Message Passing Interface: The ARCH Library presents ARCH, a library built as an extension to MPI. ARCH relies on a small set of programming abstractions that allow the writing of well-structured multi-threaded parallel codes according to the object-oriented programming style. ARCH has been written with C++. The book describes the built-in classes, and illustrates their use through several template application cases in several fields of interest: Distributed Algorithms (global completion detection, distributed process serialization), Parallel Combinatorial Optimization (A* procedure), Parallel Image-Processing (segmentation by region growing). It shows how new application-level distributed data types - such as a distributed tree and a distributed graph - can be derived from the built-in classes. A feature of interest to readers is that both the library and the application codes used for illustration purposes are available via the Internet. The material can be downloaded for installation and personal parallel code development on the reader's computer system. ARCH can be run on Unix/Linux as well as Windows NT-based platforms. Current installations include the IBM-SP2, the CRAY-T3E, the Intel Paragon, PC-networks under Linux or Windows NT. Multi-Threaded Object-Oriented MPI-Based Message Passing Interface: The ARCH Library is aimed at scientists who need to implement parallel/distributed algorithms requiring complicated local and/or distributed control structures. It can also benefit parallel/distributed program developers who wish to write codes in the object-oriented style. The author has been using ARCH for several years as a medium to teach parallel and network programming. Teachers can employ the library for the same purpose while students can use it for training. Although ARCH has been used so far in an academic environment, it will be an effective tool for professionals as well. Multi-Threaded Object-Oriented MPI-Based Message Passing Interface: The ARCH Library is suitable as a secondary text for a graduate level course on Data Communications and Networks, Programming Languages, Algorithms and Computational Theory and Distributed Computing and as a reference for researchers and practitioners in industry.

Permutations with Interval Restrictions Olena Bormashenko, 2011 This thesis studies the problem of the random transposition walk on permutations with interval restrictions. The mixing time of this Markov chain is explored, and a number of different cases are considered. For the case of bounded interval restrictions, a polynomial bound for the mixing time is achieved. For a specific example of bounded interval restrictions called Fibonacci permutations, the correct order of the mixing time is derived. An example of a family of interval restriction matrices for which the random walk mixes in exponential time is provided, showing that the walk in general does not mix in polynomial time. The case of one-sided interval restrictions is also studied, and cut-off is shown for a large class of one-sided interval restriction matrices. Furthermore, examples are provided in which chi-squared cut-off occurs, while total variation mixing occurs significantly earlier without cut-off. Finally, a coupling argument showing the correct order mixing time for the random transposition walk on the whole symmetric group is presented. This is achieved via projection to conjugacy classes and then a path coupling argument.
