Text Technologies Elaine Treharne, Claude Willan, 2020 This coursebook examines the material history of human communication, allowing students and teachers to examine how communication's production, form, materiality, and reception are crucial to our interpretations of culture, history, and society.

Text and Technology Mona Baker, Gill Francis, Elena Tognini-Bonelli, 1993-01-01 Text and Technology focuses on three major areas of modern linguistics: discourse analysis, corpus-driven analysis of language, and computational linguistics. The volume starts off with a description of the various British traditions in text analysis by Michael Stubbs. The first section Spoken and Written Discourse contains contributions by Martin Warren, Mohd Dahan Hazadiah., Amy B.M. Tsui, Anna Mauranen and Susan Hunston. The next section on corpus-driven analysis Corpus Studies: Theory and Practice contains contributions by Gill Francis, Bill Louw, Allan Partington, Elena Tognini-Bonelli. The contributions in this section by Kirsten Malmkjaer and Mona Baker deal specifically with translated text. The final third section Text and Technology: Computational Tools has contributions by David Coniam, Jeremy Clear, Junsaku Nakamura, Geoff Barnbrook and Margaret Allen. In spite of the specialised nature of the topics discussed and the level of sophistication with which these topics are handled, the papers are written in a clear and accessible style and will therefore be of interest to seasoned scholars and students alike. An extensive index further enhances the value of this collection as a reference point for many of the issues that currently lie at the heart of modern linguistics enquiry

Technology: Text R. Thomas Wright, 2000 This new edition of Technology presents an exciting view of technological systems. It explores how technology is designed and how it is used to create products and structures through manufacturing and construction systems, convey information and ideas through communication systems, move people and cargo using transportation systems, and apply energy to meet human needs. The impacts of technology from personal and societal views are also discussed.

Text Technologies Elaine Treharne, Claude Willan, 2019-11-26 The field of text technologies is a capacious analytical framework that focuses on all textual records throughout human history, from the earliest periods of traceable communication—perhaps as early as 60,000 BCE—to the present day. At its core, it examines the material history of communication: what constitutes a text, the purposes for which it is intended, how it functions, and the social ends that it serves. This coursebook can be used to support any pedagogical or research activities in text technologies, the history of the book, the history of information, and textually based work in the digital humanities. Through careful explanations of the field, examinations of terminology and themes, and illustrated case studies of diverse texts—from the Cyrus cylinder to the Eagles' Hotel California—Elaine Treharne and Claude Willan offer a clear yet nuanced overview of how humans convey meaning. Text Technologies will enable students and teachers to generate multiple lines of inquiry into how communication—its production, form and materiality, and reception—is crucial to any interpretation of culture, history, and society.

The Technology of Text David H. Jonassen, 1982 Abstract: Techniques for designing and developing text materials are described and elaborated for text development technologists. This book focuses on 2 broad categories of techniques for structuring textual materials, termed implicit (e.g.: discourse analysis, elaboration theory) and explicit (e.g.: algorithms, tables, diagrams) techniques. Implicit techniques are concerned with the structure of the content and sequencing of the message; explicit techniques display the structure of the message. The 4 sections of the book address; implicit communication techniques; explicit textual design; specific design problems; and how individuals differentially interact with text materials, ranging from printed matter to television

projections. (wz).

An Introduction to Text-to-Speech Synthesis Thierry Dutoit, 2013-12-01 This is the first book to treat two areas of speech synthesis: natural language processing and the inherent problems it presents for speech synthesis; and digital signal processing, with an emphasis on the concatenative approach. The text guides the reader through the material in a step-by-step easy-to-follow way. The book will be of interest to researchers and students in phonetics and speech communication, in both academia and industry.

Using Technologies for Creative-Text Translation James Luke Hadley, Kristiina Taivalkoski-Shilov, Carlos S. C. Teixeira, Antonio Toral, 2022-08-11 This collection reflects on the state of the art of research into the use of translation technologies in the translation of creative texts, encompassing literary texts but also extending beyond to cultural texts, and charts their development and paths for further research. Bringing together perspectives from scholars across the discipline, the book considers recent trends and developments in technology that have spurred growing interest in the use of computer-aided translation (CAT) and machine translation (MT) tools in literary translation. Chapters examine the relationships between translators and these tools—the extent to which they already use such technologies, the challenges they face, and prevailing attitudes towards these tools—as well as the ethical implications of such technologies in translation practice. The volume gives special focus to drawing on examples with and beyond traditional literary genres to look to these technologies' use in working with the larger group of creative texts, setting the stage for many future research opportunities. The book will be of particular interest to students and scholars in translation studies, especially those with an interest in literary translation, translation technology, translation practice, and translation ethics. Chapters 2 & 3 of this book are freely available as a downloadable Open Access PDF under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license available at <http://www.taylorfrancis.com>

Emerging Technologies of Text Mining: Techniques and Applications do Prado, Hercules Antonio, Ferneda, Edilson, 2007-10-31 This book provides the most recent technical information related to the computational models of the text mining process, discussing techniques within the realms of classification, association analysis, information extraction, and clustering. Offering an innovative approach to the utilization of textual information mining to maximize competitive advantage, it will provide libraries with the defining reference on this topic--Provided by publisher.

Talk, Text and Technology Inge Kral, 2012-07-26 Talk, Text and Technology is an ethnography of language, learning and literacy in remote Indigenous Australia. This study traces one Indigenous group from the introduction of alphabetic literacy in the 1930s to the recent arrival of digital literacies and new media. This innovative work examines changing social, cultural and linguistic practices across the generations and addresses the implications for language and literacy socialisation.

Together with Technology Jason Swarts, 2008 This book examines the complex roles that texts serve as parts of an organizational cognitive infrastructure. Texts make knowledge and experience tangible and durable. They help shape interactions between people. As professions have become more writing-centered in recent decades, many organizations have instituted writing review practices to help newcomers produce better writing and thus become more effective organizational citizens. Dr. Swarts examines those writing review practices and questions whether available

supportive technologies adequately prepare professional writers and professionals who write to appreciate the complex functions their texts serve. He reports on a study of the impact of two technologies (paper text and textual replay) on writing review. Unlike paper, which presents texts in a static form, textual replay presents texts as the products of writing practices. Textual replay records onscreen writing activity and creates a video that writers and reviewers use to supplement their discussion of revisions.

Researching Language, Text and Technology in Translation Tengku Sepora Tengku Mahadi, 2022-11-03 With the intention to show to the world the rigor of translation research, *Researching Language, Text and Technology in Translation* came forward with a collection of recent translation studies focusing on the aspects of language, text and technology in relation to translation. There is a total of seven studies, with the first chapter presenting the validity of translation research, while the rest portraying many different topics such as the difference between human and machine translation when translating the memoir of Tun Dr. Mahathir Mohamad, the translation of cultural humor for animated comedies, a look into the colonial perspective when it comes to translating literature from the east and various other topics that are both interesting and bring many different cultures around the world into view. This book can benefit academics, students (particularly research and graduate students), translators and those who are interested in language and translation. It is hoped that its casual yet educational content can open minds and stimulate ideas among its readers, especially in the terms of translation, and of how it connects the world together.

Handbook of Research on Text and Web Mining Technologies Song, Min, Brook Wu, Yi-Fang, 2008-09-30 Examines recent advances and surveys of applications in text and web mining which should be of interest to researchers and end-users alike.

Text Entry Systems I. Scott MacKenzie, Kumiko Tanaka-Ishii, 2010-07-28 *Text Entry Systems* covers different aspects of text entry systems and offers prospective researchers and developers global guidelines for conducting research on text entry, in terms of design strategy, evaluation methodology, and requirements; a discussion of the history and current state of the art of entry systems; and specific guidelines for designing entry systems for a specific target, depending on devices, modalities, language, and different physical conditions of users. Text entry has never been so important as it is today. This is in large part due to the phenomenal, relatively recent success of mobile computing, text messaging on mobile phones, and the proliferation of small devices like the Blackberry and Palm Pilot. Compared with the recent past, when text entry was primarily through the standard qwerty keyboard, people today use a diverse array of devices with the number and variety of such devices ever increasing. The variety is not just in the devices, but also in the technologies used: entry modalities have become more varied and include speech recognition and synthesis, handwriting recognition, and even eye-tracking using image processing on web-cams. Statistical language modeling has advanced greatly in the past ten years and so therein is potential to facilitate and improve text entry — increasingly, the way people communicate. This book covers different aspects of text entry systems and offers prospective researchers and developers Global guidelines for conducting research on text entry, in terms of design strategy, evaluation methodology, and requirements History and current state of the art of entry systems, including coverage of recent research topics Specific guidelines for designing entry systems for a specific target, depending on devices, modalities, language, and different physical conditions of users

Human Development and Interaction in the Age of Ubiquitous Technology Rahman, Hakikur, 2016-06-27 The human condition is affected by numerous factors in modern society. In modern times, technology is so integrated into culture that it has become necessary to perform even daily functions. *Human Development and Interaction in the Age of Ubiquitous Technology* is an authoritative reference source for the latest scholarly research on the widespread integration of technological innovations around the globe and examines how human-computer interaction affects various aspects of people's lives. Featuring emergent research from theoretical perspectives and case studies, this book is ideally designed for professionals, students, practitioners, and

academicians.

Technology Management Norma Harrison, Danny Samson, 2002 A broad and diverse perspective is presented from various industries throughout the world. This approach provides students better understanding of key success factors for implementation of technology projects. Students see first-hand how to implement technological change by examining the processes, routines, organizational structure, cultural and leadership factors that relate to introducing and implementing successful new technology. The most exciting and beneficial aspect of this text is its authorship, the cases were written by leading experts from top institutions around the world including USA, UK, Germany, Japan, Korea, Australia and Canada.--Pub. desc.

Talk, Text and Technology Inge Kral, 2012-07-26 Talk, Text and Technology is an ethnographic exploration of language, learning and literacy in remote Indigenous Australia. This unique work traces the historical transformation of one Indigenous group across four generations. The manner in which each generation adopts, adapts and incorporates new innovations and technologies into social practice and cultural processes is illuminated - from first mission contact and the introduction of literacy in the 1930s to youth media practices today. This book examines social, cultural and linguistic practices and addresses the implications for language and literacy socialisation.

Copyright: Sacred Text, Technology, and the DMCA David Nimmer, 2003-01-01 This anthology brings together over a dozen articles published by David Nimmer over the past decade regarding copyright, together with updated commentary weaving together the various threads running through them. The unifying theme running through the work is the need to reconcile standards in order to protect that most ethereal creation of mankind: the written word. From that unique vantage point the discussion delves into the religious roots and sacred character of the act of creation. Religion and copyright are brought into resonance as issues from one field are deployed to illuminate those in the other. Given its culminating focus on the Digital Millennium Copyright Act this work of necessity drills deeply into current advances in technology, notably the dissemination of works over the internet. The religious perspective shines an unexpected light onto those issues as well.
