Middleware 2005 Gustavo Alonso,2005-11-19 This book constitutes the refereed proceedings of the ACM/IFIP/USENIX International Conference on Distributed Systems Platforms, Middleware 2005, held in Grenoble, France in November/December 2005. The 18 revised full papers and 6 short papers presented were carefully reviewed and selected from 112 submissions. The papers are organized in topical sections on security and privacy, peer-to-peer computing, XML and service discovery, distribution and real time processing, publish/subscribe systems and content distribution, and middleware architecture.

Document Analysis Systems VI Simone Marinai,Andreas Dengel,2004-08-26 This volume contains papers selected for presentation at the 6th IAPR Workshop on Document Analysis Systems (DAS 2004) held during September 8–10, 2004 at the University of Florence, Italy. Several papers represent the state of the art in a broad range of “traditional” topics such as layout analysis, applications to graphics recognition, and handwritten documents. Other contributions address the description of complete working systems, which is one of the strengths of this workshop. Some papers extend the application domains to other media, like the processing of Internet documents. The peculiarity of this 6th workshop was the large number of papers related to digital libraries and to the processing of historical documents, a taste which frequently requires the analysis of color documents. A total of 17 papers are associated with these topics, whereas two years ago (in DAS 2002) only a couple of papers dealt with these problems. In our view there are three main reasons for this new wave in the DAS community. From the scientific point of view, several research fields reached a thorough knowledge of techniques and problems that can be effectively solved, and this expertise can now be applied to new domains. Another incentive has been provided by several research projects funded by the EC and the NSF on topics related to digital libraries.

Repeating and Multi-Fire Weapons Gerald Prenderghast,2018-04-04 From the very earliest days of organized warfare, combatants have wanted to develop weapons with more firepower. This has inevitably led to a wide variety of repeating weapons, capable of a degree of sustained fire without reloading. Based largely upon new research, this book explores the history of repeating and multi-fire weapons, beginning with the Chinese repeating crossbow in the 4th century BCE, and ending with the world's most common firearm, the Kalashnikov AK-47. The author describes the potency of the machine gun in World War I, the development of the semiautomatic pistol and the role of the submachine gun in improving the effectiveness of the infantryman.

**Advances in Automatic Text Summarization** Inderjeet Mani,Mark T. Maybury,1999 ntil now there has been no state-of-the-art collection of the most

important writings in automatic text summarization. This book presents the key developments in the field in an integrated framework and suggests future research areas. With the rapid growth of the World Wide Web and electronic information services, information is becoming available on-line at an incredible rate. One result is the oft-decried information overload. No one has time to read everything, yet we often have to make critical decisions based on what we are able to assimilate. The technology of automatic text summarization is becoming indispensable for dealing with this problem. Text summarization is the process of distilling the most important information from a source to produce an abridged version for a particular user or task. Until now there has been no state-of-the-art collection of the most important writings in automatic text summarization. This book presents the key developments in the field in an integrated framework and suggests future research areas. The book is organized into six sections: Classical Approaches, Corpus-Based Approaches, Exploiting Discourse Structure, Knowledge-Rich Approaches, Evaluation Methods, and New Summarization Problem Areas. The Discourse of Online Sportscasting Jan Chovanec, 2018-12-15 This book offers the first comprehensive linguistic analysis of live text commentary, one of the most innovative online genres of modern news media. The study focuses on written sports commentaries in online newspapers that enable partial real-time audience involvement in the media text. Adopting an approach from interactional pragmatics, the book identifies the genre's characteristic micro-linguistic features as well as its unique narrative structure. Live text commentary is shown to be a hybrid and multimodal text format – an internally complex form of

media communication that combines elements of live spoken broadcasting, blogging, informal conversation and online chat. It aims to inform as well as entertain the audience: by using humour, banter and real or staged dialogue it seeks to create a sense of community among its readers – sports fans. The book will be of interest to many scholars in linguistic pragmatics, discourse analysis and social sciences, as well as to all others interested in modern online genres, news media and sports discourse.
