Visionary Manufacturing Challenges for 2020 National Research Council,Division on Engineering and Physical Sciences,Board on Manufacturing and Engineering Design,Commission on Engineering and Technical Systems,Committee on Visionary Manufacturing Challenges,1998-12-18 Manufacturing will unquestionably be a very different enterprise in 2020 from what it is today. This book presents an exciting picture of the profitable and productive potential of manufacturing two decades hence. This book takes an international view of future manufacturing that considers the leaps and bounds of technological innovation and the blurring of the lines between the manufacturing and service industries. The authors identify ten strategic technology areas as the most important for research and development and they recommend ways to address crosscutting questions. Representing a variety of industries, the authors identify six grand challenges that must be overcome for their vision to be realized, including the human/technology interface, environmental concerns, and miniaturization. A host of issues are discussed that will push and pull at manufacturing over the next 20 years: the changing workforce, the changing consumer, the rise of bio- and nanotechnology, the prospects for waste-free processing, simulation and modeling as design tools, shifts in global competition, and much more. The information and analyses in this book will be vitally important to everyone concerned about the future of manufacturing: policymakers, executives, design and engineering professionals, researchers, faculty, and students.

The Feeling of Being Loved Raviraj Mishra,2020-01-16 Shruti, a software engineer has a wish to be truly loved by someone. In her journey, she has two companions - Meera and her talking rational mind. Her idea of love and respect guides her to take some strong decisions. The feeling of being loved is the story of those rational decisions taken by a distracted mind to make things alright.

Computer-aided Tolerancing Fumihiko Kimura,2012-12-06 Theory and practice of tolerances are very important for designing and manufacturing engineering artifacts on a rational basis. Tolerance specifies a degree of discrepancy between an idealized object and its physical realization. Such discrepancy inevitably comes into our product realization processes because of practical cost consideration or our inability to fully control manufacturing processes. Major product and production characteristics which are affected by tolerances are product quality and cost. For achieving high precision machines tight tolerance specification is necessary, but this will normally increase product cost. In order to optimally compromise the conflicting requirements of quality and cost, it is essential to take into account of the total product life cycle throughout product planning, design, manufacturing, maintenance and recycling. For example, in order to construct durable products under severe working conditions, low sensitivity of product functionality with respect to tolerances is required. In future, re-use of components or parts will become important, and tolerance synthesis with respect to this aspect will be an interesting future research topics.

Hydraulic Modelling: An Introduction Pavel Novak,Vincent Guinot,Alan Jeffrey,Dominic E. Reeve,2018-10-24 Modelling forms a vital part of all engineering design, yet many hydraulic engineers are not fully aware of the assumptions they make. These assumptions can have important consequences when choosing the best model to inform design decisions. Considering the advantages and limitations of both physical and mathematical methods, this book will help you identify the most appropriate form of analysis for the hydraulic engineering application in question. All models require the knowledge of their background, good data and careful interpretation and so this book also provides guidance on the range of accuracy to be expected of the model simulations and how they should be related to the prototype. Applications to models include: open channel systems closed conduit flows storm drainage systems estuaries coastal and nearshore structures hydraulic structures. This an invaluable guide for students and professionals.
