The Carbon Cycle T. M. L. Wigley,D. S. Schimel,2005-08-22 Reducing carbon dioxide (CO₂) emissions is imperative to stabilizing our future climate. Our ability to reduce these emissions combined with an understanding of how much fossil-fuel-derived CO₂ the oceans and plants can absorb is central to mitigating climate change. In *The Carbon Cycle*, leading scientists examine how atmospheric carbon dioxide concentrations have changed in the past and how this may affect the concentrations in the future. They look at the carbon budget and the missing sink for carbon dioxide. They offer approaches to modeling the carbon cycle, providing mathematical tools for predicting future levels of carbon dioxide. This comprehensive text incorporates findings from the recent IPCC reports. New insights, and a convergence of ideas and views across several disciplines make this book an important contribution to the global change literature.

IMF Staff papers International Monetary Fund. Research Dept.,1966-01-01 From the Foreword to the first issue: "Among the responsibilities of the International Monetary Fund, as set forth in the Articles of Agreement, is the obligation to fact as a center for the collection and exchange of information on monetary and financial problems,' and thereby to facilitate 'the preparation of studies designed to assist members in developing policies which further the purposes of the Fund.' The publications of the Fund are one way in which this responsibility is discharged. "Through the publication of Staff Papers, the Fund is making available some of the work of members of its staff. The Fund believes that these papers will be found helpful by government officials, by professional economists, and by others concerned with monetary and financial problems. Much of what is now presented is quite provisional. On some international monetary problems, final and definitive views are scarcely to be expected in the near future, and several alternative, or even conflicting, approaches may profitably be explored. The views presented in these papers are not, therefore, to be interpreted as necessarily indicating the position of the Executive Board or of the officials of the Fund."

Glial Plasticity in Depression João F. Oliveira,Catarina A. Gomes,Sandra H. Vaz,Nuno Sousa,Luisa Pinto,2016-10-24 Major depression is a highly prevalent disorder that poses a significant social burden in society nowadays. The pathophysiology of this disease is still poorly understood but growing evidence suggests that impaired neuron and glial plasticity may be a key underlying mechanism for the precipitation of the disorder. One of the most surprising findings in this field was the involvement of glial cells in the pathophysiology of major depression and in the action of antidepressants, namely in mechanisms related with adult neurogenesis imbalances

or dendritic arborization impairments. In particular, several works refer to alterations in the morphology and numbers of astrocytes, microglia and oligodendrocytes in the context of depression in human patients or animal models of depression. These observations were linked to functional evidences and suggested to underlie the pathophysiology of depression. Among others, these include impairments in the cross-talk between glia and neurons, changes in the level of neurotransmitter or immunoactive substances, myelination status, synapse formation, maintenance, or elimination. In addition to the implication of glia in the pathophysiology of depression, a number of studies is ascribing glia pathways to classically accepted antidepressant mechanisms. Therefore, it is noteworthy to elucidate the role of glia in the effect provided by antidepressant treatment in order to better understand secondary effects and elucidate alternative targets for treatment.

Fairs and Markets in the Roman Empire L. de Ligt, 1993 Periodic markets are institutions of crucial importance in all pre-industrial economies. Yet the subject has been given little attention by Roman historians. The aim of this book is to remedy this state of affairs through an empire-wide study of annual, bi-annual, monthly and 'weekly' markets. The method used involves the interpretation of the ancient evidence in terms of economic and anthropo-logical theory and against the background of comparative data. Dr de Ligt starts by demonstrating the continued importance of local and regional fairs throughout the imperial period. Special attention is devoted to the role of both annual fairs and high-frequency periodic markets in the rural economy. In the second half of the book the scope of the discussion is extended to social and political aspects. Finally, the book addresses such topics as urban resistance towards neighbouring rural markets and the widespread practice of waiving customs duties for the duration of largescale religious festivals.
